THE SECURITY INDUSTRY'S PRODUCT GUIDE

SARGENT® Profile Series v.N2 Lock with Aperio™ Technology

The SARGENT® Profile Series v.N2 lock with Aperio™ technology provides an innovative new approach to online access control. Aperio is a global wireless technology from ASSA ABLOY that makes it easy and cost-effective to expand the number of doors that can be monitored with currently installed access control panels and systems. It utilizes short-distance wireless communication between the lock and a communications hub mounted directly above the door to connect to an online access control system. This eliminates the greatest cost and inconvenience associated with traditional access control — the wiring at the door — without the hassle of complex site surveys.

The Profile Series v.N2 lock combines integrated access control components with ANSI/BHMA Grade 1 hardware and is available in bored lock, mortise lock, and exit device configurations. Real-time authentication, door status changes and configurable alarm notifications allow for immediate response to events at the door.

The v.N2 Aperio-enabled lock requires minimal field configuration and ensures quick, easy wireless deployments. Wireless communication (IEEE 802.15.4) between the v.N2 lock and Aperio hub uses AES 128 encryption to ensure the highest level of security. The v.N2 also supports a variety of 13.56 MHz contactless credentials, including HID® iCLASS® with full authentication in all formats. Additionally, Aperio is the broadest global wireless locking solution, making it ideal for global companies deploying a standard infrastructure across multiple locations.

AXIS M50 PTZ Dome Network Cameras

The AXIS M50 PTZ Dome Network Camera Series is the world's smallest HDTV pan/tilt/zoom camera offering security directors and business managers a highly discreet and affordable solution for monitoring indoor areas, such as retail stores, banks, hotels, office lobbies, restaurants and warehouses.

With a sleek and compact design, AXIS M50 cameras — which include AXIS M5013 and AXIS M5014 PTZ Dome Network Cameras — are only 5.1" wide and 2.2" high, enabling high-quality 360° surveillance (±180° pan, 90° tilt and 3x digital zoom). AXIS M5014 features HDTV 720p resolution while AXIS M5013 offers SVGA video. As a complement to its intelligent motion detection capabilities, a built-in microphone enables audio detection

to monitor for unusual noises during off-hours to trigger a security alarm.

The PTZ dome cameras are easy to install and can cover an area of up to 4,300 sq. ft. With an IP51 rating, the cameras are dustproof and protected from dripping water and are powered using Power over Ethernet (PoE IEEE 802.3af) when connected to a PoE switch to carry power, video and PTZ controls with one network cable. AXIS M50 Series can deliver multiple, individually configurable H.264 and Motion JPEG video streams simultaneously.

AXIS M50 Series starts at \$499 MSRP and is supported by AXIS Camera Station video management software, the industry's largest base of surveillance applications through Axis' Application Development Partner program.

450mA Latch Retraction/Dogging Kits

With only 450mA inrush, SDC's UL approved QUIET DUO™ LR100 series field retrofit kits provide simultaneous electric latch retraction and dogging with automatic retriggering for Von Duprin, Sargent, Yale, Corbin Russwin, Dor-O-Matic, Precision and Adams Rite mechanical exit devices. They eliminate costly exit device replacement while providing access control and sustained dogging (pushpad depression) for sustained push-pull applications. The QUIET DUO™ utilizes low-current motorized operation compared to high-inrush solenoids. The simultaneous pushpad depression provides operation for both sustained dogging and momentary access control applications. Latch and pushpad status are optional.

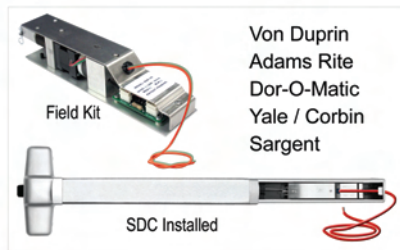

With only 450mA inrush, 180ma continuous current at 24VDC, the need for costly special power supplies is eliminated and enables longer, smaller gauge wire runs. The SDC 602RF 1-Amp power supply with emergency release input powers two devices and latches doors in an emergency. EMC-2, two-station sequencers required for automatic doors only.

The SDC EMC-2 door sequencer is available for use with one or two automatic doors. Door sequencers are not required for pairs of manual doors.

Retrofits Von Duprin Exit Devices without Removing from the door.

The QUIET DUO™ LR100VDK field retrofit kit is UL Recognized for Von Duprin 22, 33/35, 98/99 non-fire rated exit devices. The SDC factory installed LR100VD is UL Listed for fire rated and non-fire rated models.

The Universal 4850 – 4 Sizes in 1 Box

The Universal 4850 surface mounted electric strike for rim panic devices from Trine Access Technology has the flexibility you need when you get to a job site. The interaction between a lock, door, and frame is different every time, and the 4850 offers four sizes in one box to make installation a breeze.

With an open cavity, the 4850 can take up to a 1" throw, which allows it to accept more rim panic devices than the competition. Built-in electronics automatically allow for 11-28 VDC with surge and kickback protection, which enhances the strikes' flexibility.

Trine's patented six-pin anchoring system (that's eight total contact points) provide additional stability and our spacer plate acts as a template for an easy installation.

The unit is field selectable fail safe/fail secure and can be used in new or replacement installations in wood, aluminum, and metal door frames. The 4850 can be ordered in six architectural finishes.

New for the 4850 is Latchbolt Monitoring (available in June 2011) which utilizes optical sensors for a more reliable installation.

ACCESS CONTROL

WinDSX AES-256 Encryption Software

The WinDSX AES-256 encryption software from DSX Access Systems contains government approved AES-256 bit encryption technology that can be implemented system-wide.

Encryption capabilities are built into the software and every field controller. For example, communications to each Location in WinDSX AES-256 can optionally be encrypted with a unique encryption key assigned by the customer for communicating with that Location's field controllers.

This is but another tool for DSX Integrators in meeting government requirements and FIPS com-

pliance just like the recently achieved UL 1076 listing.

Once purchased and enabled in the DSX Features Key, there is an Encryption Key that can be implemented to encrypt communications between the Comm Server and the Workstations.

