THE SECURITY INDUSTRY'S PRODUCT GUIDE

RS2 Technologies Step Up℠ System

The **Step Up℠ System** is the latest in RS2's line of access control solutions that allow customers to enjoy the benefits of an open platform approach at a reasonable cost and with a minimum of installation hassle. The **Step Up℠ System** is a reliable, easy-to-install hardware retrofit offering a simple board swap of boards currently installed in legacy systems. By using Authentic Mercury™ legacy replacement hardware, **Step Up℠** provides a "screwdriver-less" retrofit of outdated and unsupported installations that use proprietary hardware and software.

By working in partnership with Mercury Security, RS2 is able to provide customers who have previously-installed legacy systems with a solution that saves their entire investment in peripheral and network wiring, reader technology, enclosures and power deployment. Labor costs are also minimized compared to entire system replacements. By using a **Step Up℠** replacement unit, customers can simply remove the connectors from the legacy board, remove it from the enclosure, replace it with the corresponding **Step Up℠** board, refit the connectors and power up. The bridged hardware is now open platform, reliable and uses current technology. System downtime is also minimized, as all boards are "hot swappable," meaning that replacements or additions can be installed while the enclosure is powered up and running the system. To find out more, call 877.682.3532 or visit the website below.

AXIS Q6000-E: Simultaneous Full 360° Overview and Detailed Zoom

AXIS Q6000-E is an outdoor-ready 360° network camera that integrates seamlessly with the AXIS Q60-E Series of PTZ dome network cameras to provide a unique surveillance solution. A click on any object in AXIS Q6000-E, using the one-click PTZ control feature, will trigger an integrated AXIS Q60-E to optically zoom in to the specific object of interest.

The use of two screens gives a full 360° overview from AXIS Q6000-E and a zoomed-in view from AXIS Q60-E, providing operators with a high level of detail while still being able to maintain an overview of the entire monitored area for up to 215,000 sq. ft.

Any AXIS Q60-E camera is easily mounted inside the AXIS Q6000-E, allowing pre-existing AXIS Q60-E installations to be upgraded to monitor wide areas, while simultaneously capturing every detail of interest with just one click. Time and cost of installation are minimized since AXIS Q6000-E uses the same brackets and network cable as the AXIS Q60-E. Furthermore, AXIS Q6000-E is supplied with PoE+ through AXIS Q60-E, eliminating the need for power cables.

AXIS Q6000-E features four 2MP camera heads, each providing individually configurable 720p HDTV video streams in H.264 compression. Motion JPEG is also supported for increased flexibility. AXIS Q6000-E is ideal for city surveillance applications, such as monitoring of public squares and parking lots or other open areas.

WinDSX AES-256 Encryption Software

The WinDSX AES-256 encryption software from DSX Access Systems contains government approved AES-256 bit encryption technology that can be implemented system-wide.

Encryption capabilities are built into the software and every field controller. For example, communications to each Location in WinDSX AES-256 can optionally be encrypted with a unique encryption key assigned by the customer for communicating with that Location's field controllers.

This is but another tool for DSX Integrators in meeting government requirements and FIPS compliancy just like the recently achieved UL 1076 listing.

Once purchased and enabled in the DSX Features Key, there is an Encryption Key that can be implemented to encrypt communications between the Comm Server and the Workstations. There is also an encryption key that can be implemented optionally and individually for each location. Once communication is encrypted from the Comm Server to the Master Controller, the encryption is propagated to all controllers in that location.

Bolide's Newest Digital Video Recorder – Now with P2P Technology

Bolide SVR9000HDP DVR Series introduces a new feature that makes it the most user-friendly and powerful DVR today — P2P technology. This function allows automatic port forwarding and instant connection to the network without any time-consuming configuration.

The SVR9000HDP DVR records HD-quality video without compromise — 960H resolution at real-time frames per second on every channel. View your DVR in 1080p display on a high definition monitor via its HDMI output. Multiple video management options feature time schedule recording, motion detection, alarm triggering, etc. Other features include audio in/out, alarm in/out, PTZ control via RS-485 port, among others. The SVR9000HDP comes in 4-channel, 8-channel and 16-channel models.

With the SVR9000HDP DVR Series, remote viewing has never been easier. Simply scan the QR code on your phone or tablet and log in to any DVR anytime, anywhere. Bolide's Central Management Software also comes packaged with every unit for multiple DVR management on one interface.