There is also an encryption key that can be implemented optionally and individually for each location. Once communication is encrypted from the Comm Server to the Master Controller, the encryption is propagated to all controllers in that location.

Corbin Russwin® Access 800® W11 Intelligent WiFi Access Control

The Access 800 W11 from Corbin Russwin is ideal for bringing access control to areas of a building that are cost-prohibitive or challenging to wire. It is a complete solution, integrating all components — including ANSI/BHMA Grade 1 Corbin Russwin hardware, proximity reader and door monitoring — into a single device. The Access 800 W11's open architecture design simplifies integration with any access control system, and because there are no wires to run, it significantly reduces installation and labor costs.

Using an existing IEEE 802.11 b/g WiFi network and HID 125 kHz-proximity credentials, the Access 800 W11 offers complete access control features. Capabilities include real-time alarms and local decision-making to ensure operation regardless of network status. It also features advanced data security with standard encryption techniques and is available with keypad for two-factor authentication.

The Access 800 W11 is offered in ANSI/BHMA Grade 1 cylindrical locks,

mortise locks and exit devices with a variety of finishes and lever styles — standard, Muséo® and Vineyard™ — for a consistent design aesthetic throughout a facility. It uses standard AA batteries for easy, cost-effective deployment and maintenance.

Trilogy® Electronic Access Control Locks

Alarm Lock Systems Trilogy® line enables security professionals securing buildings of all kinds to more cost-effectively add dependable wireless access control a door at a time with a field-proven access solution and with a consistent model for every door type in a facility.

Trilogy® electronic access control locks include original standalone and new wireless networking Trilogy Networkx access locks, featuring global lockdown in seconds and eliminates door-to-door programming and audit trail queries by communicating wirelessly via ethernet or 802.11.

All Trilogy locks feature the same rugged dependability, and tool-free keypad programming, with cylindrical models boasting Grade 1 BHMA certification.

Its new Alarm Lock Networkx™ Prox ID and PIN code keypads and NetPanel 2-door access controller provide a networked wireless keypad solution for magnetic locks, strikes and electrified exit devices. Networkx Keypads offer global functions and

networked bidirectional communications that eliminate the need to physically go to the keypads for program changes such as authorized users, event log retrieval and more.

The flexible new system shares the same programming, database and functionality, plus, PIN/Prox model, with built in HID Prox. The ID Card reader still uses Alarm Lock's free Windows-based software, and both standalone and Networkx models can share one common database.

ACCESS CONTROL

SARGENT® Passport 1000 Campus Access Control Solution

Designed specifically for campus environments, the Passport 1000 Series from SARGENT provides a "one card" solution, using magnetic stripe, proximity card reader and PIN code technologies for customized access to facilities.

Available in WiFi and PoE versions, these products use ASSA ABLOY's PERSONA Campus™ software or approved third-party software to integrate seamlessly into existing enterprise, transactional and housing systems, providing comprehensive, reliable access control. The Passport 1000 locks take advantage of existing network infrastructure to provide advanced security and easier, more cost-effective installations.

The Passport 1000 P1 Power over Ethernet (PoE) solution offers simple, secure, online campus access control. An online ANSI/BHMA Grade 1 lock utilizing PoE technology,

the Passport 1000 P1 connects to the building's Ethernet network and can make decisions locally. Open standard cable and PoE-enabled equipment allows easy and cost-effective installations. Real-time door status monitoring and lockdown capable, the P1 is available in exit device, mortise and cylindrical lock configurations.

The Passport 1000 P2 intelligent WiFi lock provides access control for hard-to-secure locations. Using an 802.11b/g WiFi network, the Passport 1000 P2 ANSI/BHMA Grade 1 lock connects as frequently as the user specifies to maintain its local list of up to 2,400 users. Available in exit device, mortise and cylindrical lock configurations, it offers real-time door status monitoring and configurable alarm notifications.

SALTO AElement

AElement is a new RFID hotel lock from SALTO. Developed specifically for the hotel market, it provides a fully integrated, real-time security solution that enables you to combine your entire guest hospitality needs into one stylish, energy efficient and reliable wire-free locking system.

Easy to use and easy to install, it is a stunning piece of design that's packed with SALTO's new DNA

technology. It can control the security of the entire building from a single location, including granting access privileges to individual rooms and gathering audit trail data from every door in real time — all without leaving the front desk.

With AElement, all locks are designed to be wireless ready right out of the box — you just decide whether the function is activated or not.

Simply choose the mode of operation you want: "Wireless on-line" or "Wireless ready." If you choose "Wireless on-line," your locks are online and communicate in real-time with the server. This gives you real-time control over the entire building.

If you chose "Wireless ready," your locks communicate with the server daily on differed-time communication mode. Wireless ready locks can be "switched" to real-time "Wireless on-line mode" at any time. Just plug in the USB-sized RF communication antenna and you are ready to go.

GSM Access Reader

The Paxton Net2 Caller ID/GSM Access Control Reader allows you to open a door from anywhere using a mobile or landline phone as a credential — enabling access without a card. The last eight digits of the phone number are used as the credential in the access system without incurring any call charges. This is made possible through caller ID (CLID) technology. The GSM Reader can be used with an access controller for phone only, or can be combined with a proximity card reader so the user has an option of a local access card or their phone. The Caller ID/GSM reader means that you no longer need a credential or to be in front of the door to unlock it, so it is great for communal entrances, infrequently visited sites, car or truck vehicle gates, and even starting the air conditioner on the way into the office, to name a few. Just another innovative product from Paxton.

Biometric Access Control Reader

MiY-ID is Cogent's latest outdoor multi-purpose, multi-functional biometric access control reader. As new security standards emerge, companies are looking for a security product that meets current PACS standards for PIV, CAC, TWIC and others. Cogent's MiY-ID product allows them to meet current standards and easily conform to changing standards without having to replace their PACS readers.

With its ground-breaking "Make it Yours" application development platform, MiY-ID can virtually interface with any PACS and government credentials such as PIV, TWIC and CAC. The MiY-ID's core product foundation and framework allows third-party customization of almost any part of the product, leveraging future technologies as they are introduced.

MiY-ID is the first reader of its kind to allow users the ability to securely customize a PACS reader while still maintaining compliance, and without sacrificing GSA APL certifications. Cogent's SecurAPI has over 500 functions to cre-

ate various types of workflow with the existing hardware or third party hardware via the secure USB port.

The MiY-ID's outdoor design features an Ingress Protection Level (IP) 64 with built-in TLS encrypted Ethernet and PIV-approved matchers, scanners, and contact/contactless CHUID readers.

SARGENT® Harmony Series Online Integrated Wiegand Access Control

The SARGENT Harmony Series Online Integrated Wiegand Access Control Solution offers big features in a small, well-styled lock. SARGENT ANSI/BHMA Grade 1 hardware and integrated access control components are beautifully presented in the Harmony Series. Harmony is in tune with the aesthetic needs of the architect, and provides high security and ease of installation for the facility manager.

The Harmony Series has consolidated all standard access control components into the lock — including the card reader, door position switch and request-to-exit monitoring sensors. This dramatically reduces installation time and ensures a clean, streamlined appearance, maintaining the architectural integrity around the door.

Available in bored lock, mortise lock, and exit device configurations, the Harmony Series offers maximum safety with HID® 125 kHz prox or 13.56 MHz iCLASS® card readers and full monitoring capabilities. It provides a simple solution for access control

systems by using a direct Wiegand output, eliminating the need for an interface panel. An open architecture platform offers compatibility with all popular access control systems. Designed to blend into any environment flawlessly, the series is available with SARGENT Studio Collection decorative levers and 13 finishes.

Corbin Russwin® Access 700® Intelligent Campus Access Control

Access 700® locks offer comprehensive access control for campus housing and facilities. Designed specifically for campus environments, they provide a "one card" solution, using magnetic stripe, PIN code, and proximity or iCLASS® card reader technologies for customized access to facilities.

Available in WiFi and PoE versions, these products use ASSA ABLOY's PERSONA Campus™ software or approved third-party software to integrate seamlessly into existing enterprise, transactional, and housing systems, providing comprehensive, reliable access control. Corbin Russwin Access 700 locks use WiFi or PoE network infrastructure to connect to the access control system, offering advanced security and easier, more

cost-effective installations. The Access 700 PWI1 lockset is an intelligent WiFi lockset that is ideal for adding access control to areas of a building that would be too difficult or costly to wire. The Access 700 PIP1 intelligent Power over Ethernet (PoE) lockset offers full online access control, using the facility's Ethernet network. Standard network cabling provides

both power and data, simplifying installation and reducing costs.

The Access 700 PWI1 and PIP1 locks integrate all access control components into one device — ANSI Grade 1 quality lock or exit device, card reader, door position switch and Request-to-Exit sensor — and are available in mortise lock, cylindrical lock and exit device configurations.

ACCESS CONTROL

HES 4500 Series Heavy Duty, Fire-Rated, Low Profile Electric Strike

The HES 4500 is a low-profile electric strike designed for use in 2" UL 10C fire-rated frames with 1/2" drywall penetration. The unit features heavy-duty stainless steel construction and a unique keeper pin locking design that gives it strength to meet UL 10C 3-hour fire rating (in fail secure mode) and UL 1034 burglary resistant listing standards. The 4500 asserts its Grade 1 strength by offering static strength of 3,000 lbs, dynamic strength of 100 ft-lbs and more than 1 million cycles in durability in tests witnessed by a nationally recognized independent third-party standards organization.

The Universal 4850 – 4 Sizes in 1 Box

The Universal 4850 surface mounted electric strike for rim panic devices from Trine Access Technology has the flexibility you need when you get to a job site. The interaction between a lock, door, and frame is different every time, and the 4850 offers four sizes in one box to make installation a breeze.

With an open cavity, the 4850 can take up to a 1" throw, which allows it to accept more rim panic devices than the competition. Built-in electronics automatically allow for 11-28 VDC with surge and kickback protection, which enhances the strikes' flexibility.

Trine's patented six-pin anchoring system (that's eight total contact points) provide additional stability and our spacer plate acts as a template for an easy installation.

The unit is field selectable fail safe/fail secure and can be used in new or replacement installations in wood, aluminum, and metal door frames. The 4850 can be ordered in six architectural finishes.

New for the 4850 is Latchbolt Monitoring (available in June 2011) which

utilizes optical sensors for a more reliable installation.

SARGENT® Profile Series IP-Enabled Access Control Solutions

The SARGENT Profile Series v.S1 (PoE) and v.S2 (WiFi) IP-Enabled Locks take advantage of existing network infrastructure to provide advanced security and easier, more cost-effective installations. Available in exit device, mortise and cylindrical lock configurations, they offer reliable communication, advanced management capabilities, and real-time alarm notification.

The Profile Series v.S1 and v.S2 locks feature ANSI/BHMA Grade 1 hardware and are available with HID® 125 kHz proximity or 13.56 MHz iCLASS® technology, and optional keypad.

The SARGENT Profile Series v.S1 brings the power of the network to door hardware. It uses IEEE 802.3af Power over Ethernet (PoE)-enabled network infrastructure for both power and data and provides the same real-time communication as traditional access control. Non-proprietary cable, PoE switches, and midspans facilitate cost-effective installations.

The Profile Series v.S2 intelligent

WiFi locks offer the ability to extend the reach of your access control systems using a building's existing 802.11b/g WiFi infrastructure.

The v.S2 offers complete access control functionality and is ideal for locations where it would be difficult or cost-prohibitive to install a wired lock.

APX-3000 Outdoor AP/Bridge

The APX-3000 Outdoor AP/Bridge from Aaxeon Technologies has all the standard features found on an access point but also offers much more. It features a Wireless Distributed System (WDS) function that let's the unit act as a wireless LAN access point and repeater at the same time.