Bolide Raphael Plus – The Best in the Industry

Raphael 1100TVL

The Raphael Plus Series from Bolide introduces a new pinnacle in analog CCTV camera technology. Powered by a new 1/3" Sony Megapixel image sensor, these cameras produce an astonishing 1100TVL resolution video with unmatched color reproduction. Bring any environment to life with more pixel density than ever before, allowing users to see even the smallest details. Enhanced 3D noise reduction and an extended dynamic range ensure accurate textures and sharp images from every angle.

Each Raphael Plus comes with an array of great features. Durable Super Flux IR LEDs make them ideal for night-time monitoring, and an onboard OSD control allows users to make adjustments to get the best picture in any environment. Its aesthetically pleasing IP66 rated housing design makes for easy installation for both indoor and outdoor applications.

Unlike CVI and TVI, the Raphael Plus does not have limitations in terms of recording solutions. The Raphael Plus is compatible with every DVR in the market today. This makes it the best solution for new camera systems, and serves as an upgrade for older, existing cameras. The Raphael Plus is available in fixed and vari-focal dome, eyeball, and bullet housing styles.

Megapixel performance in an analog camera — there is nothing better than the Raphael Plus.

ViconNet 7 Video Management Systems from Vicon

Announcing the latest evolution of video management software — ViconNet 7. Our open-platform network VMS solutions have become a critical component in securing thousands of facilities worldwide. Our newest version offers a feature-rich interface, reliable performance, and fully scalable system that allows for customization and compatibility with a wide range of ONVIF-compliant video and computer hardware.

Powerful: Our unique and powerful features offer all the tools necessary to maintain and monitor video security for all types of applications. With simple and intuitive features such as recording manager, search function, event and alarm management and archive wizard; we make it easy to setup and monitor. ViconNet 7's improved high-megapixel algorithm displays clearer images and crisper details. We deliver the widest range of display options, from smartphones or tablets to huge multi-monitor command centers via the Virtual Matrix Display Controller (VMDC).

Reliable: You can count on us with over 40 years of experience in thousands of installations. System components are backed by our professional services program that ensures ease of installation and long-term performance.

Scalable: ViconNet offers video management solutions optimized for every size and budget, offering the JUMP, ZONE and PEAK three-tiered option. Our open-platform and compatibility allows for system expansion and versatility.

ComNet Advances NetWave™ Wireless Ethernet Transmission Product Line – Easy to use and no Certification Needed to Install

ComNet, a USA-based manufacturer of fiber optic and copper transmission and networking equipment, has expanded its line of wireless Ethernet Transmission Products. NetWave® will consist of commercial grade and industrially hardened point-to-point kits, as well as point to multipoint models. The NetWave® NWK-1 is available exclusively as a kit and contains all the components needed to transmit a single Ethernet stream between a remote location and Access Point. To make NetWave™ products easy to install, all NetWave™products feature LED arrays that assists the installer in aligning the antennas for optimal performance. This feature as well as many others further supports the ComNet goal of simplifying NetWave™ installation. With NetWave® there are no certifications need to install it.

For more information on the easy-to-use, easy to install NetWave® Wireless solution visit: www.comnet.net/comnet-products/ethernet/wireless.

ComNet offers an extensive line of fiber optic video and data transmission equipment as well as a line of Ethernet Network equipment that is uniquely toughened to meet the needs of the Security and Intelligent Transportation System market. Full product line details are available at the link below. Call direct 203-796-5300 or email sales@comnet.net for details.

Bolide's 4-Channel 1080p HD Camera Kit

Bolide's newest 4-channel network camera system kit provides a simple 'plug and play' solution for any IP camera application. This complete system includes four iPac Lite 2.0MP cameras and BN Series 4-Channel NVR with built-in POE.

The iPac Lite series features full 1080p high-definition video and all the essential features in an affordable package. Powered by a 1/3" 2.0 Megapixel image sensor, these cameras produce a crisp 1080p high definition resolution and accurate color reproduction for great detail. These hybrid cameras (IP and analog) provide multiple stream options and an analog BNC output as a spot output for public view monitors. The iPac Lite series are POE-enabled, and are embedded with the latest ONVIF protocol that allows for easy integration with other IP camera systems.