Users can use this function to develop large wireless networks in large areas like airports, hotels, schools, etc. Using WDS enables bridging networks between multiple areas where it is impossible to deploy network cable connections. The APX-3000 also has Station Mode, which lets network devices that only have wired Ethernet support access wireless LAN without

changing any of the device's original configurations. In addition, with its 1 watt radio, the APX-3000 can be used to bridge distances much greater than the typical access point with only a 100 mwatt radio.

Moreover, the APX-3000's metal enclosure is IP67 rated. Having an IP67 rated enclosure ensures that the unit will be protected from the elements day in and day out. It is rainproof and will protect against dust, ensuring the unit is reliable for everyday use.

The APX-3000 is a great solution for users looking to install a reliable high-powered outdoor access point.

VisionFrame Video Monitor Wall Systems

The versatile new VisionFrame™ Video Monitor Wall System provides heavy-duty structural support for monitors.

The system saves integrators valuable installation time with a simple effective design, and can be quickly and easily specified with the company's Middle Atlantic Designer™ 3D Layout software.

VisionFrame Systems can be designed with monitor height over 13 feet from the floor and with unlimited length, providing unmatched versatility. Available in both freestanding and desk mount configurations, VisionFrame systems are well suited for a variety of applications, including optimized viewing of larger and multiple screens simultaneously in security and other monitoring environments.

Middle Atlantic has designed every aspect of VisionFrame including its own custom extrusions and hard-

ware. "We weren't satisfied with the durability and functionality of extrusions currently on the market," said Middle Atlantic Application Engineer Dean Whelan. "We put a lot of thought into the role those pieces play in the system and designed our own custom extrusions to provide the strength that VisionFrame needs and to make installation much easier."

Making VisionFrame even easier to specify is Middle Atlantic's Designer 3D Layout Software. Designer enables users to quickly and easily create a VisionFrame Video Monitor Wall, ViewPoint console or desk layout with exceptional flexibility and high-quality graphics that provide a realistic depiction of the environment being designed. Designer software is available as a free download from www.middleatlantic.com.

The 3VR VIP S-Series

3VR introduces the newest product in its Video Intelligence Platform™ (VIP), the S-Series. It is the most compact and economical recorder in the 3VR portfolio. All 3VR solutions feature advanced search capabilities, state-of-the-art central management options and a comprehensive range of proven video analytics, such as facial surveillance and object detection that integrates seamlessly with third-party data sources like teller transaction, POS and access control systems.

The VIP S-Series includes:

RAID Storage Options and Field Replaceable Drives: With dual hot-swappable drives and optional RAID storage, the S-Series greatly reduces downtime and the cost of maintenance while providing redundancy.

Highest Quality Analog Video Capture Available: With all analog cameras able to record 4CIF at 30 frames per second, users have a greater ability to record and analyze high-quality video.

Easy Migration To IP Cameras: As a hybrid DVR, the S-Series supports a wide variety of IP cameras, allowing users to benefit from the latest IP technologies, including multi-megapixel cameras and 3VR Camera Virtualization.

Simple Integration to External Data Systems: 3VR correlates video with a growing universe of systems, such as point of sale, ATM, access control, transaction and other systems, allowing easy searches by transaction number, cashier, and customer ID.

VIP Analytics: The S-Series can be upgraded to run up to 4 channels of 3VR's video analytics, including people counting, license plate recognition and more.

Infrared Illuminators

Compact LIR Infrared illuminators incorporating high power Quasar LEDs from Rainbow CCTV are the ideal choice to improve nighttime performance of CCTV systems for short to long-range applications. The inherent low power consumption of the solid state LED array, results in ultra low running costs over the life of the lamp. With an average LED life well in excess of 10 years, the LIR series can provide huge energy and maintenance savings. Impact resistant and fully weather proof (IP67) with an attractive design, the integrated control features on the illuminator include telemetry input, power and photocell sensitivity adjust, and photocell following contact to switch D/N camera into night mode. The LIR Series is suitable for all low light installations up to 820 feet (250m).

EtherStretch

EtherStretch from Nitek can quickly turn any ordinary telecommunications cable (coax or UTP) into a high-speed network communication and PoE path. When operating over coaxial cable (RG59), distances of up to 500 meters (1,640 feet) can be achieved. The UTP version uses a four-pair UTP cable to communicate up to 600 meters. The EtherStretch system consists of a transmitter and a receiver set, which requires very little installation time and absolutely no set up or configuration. The transmitter and receiver are transparent to the network and have no IP or MAC addressing. Simply connect your network devices to the network ports of the transmitter and receiver along with existing cabling and the system begins communicating.

Industrial Ethernet Switch

The LNP-1002GN model from Aaxeon Technologies builds on the company's successful line of Industrial Ethernet switches by adding the capability to power up to eight end-devices via Power over Ethernet.

The LNP-1002GN has eight 10/100TX ports and two combo ports. These combo ports can either be 10/100/1000TX or Gigabit fiber using an SFP module (Small Form Factor Pluggable). This configuration provides the user with the flexibility to use fiber or copper ports for the uplink. Each of the 10/100TX ports supports the new 802.3af PoE standard and can provide up to 15 watts at 48VDC.

The LNP-1002GN is a managed switch that supports advanced features such as Port Trunking, GVRP, LLDP, in addition to standard management features like IGMP, VLAN and QoS. Another advanced feature is the Aaxeon proprietary ring that supports a 20ms recovery time.

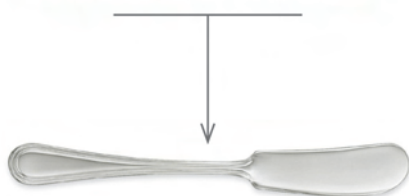

The standard model temperature range is -10° C to 70° C with an extended temperature model rated at -40° C to 80° C.

VIDEO SURVEILLANCE

Managed Redundant Ring Ethernet Switch with 12 Ports

The LNX-1212GN-SFP-T from Aaxeon Technologies is a managed redundant ring Ethernet switch with eight Gigabit combo ports and four 1000BaseX SFP ports. With complete support of Ethernet Redundancy protocol, Redundant Ring (recovery time < 20ms over 250 units of connection), and MSTP/RSTP/STP (IEEE 802.1s/w/D), the LNX-1212GN-SFP-T can protect your critical applications from network interruptions or temporary malfunctions with its fast recovery technology. It can provide advanced IP based bandwidth management that can limit the maximum bandwidth for each IP device. Users can configure IP cameras and NVR with more bandwidth and limit other device bandwidth.

The LNX-1212GN-SFP-T also supports application-based QoS. Application based QoS can set the highest priority for data streams according to the TCP/UDP port number. This feature along with the IP police function, which can permit only allowed IP addresses with MAC addresses to

access the network, helps prevent unwanted users from accessing IP surveillance networks without permission. The LNX-1212GN-SFP-T is one of the most reliable choices for highly-managed Gigabit Fiber Ethernet applications.

By integrating shared video storage and servers within a single physical hardware appliance, the Falcon-USST™ is able to fully consolidate your surveillance requirements. Manage multiple edge recorders or video management software (VMS) by applying "zones" across your surveillance environment via DNF Security's advanced VideoZone Technology™. VideoZone fully utilizes and allocates your hardware resource for maximum performance and management of critical video sources independent of VMS—increasing performance by 3x (X-Factor). With Falcon-USST™ and DNF Security's over 250 video storage models, our appliances are designed to fit your surveillance needs.

Embedded Digital Video Recorder

Honeywell has added a low-cost embedded digital video recorder (DVR) to its Performance Series line, which is an entire DVR portfolio offering a selection of DVRs to fulfill virtually any surveillance requirement, enabling end-users to choose from

a variety of recording solutions. The new entry-level HREP DVR is economically priced and offers clear, crisp video using H.264 video compression on 4, 8, or 16 channels. The low cost of the HREP DVR makes it ideal for traditional commercial deployments that require an entry-level recording solution as well as residential surveillance applications. Simple to install and set up via a user-friendly USB mouse or IR remote control, the HREP DVR requires minimal user training.

AutoDome Junior HD Series

Bosch Security Systems Inc. has expanded its AutoDome Junior HD series with a new fixed camera model. The AutoDome Junior HD Fixed Camera provides the same 1080p or 720p resolutions, 10x optical zoom and compact size as the rest of the series, making it an ideal indoor fixed camera choice for applications where both highly-detailed imaging and aesthetics are important. HD video delivers increased situational awareness with a 16:9 aspect ratio that maximizes the field of view without compromising image details. Quad-streaming provides simultaneous streaming of high-quality video with differing frame rate and resolution settings for flexibility in system design. End-users can select 1080p or 720p HD video for recording with H.264 compression, while simultaneously sending JPEG images to a hand-held device. www.boschsecurity.us

Thermal Camera Line

FLIR Systems has announced a new low price for select models of its thermal security cameras. Now offering network-ready thermal cameras for as little as \$2,995, these high-quality cameras are optimized for use with video analytics, fit easily into analog networks, and are easy to use. Unlike thermal cameras and technologies available from other manufacturers, all of FLIR's thermal security cameras can look directly at the sun for extended periods without damage or degraded performance. Still useful for traditional markets like securing nuclear, petrochemical and critical infrastructure facilities, the applications for these cameras are only limited by the imagination of the dealers and integrators who deploy them. From rooftop security to hospitals, gated communities to horse farms, more people than ever will be able to make use of thermal technology. www.flir.com

Super LoLux Camera Line

JVC Professional Products Company, a division of JVC Americas Corp., has introduced its Super LoLux HDTM line of 11 new V.Networks cameras. The new models are equipped with CMOS imagers that output full HD resolution, and offer multi-codec support, including M-JPEG, MPEG-4, and H.264. The new Super LoLux HD cameras deliver superior color reproduction, even in low light, and match the sensitivity of JVC's well established CCD-based cameras. The new cameras also include new Clear Logic Video Intelligence (CLVI) image processing, which compensates for back lighting and digitally removes ambient fog, haze, rain or smoke. There are entry-level, intermediate and advanced models in the product line, with a box style (less lens), indoor mini-dome and outdoor dome camera available at each level. <http://pro.jvc.com>

THE SMARTEST SECURITY IS IN THE CARDS

SMART end users know that smart cards, not the old fashioned magnetic stripe and proximity cards, are the physical and logical access credential of the future. SMARTER end users have already analyzed what they need to do to move off the old credential and onto the new smart credential. The benefits are clear, compliance factors are strengthened, security is top notch, and the budgets are ready.

The SMARTEST end users have already discovered Quintron's AccessNsite, the industry's leading cross-platform, database independent, enterprise-ready security management software that is smart card ready, HSPD-12 compliant and capable of growing with your future physical and cyber security challenges.

Don't know about Quintron? Become the SMARTEST end user today and go to www.quintron.com/smartestuser.

Mini Overhead Contact Available

The Tane 86 overhead garage door contact is a floor mount mini in size. Dimensions are 2 1/4" long by beveled 3/8" high. This allows the installer to mount the contact out of the way in warehouse applications. The overall gap is almost 3 inches with a leeway for the magnet to go 2 inches off center if the door moves in or out as a result of a storm. The contact is bar cast aluminum with no epoxy on the underside to deteriorate over time. The magnet housing is angled to not allow it to be used as a step for closing the door. The TANE-86 comes with commercial grade flexible armored cable. This design allows a unique use for normal doors in commercial applications by mounting the contact on the door frame and magnet on the door, thus making it hard for vandals to abuse. Tane offers a \$50 lifetime warranty. For information, go to www.tanealarm.com or call 800 852-5050.

TANE-96 EZ Mount Bi-Direction Wide Gap Track Contact

Tane Alarm's fast track mount contact, the TANE-96 is bi-directional meaning the cable coming from the contact can be mounted from the left or right by repositioning the switch on its assembly with two screws.