Bolide's BN Series stand-alone NVR is one of the most powerful and user-friendly NVRs in the industry. This NVR supports up to 16 cameras and records at 1080p high definition video. Setting up cameras is quick and easy. Its "auto-sniff" feature automatically detects cameras that are connected into its built-in POE ports and streams onto the screen instantly! The simple GUI allows easy operation and intuitive user experience. The BN Series NVR also features schedule recording, alarm recording, motion detection and pre/post alarm recordings. Its two hard drive bays are capable of carrying up to 4TB of storage. VGA and HDMI outputs are built-in for high definition displays and remote viewing is available for Android and iOS devices.

The iPac Lite Series cameras and BN Series NVR are the perfect combination that makes up one of the most powerful, reliable, and affordable camera systems available in the industry.

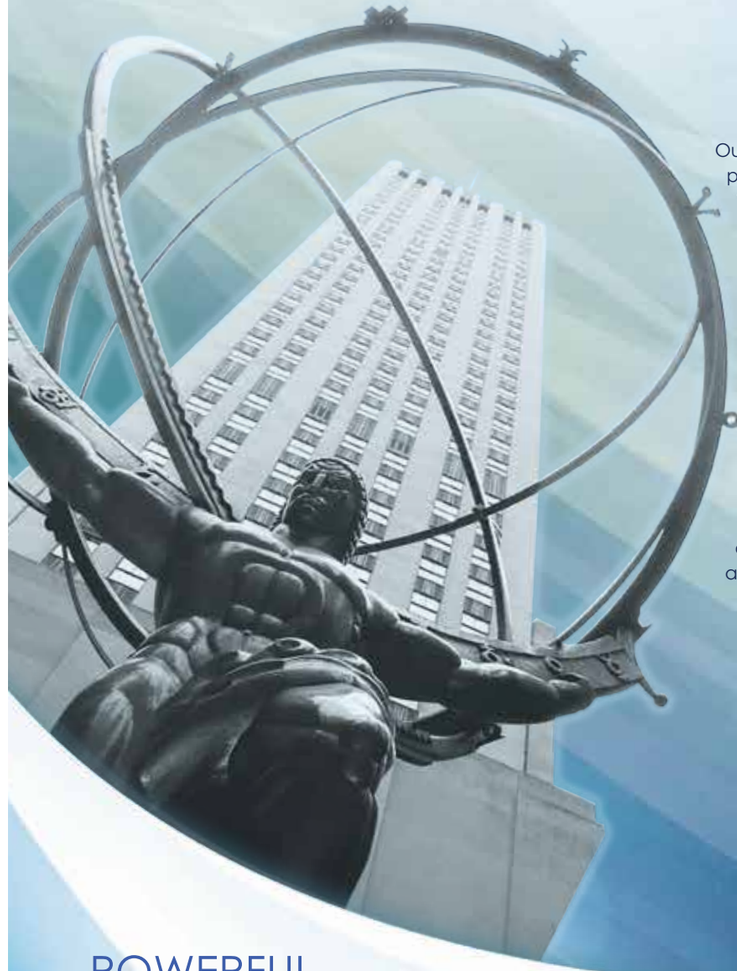
Introducing ViconNet 7



Our open platform video management software delivers powerful, reliable and scalable solutions for any application. ViconNet 7 is the latest evolution of our VMS platform that's become the critical component in securing thousands of facilities worldwide. With a new suite of features that streamline setup and add new functionality, our newest version offers:

- Improved high megapixel display for clearer images and crisper details
- New time-saving recording configurator
- Flexible privacy masking pre- and post-recording
- Multi-platform Mobile Client
- Free 6-channel starter package available for download

With packages priced for every sized system and budget, our scalable JUMP/ZONE/PEAK video management solutions are optimized for all your security needs.

ComNet CNMCSFP Series Accommodates Both 10/100Mbps or 1000Mbps Transmission with PoE in One Unit

ComNet Communication Networks now offers a variable rate electrical-to-optical media converter with PoE (Power over Ethernet) that allows the user to select between 10/100 Mbps and 1000Mbps rate transmission and provides up to 30 watts of PoE+ for powered devices (PD).

ComNet designed this hardened media converter, the CNMCSFP, for applications where there is a potential upgrade to Gigabit transmission or as method to reduce the number of individual media converter models being used. This multiple rate feature can eliminate future hardware upgrade costs. The CNMCSFP uses small form factor (SFP) devices, giving the user flexibility in terms of fiber type, connector type and distance. The CNSFPMC is made in the USA and comes with a lifetime warranty.

In effect, once in place, there is virtually no Ethernet bandwidth requirement that cannot be accommodated. More info is available at: www.comnet.net/comnet-products/ethernet/media-converters/cnmc2sfppoem.html.

Full product line details are available at the link below. Call direct 203-796-5300 or email sales@comnet.net for details.

AXIS Q6000-E: Simultaneous Full 360° Overview and Detailed Zoom

AXIS Q6000-E is an outdoor-ready 360° network camera that integrates seamlessly with the AXIS Q60-E Series of PTZ dome network cameras to provide a unique surveillance solution. A click on any object in AXIS Q6000-E, using the one-click PTZ control feature, will trigger an integrated AXIS Q60-E to optically zoom in to the specific object of interest.

The use of two screens gives a full 360° overview from AXIS Q6000-E and a zoomed-in view from AXIS Q60-E, providing operators with a high level of detail while still being able to maintain an overview of the entire monitored area for up to 215,000 sq. ft.

Any AXIS Q60-E camera is easily mounted inside the AXIS Q6000-E, allowing pre-existing AXIS Q60-E installations to be upgraded to monitor wide areas, while simultaneously capturing every detail of interest with just one click. Time and cost of installation are minimized since AXIS Q6000-E uses the same brackets and network cable as the AXIS Q60-E. Furthermore, AXIS Q6000-E is supplied with PoE+ through AXIS Q60-E, eliminating the need for power cables.

AXIS Q6000-E features four 2MP camera heads, each providing individually configurable 720p HDTV video streams in H.264 compression. Motion JPEG is also supported for increased flexibility. AXIS Q6000-E is ideal for city surveillance, such as monitoring of public squares and parking lots or other open areas.

iPac Meg Series IP Cameras from Bolide

Bolide's iPac Meg camera series is one of the most-feature rich premium IP camera solutions available today. Available in 2.0 Megapixel and 5.0 Megapixel lines, these high definition cameras possess a slew of time-saving features and functions: A BNC output makes it easy to access the camera stream for focusing and servicing; Two-way audio for call boxes, VMS stations and guard stations; Built-in SD card slot for back-up storage; Alarm in/out for integration with external alarm devices; A mechanical IR cut filter for impressive night time images; and PoE that allows the camera to be powered by a single Ethernet cable.

The iPac Meg comes packaged with a license-free iPac 2.5 VMS that will record and manage up to 255 cameras. It is also compatible with the newest Bolide NVRs and is embedded with the latest ONVIF protocol for integration with other software and recording devices. The iPac Meg is available in a dome, bullet and box housing styles.

Bosch's DINION IP Ultra 8000 MP camera

Bosch's DINION IP ultra 8000 MP camera features the latest 4K ultra HD technology and simultaneously supports a wide-angle overview and multiple focus points on a single screen to focus on details without losing the bigger picture. Its 12 megapixel or 4K ultra HD resolution allows any given subject to be viewed in detail unknown until now even when zoomed-in. As a result, the DINION IP ultra 8000 MP offers the decisive clarity needed for collecting relevant evidence for highly detailed and effective retrospective analysis. Now, it is easy to keep an eye on the crowd, for example in a stadium, and provide enough detail to identify individual people. Built-in Intelligent Video Analysis (IVA) makes it an ideal solution for highly detailed and effective retrospective analysis. **www.boschsecurity.com/HDSecurity**

Toshiba IKS-WD6112 IP Dome Camera

Toshiba Surveillance & IP Video Products' IKS-WD6112 is a discrete, low-profile IP dome camera designed for indoor video surveillance. Although exceptionally lightweight and compact, the camera unleashes the full power of IP video with its true HD resolution (1920x1080) at 30 frames-per-second, plus its bandwidth-efficient H.264 compression. Quad-streaming capabilities provide four separately configured video streams from one camera simultaneously, enabling users to optimize each stream. Features include Wide Dynamic Range and electronic day/night imaging, making it ideal for all lighting conditions. At less than two inches high, it can be installed in locations where standard cameras would be obtrusive. It is ONVIF compliant for maximum compatibility with network equipment from Toshiba or third parties and includes Power over Ethernet (802.3af).