Installation on this commercial grade Tane contact takes under two minutes by simply sliding the track open and then pushing it in place and tightening one simple bolt. Gap on the contact is 2 1/2" featuring a minimum dead zone due to the use of two long-life reed switches in the place of the contact side. High quality is ensured with a \$50 lifetime warranty if a service call is required.

CENTRAL STATION EQUIPMENT

Personal Emergency Response System

LifeSentry is the ultimate Personal Emergency Response System, PERS. As the world's smallest two-way voice communicator, one can push the button on the pendant from anywhere in and around their home and be talking to a central monitoring station operator in seconds. For years such systems required one to shout across the house to speak to the central station operator. LifeSentry puts the speakerphone right in the pendant. Up to 600 feet of range. Choose the central station of your choice. www.LogicMarkSecurity.com. **Select Inquiry #553**

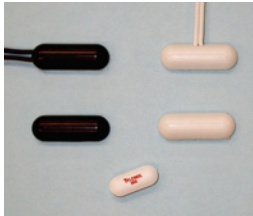

SCS-VR (Virtual Receiver)

The SCS-VR virtual software receiver from Digital Monitoring Products (DMP) has earned the UL1610 Listing, the "Standard of Safety for Central Station Alarm Units." This certification enables Central Stations to rely on a lower-cost software alternative to traditional receiver hardware. Adding monitoring capacity is now as easy as installing new software on any UL-listed server, where the SCS-VR can act as the primary receiver or backup to existing hardware receivers. The SCS-VR operates as a virtual receiver for AES-encrypted IP alarm communications, managing all network and cellular alarm signals, supervision and substitution messages at higher speeds than conventional receivers. For more information see <http://www.dmp.com/scs-vr> or contact us at 800.641.4282. **Select Inquiry #556**

Bury Your Contacts

Tane Alarm's "PILL" Contacts alleviate headaches caused by tight fitting window applications. The TANE-PILL comes in side or center leads as well as terminal

connects. Its size is a sleek, low-profile width of .20" x .39" wide x 1.10" long. It looks good on the surface of a window and works best buried in a window sill where you cannot drill due to window warranty issues. Now you have a contact that looks good on the surface or can be hidden in windows. Leaded versions include 18" 22AWG standard (with longer wires available). Gap is 3/4". Extra vent magnets are available. TANE's Pill group comes with its signature \$50 lifetime warranty on service calls. Free samples available at info@tanealarm.com, or by calling 800-852-5050. www.tanealarm.com. **Select Inquiry #554**

SALTOGEO Cylinder

The new SALTOGEO electronic cylinder lock is the latest addition to the SALTO stand-alone range of RFID locks.

work capability thanks to its SALTO Virtual Network technology as well as a choice of ID credentials.

All communications between the credential and the SALTOGEO cylinder are encrypted and secure and built-in NFC (Near Field Compatibility) compatibility is included on contactless versions.

It provides both acoustic and optical signaling through its stylish light ring, with dual colored green/red indication to visually signify access authorization.

Fully integrated with the SALTO XS4 platform, SALTOGEO is a versatile, cost-effective solution and its compact size and easy installation make it the ideal electronic locking system for installation to almost every type of door, including wooden doors, metal and metal framed doors and glass doors.

SALTOGEO offers virtual net-

work capability thanks to its SALTO Virtual Network technology as well as a choice of ID credentials. Available in five different finishes, users can choose from satin chrome, polished chrome, PVD polished brass, PVD satin brass and PVD black. So, whether you want a cylinder that can be used with ANSI locks or RIM locks or even need a cylinder for a padlock — SALTOGEO is the answer.

450mA Latch Retraction/Dogging Kits

With only 450mA inrush, SDC's UL approved QUIET DUO™ LR100 series field retrofit kits provide simultaneous electric latch retraction and dogging with automatic retriggering for Von Duprin, Sargent, Yale, Corbin Russwin, Dor-O-Matic, Precision and Adams Rite mechanical exit devices. They eliminate costly exit device replacement while providing access control and sustained dogging (pushpad depression) for sustained push-pull applications. The QUIET DUO™ utilizes low-current motorized operation compared to high-inrush solenoids. The simultaneous pushpad depression provides operation for both sustained dogging and momentary access control applications. Latch and pushpad status are optional.

With only 450mA inrush, 180ma continuous current at 24VDC, the need for costly special power supplies is eliminated and enables longer, smaller gauge wire runs. The SDC 602RF 1-Amp power supply with emergency release input powers two

devices and latches doors in an emergency. EMC-2, two-station sequencers required for automatic doors only.

The SDC EMC-2 door sequencer is available for use with one or two automatic doors. Door sequencers are not required for pairs of manual doors.

Retrofits Von Duprin Exit Devices without Removing from the door.

The QUIET DUO™ LR100VDK field retrofit kit is UL Recognized for Von Duprin 22, 33/35, 98/99 non-fire rated exit devices. The SDC factory installed LR100VD is UL Listed for fire rated and non-fire rated models.

Magnetic Lock Retrofit Kits for Discontinued Locknetics 390+

Excel™ E1200-390MP

The E1200-390MP Mounting Plate from SDC provides the simplest and most economical solution for retrofitting Locknetics 390+ Series locks.

- Uses the existing mounting plate holes to mount SDC's E1200 1200lb magnetic lock (sold separately).

- Saves valuable time by using the existing door and header prep. No additional holes are required through the door.

- All required hardware is included.
- Utilizes SDC's E1200 Excel Series lock with Door & Lock Monitoring options standard.

EMLock® 1511-390AMP

For customers with high security requirements, the 1511-390AMP Armature Mounting Plate provides an easy solution for replacing Locknetics 390+ Series with SDC's Grade 1, 1510 Series EMLock (sold separately).

- Mounts to the existing sex bolt hole using the existing armature hardware, while only requiring only a minor

modification to the frame.

- Uses the existing sex bolt prep and hardware. No additional holes are required through the door.

- Armature Mounting plate comes pretapped with the new armature mounting holes, saving time for the installer.

- All required hardware is included.
- When using the supplied template, only a slight modification is required to the frame.

- The existing holes will be concealed.

4 7/8" ANSI Electric Strike Solution

The 3000 series from Trine Access Technology are the smallest electric strikes in the world. The 3478 is the 4 7/8" ANSI solution for wood and metal frames. The 1/8" horizontal adjustment feature is guaranteed not to move for those installations where the door doesn't line up. Use with any cylindrical locksets having up to a 5/8" throw. As with other strikes in the 3000 series the 3478 requires far LESS cutting of the frame face, making installations faster and the integrity of your frames stronger.

When installing in metal frames a small notch is all that is needed and the 1" backset means dust boxes stay in place. In wood frames the small body and 1" backset require the LEAST amount of cutting in the industry.

The 3478 can be selected with one of six architectural finishes. It's available in 12 or 24 DC voltages or with our LC Unit that allows 11-28 AC and DC voltage with surge and kickback protection.

Compare the one piece, all stainless steel, faceplate and ramp to

the competition and know that with the 3478 you get ease of installation, adjustability, and strength with this Grade 1 electric strike.

Multi-Point Lock

The Detex ECL-230X-TDB is a maximum security, multi-point lock so big and strong that it stands up to assault by the bad guys. Its heavy-duty, three-bolt construction takes panic hardware to a whole new level of toughness and eases your backdoor security worries. The 230X-TDB is designed with a larger deadbolt that goes deeper into the frame than other locks in the category. Connecting rods are solid steel, rather than the less reliable hollow rod/cable construction. Its low profile meets International Building Code requirement allowing for 4" maximum projection off the face of the door. Life safety and code compliant, the Detex 230X-TDB serves as both panic hardware and a maximum-strength locking device.

DOOR HARDWARE

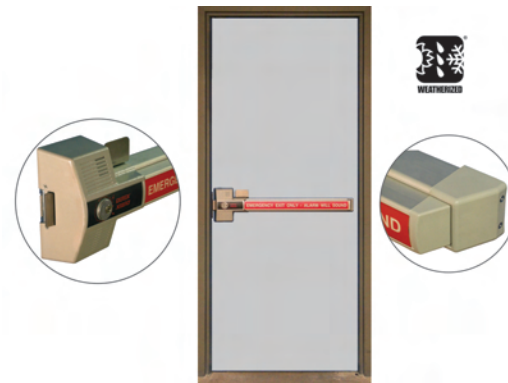

SELECT Hinges™ Geared Continuous Hinges

Do your customers complain about a “problem door?” Chances are, the problem isn’t the door. Or even the lock. Fix the real problem — worn out butt and pivot hinges — and deliver total door service with SELECT geared continuous hinges. A SELECT geared continuous hinge surpassed 25,000,000 open/close cycles in laboratory testing — equivalent to 50 years of high-traffic use and 10 times beyond BHMA Grade 1 cycle count. That’s why we can offer the industry’s only Continuous Warranty™, a warranty that never expires. SELECT hinges eliminate hinge repairs forever and are ideal for high-traffic doors in retail storefronts, schools, convention centers, sports facilities, airports and other public buildings.

Biometric Logon Software

3M Cogent's BioTrust® biometric logon software is a fast, easy, and secure way to replace your Windows® computer logon. Your face or fingerprint replaces the traditional username and password logon. Just sit down in front of your computer or swipe your finger across the fingerprint sensor and BioTrust will do the rest. Lighting conditions, such as side lighting, backlit areas, low ambient lighting, or lighting from the LCD screen itself are not an issue with 3M Cogent's advanced facial matching algorithm. All you need is a web camera or a fingerprint sensor.

The BioTrust console easily allows users to customize security level settings, enroll facial/fingerprint images, and manage Web SSO (Single Sign-On) subscriptions. Enrollment is a breeze with BioTrust's intuitive enrollment wizard: visual cues and videos guide you through the enrollment process. Your computer is biometrically secured in a matter of minutes!

BioTrust's automatic Web SSO functions as a password manager for web-

site logons. Whenever you navigate to a secured Web site (Web mail, social networking sites, online banking) BioTrust automatically captures the logon information while keeping you in full control. The Dashboard with Quick-Launch allows quick and easy access to Web sites that have been enrolled in the Web SSO with one click, in one convenient location.

High Power Speaker Array

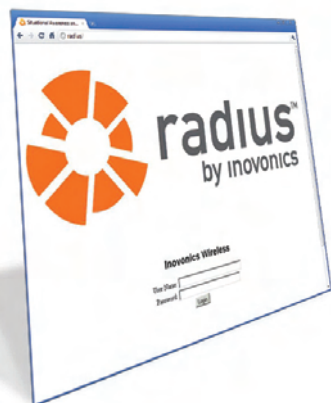

Cooper Notification, a platform of Cooper Industries plc, has launched its latest Wide-Area Mass Notification System (MNS) solution. The WAVES High Power Speaker Array (HPSA) 7100 Series, which provides highly intelligible

voice and tone announcements, can be integrated with an organization's voice-capable Fire Alarm Control Panel (FACP) as well as Cooper Notification's SAFEPATH®4 (SP40S) Voice Evacuation Systems and SAFEPATH Mass Notification Systems (SPMNS), providing a simple upgrade path to expand emergency communications coverage to outdoor areas. Using leading-edge amplification technology, Cooper Notification's High Power Speaker Arrays were designed for high intelligibility and energy efficiency. The HPSA's vertical line arrays provide a narrow vertical output pattern for focusing sound directly at the audience, which produces better sound pressure and higher intelligibility. By creating a nearly cylindrical sound propagation pattern, the system allows messages to be clearly understood whether a person is 100 feet or 1,500 feet away from it.

Radius by Inovonics

Radius is an awareness and alerting engine designed with commercial buildings and campuses in mind. It combines the latest mass notification capabilities with Inovonics' advanced positioning technology to pinpoint duress alarm devices. Radius also integrates to existing building system investments such as fire, access control, and environmental systems to provide instant notification of event activity from those systems to alert devices such as cell phones, two-way pagers, or email systems. Whether it is a system status update or a life-safety alert, you can be confident the right people will be aware of what is happening on the premises.