Request more information: www.SecurityInfoWatch.com/12019986

12MP Sentinel IQEye Camera from Vicon

With the best 4K image in the industry, the newest addition to the Sentinel line delivers up to 12MP resolution and is ideal for outdoor applications that typically cover wider fields of view. It delivers vibrant, crisp images using cutting-edge imaging sensor and encoder technology.

The 12MP Sentinel offers approximately **6 times the pixels** available in a standard HD 1080p camera, enabling greatly increased pixel density for the same scene. Users can install fewer of these cameras to capture a wider field-of-view while maintaining the original pixel density. With its dual-core CPU, the 12MP Sentinel has unique on-camera processing capabilities to deliver multi-streaming forensic quality video with enhanced image processing and noise correction, while also running analytics directly on the camera before pushing video over the network.

Cost Effective: affordable and requires fewer cameras to capture wider field-of-view.

Superior Resolution: achieves forensic detail at a greater distance, for example, from across a stadium.

Power at the Edge: provides capabilities on-board camera to run applications such as analytics and recording.

Reduce bandwidth demands and cost: with multi-stream ability, a 1080p stream can be stored to the NVR while the 4K stream can be stored on the device with USB storage — reducing storage expenses and bandwidth demands.

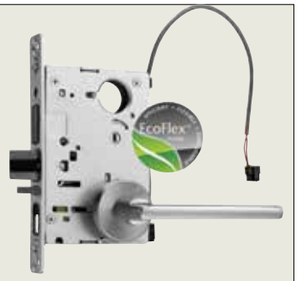
EcoFlex™ Electrified Mortise Locks



EcoFlex technology, available in electrified mortise locks from ASSA ABLOY Group brands CORBIN RUSSWIN and SARGENT, represents a significant innovation in door opening technology. The EcoFlex electrified mortise lock is ideal for access control applications, whether it is used in conjunction with a wall reader, in an integrated hardwired lock, or in an integrated battery-powered lock.

EcoFlex offers a flexible, reliable solution with a single ANSI/BHMA Grade 1 mortise lock that can serve a variety of uses. One lock body can be used for 12V - 24V applications and can be easily field-configured for fail-safe or fail-secure operation.

EcoFlex electrified mortise locks offer a remarkable 97 percent reduction in energy usage compared to standard electrified locks. With this dramatic reduction in energy consumption, drawing less than ¼ watt at 12V, Ecoflex offers more flexibility to consolidate power supplies and reduce operating costs. With the lower power draw, the load on each power supply is lessened, reducing costs, simplifying deployment and improving system reliability.

EcoFlex's innovative actuator design further improves system reliability by eliminating the risk of voltage drops and inductive kickback, enabling longer cable runs and eliminating the need to add kickback diodes to an installation, for reduced cost and complexity.

Loc-Down™ by MARKS USA: Life Safety Classroom Intruder ANSI/ BHMA F110 Function Leverset

To answer the challenge of security and life safety in today's classroom environment, Marks USA Custom Lockset Division has developed the Loc-Down™ Classroom Intruder ANSI/BHMA F110 Function Leverset with Clutch Design (Marks USA Function DB). Marks USA has incorporated all of the standard features of their Survivor Series Locksets (clutch system, super strength retractor, long-life lever support springs and a life test of over 3 million Cycles) with their new Life Safety Classroom Intruder Function.

At the first sign of trouble outside, lock down a classroom instantly with Marks USA's Loc-Down™ Intruder Locksets. Typical Classroom function cylindrical locksets are designed to be locked or unlocked from the exterior with the interior always in an open position, but allows in emergency life safety situations the teacher to secure the classroom without stepping into the hallway to lock the outside handle. Faculty and students remain safely within the classroom. There is no need to open the door, the exterior lever is disabled by operating the interior lock cylinder.

Kaba Access & Data Systems' Product Line

Kaba Access & Data Systems Americas comprise the leading manufacturers of asset protection solutions and innovative technologies that define security and convenience. Kaba ADS Americas product portfolio transcends the asset protection category. Our wide-range of diversified and technologically advanced product groups include:

- Safe & Container Lock Systems
- Commercial Access Control
- Hotel Locks and Multi-housing Access Control Systems
- Physical Access Systems
- Embedded Access Control/Time & Attendance Systems

Kaba ADS Americas continually outpaces the security industry by delivering high-performance asset protection systems for a multitude of specialized applications. Our integrated end-to-end solutions are designed with a single goal in mind — protect people and property. Our brands represent the most trusted names in access control: Kaba; LA GARD; Simplex; E-Plex; ILCO; Saflok; Oracode; and Keyscan.