Mass Notification Communications Module

Talk-A-Phone Co., has released the model WEBS-CM-2 Communications Module, usable for a variety of mass notification applications. Integration options include IP-based cameras, emergency blue lights, access control and high-power speaker arrays. Part of the supplier's WEBS Contact platform, the communications module can relay audio paging to any external device that accepts a line level audio and a dry contact, allowing emergency personnel to issue targeted audio alerts to any segment of a facility. The unit has Ethernet connectivity and full IP compatibility. It also features an additional Layer 2 switch Ethernet port to extend the footprint of an IP network. www.talkaphone.com

Indoors or Outdoors, We've Pushed Reliability to a Whole New Level

The Electro-Mechanical Bar is Securitron's first fully mechanical, non-latching exit device designed for magnetically locked, non-fire rated openings. The EMB also serves as an initiate device that triggers an egress timer when delayed exit is required. Four internal switches and independent switch circuits provide accurate, ultra-dependable lock operation. Optional weatherproof switches allow the EMB to function in many outdoor applications as required by life safety codes. Compatible with metal, aluminum, wood and all-glass doors.

FIRE & LIFE SAFETY

VESDA By Xtralis

VESDA by Xtralis very early warning air-sampling smoke detection (ASD) solutions with continuous air sampling provide the earliest possible warning of an impending fire hazard. With multi-level warnings and a wide range of sensitivity that does not degrade or change over time, even minute levels of smoke can be detected before a fire has time to escalate. VESDA ASDs come in a variety of models to accommodate a broad range of applications and environments in different sizes — from data centers to large, open spaces as well as harsh environments. Optional gas detection and environmental monitoring is available with the new VESDA ECO solution which reliably detects hazardous/combustible gases to ensure air quality. www.xtralis.com **Select Enquiry #574**

Select Enquiry #575

OSID By Xtralis

Open-area Smoke Imaging Detection (OSID) overcomes the weaknesses of traditional detectors used in large, open spaces where only standard sensitivity detection is required. In its simplest configuration, OSID uses one imager, a camera-like device with a wide field of view, and a wired or battery-powered emitter roughly aligned on the opposite wall within the protected area. The emitter sends both infrared and ultraviolet coded light signals to the imager. If the light reception is altered due to the presence of genuine smoke particles, the imager will go into alarm. The novel use of dual light frequencies in an open path device enables OSID to discriminate between real smoke and other objects, including solid objects, insects, steam and dust, thus drastically reducing false alarms.

LOCKS, KEYS & AUTOMOTIVE

SALTO XS4 Locker Lock

The SALTO XS4 Locker lock delivers a high level of security protection for lockers and cabinets.

Most lockers and cabinets are supplied with very basic mechanical locks that offer little in the way of resistance to thieves. XS4-Locker solves this problem by offering the latest in state-of-the-art electronic access control technology in a low-

cost, simple retro-fit format.

Upgrading from an existing mechanical lock is quick and easy. The old lock is removed and the XS4-Locker simply fitted in its place. No wiring is required, power is supplied by 3 AAA or optional lithium batteries good for 30,000 openings, and its exterior dimensions are a compact size, ensuring a neat fit and professional appearance.

An ergonomically designed twist-operated locking handle makes for easy use, even with wet hands, and its durable, wipe-clean construction makes it highly resistant to chemicals, UV radiation and physical wear and tear, ensuring a long-lasting, smart appearance.

The ID credential — key card, wristband, key fob or bracelet — is simply presented to the reader and XS4 Locker will grant or deny access. A family option allows for multiple ID credentials to operate a single locker and its built-in audit trail facility automatically records the last 1,000 operations.

BOLT Lock Family

Say goodbye to cluttered key chains, forgotten combinations and lost keys. You can customize as many locks as you want to work with ONE key — your vehicle key. Users simply select a GM, Ford, or Chrysler compatible lock, insert and turn their vehicle key, and the lock will be permanently coded to their key. Now a colorful, attractive product display is available for the BOLT padlocks and receiver locks. The display holds 12 padlocks and 12 receiver locks. It makes an eye-catching display as an aisle end cap. The display comes complete with the padlocks and receiver locks already in the display. Just open it up and place in your store. For more information, go to www.BOLTLOCK.com.

Your **problem door** isn't a door problem.

Your sticking door probably isn't the door's fault. Butt and pivot hinges wear out quickly on high-traffic entrances. Stress focused on only two or three hinge points eventually deforms the hinges, making your door hard to close and compromising security.

A SELECT geared continuous hinge fixes your "problem door" for good.

A SELECT geared continuous hinge distributes stress along the door length, giving it durability proven by more than 25 million open/close cycles in independent testing. That's why we can offer the industry's only Continuous Warranty™ covering any failure of our aluminum geared continuous hinges — with no expiration date.

VISITOR MANAGEMENT

EasyLobby/Schneider Integration

EasyLobby has announced the availability of an integration module with Schneider Electric's Andover Continuum and TAC I/NET access control products. This "tight" product integration enables end-users using Schneider Electric access control and EasyLobby's visitor management solutions the ability to issue different levels of access to visitors, contractors and employees directly from the EasyLobby SVM (Secure Visitor Management) visitor form. When a visitor is checked in at an EasyLobby station, an access proximity card or other credential can be activated for that visitor in real-time. When the visitor checks out, the credential is automatically deactivated. Cards do not have to be pre-programmed, and they can be reused.

Optical Turnstile

The Supervisor 5000 optical turnstile (SU5000) from Alvarado combines superior detection technology, motorized swinging barrier panels and an architecturally styled cabinet, along with a number of highly desirable options. The product takes up very little floor space and the design makes liberal use of architectural glass. It also has custom options, such as LED accent lighting, logo etching on glass panels and custom cabinet and lid materials. Swinging panels can be waist high, or full height for higher security installations. The barrier panels are controlled by powerful motors that quietly open the panels fast enough for rapidly moving patrons. Opening and closing speeds are adjustable, and the product is offered in standard and disabled access widths.