Our latest technologies incorporate remote access control, biometrics, wireless, GPS and mobile access solutions. Our quest to develop innovative yet practical products is what differentiates Kaba ADS Americas and adds value to our brands.

Kaba – Beyond Security

Kaba is a leading provider of high quality, innovative access management solutions, keys, cylinders, physical access systems, enterprise data and time recording systems, and hotel access systems. The group is also a global market leader for high security locks, key blanks, transponder keys and key manufacturing machines. For more info, contact us: Kaba ADS Americas - 2941 Indiana Ave., Winston-Salem, NC 27101. Phone: 800.849.8324. Email: info.accesscontrol.us@kaba.com

DynaLock 2011-390 Electromagnetic Lock

The DynaLock 2011-390 Electromagnetic Lock is designed to be a dimensionally exact retrofit for the Locknetics 390+ maglock. It features matched mounting and wire entry hole locations, as well as coil and armature positioning, to precisely fit existing 390+ door and frame preparations. Rated for 1,200 lbs. holding force, the 2011-390 shares all DynaLock 2000 Series electronic options. The 2011-390 is made in the USA and carries the exclusive DynaLife® lifetime warranty.

Popular features include:

- Exact-fit replacement for the Locknetics Model 390+ MagLock
- Matched 390+ Series Mounting Hole & Wire Entry Locations
- Matched 390+ Series Coil & Armature Positioning
- Dimensions: 2-¾" H x 1-½" D x 10-½" L (Single); 20-5/8"L (Double, Model 2022-392)
- Holding Force: 1200 Lbs.
- Voltage: 12 or 24 VDC/VAC, Field-Selectable
- Current Draw: 220 mA at 24VDC / 440 mA at 12VDC (Single)
- 440 mA at 24VDC / 880 mA @ 12VDC (Double)
- Supports All DynaLock 2000 Series Electronic Options

Open Options' DNA Fusion & Mercury Security Deliver Open Architecture Access Control Software & Hardware

Open Options' DNA Fusion is the most IT-centric access control software on the market, and an integral partner of Mercury Security in delivering *open platform* security solutions for the last 15 years.

Open Options has developed DNA Fusion to allow access control customers to move beyond proprietary traps into a modern system with contemporary functionality, features and most importantly, a dynamic future of enhancements, network compatibility and options. Award-winning DNA Fusion includes access via a traditional client/server architecture and on-the-go with Fusion Mobile or Fusion Web. Flex API allows for seamless interfaces with leading systems including video, biometrics, intercom and more.

A Mercury Platinum Elite partner, Open Options distributes the Authentic Mercury line of access control hardware in addition to "Mercury Powered" products — including the NSC-100 and the DController — that provide comprehensive, top-of-the-line access control solutions.

The NSC-100 IP-Based Door Module eliminates traditional wiring by connecting directly to a user's network. The DController is a compact, IP-Based Intelligent Door Controller designed to quickly and easily add doors to any system using standard 10/100 network infrastructure. Both products allow for new IP deployments on all existing legacy Mercury installed systems, as well as a superior approach to newly specified requirements for edge-connected intelligent devices.

RACK ARMOR™ Server Protection from IDenticard

It's time to RETHINK physical data security! RACK ARMOR™ server protection, by IDenticard® Access Control, is an award-winning physical access control solution that protects data at rack level. It restricts and monitors access to both front and back doors of server racks. This patent-pending system tracks who accessed the cabinets, when and the amount of time the cabinet doors were opened.

Its easy-to-use graphic interface includes dynamic mapping so you can quickly visualize the security status of your system across multiple locations. In the event of an alarm, quickly drill-down and pinpoint the exact location of the affected rack. RACK ARMOR sends automatic notifications through email, alarms and video-call-up when server racks are not secured.

IDenticard has been a Strategic Technology Alliance partner with Mercury Security since 2007. By using the Authentic Mercury Open Hardware platform, IDenticard has developed RACK ARMOR to provide the richest set of security features available:

- Easy graphic interface
- Monitors three access points per door
- Dashboard security management tool
- Integrates with video management systems
- Multi-party control requires two valid cards to unlock the rack
- Remote lock, unlock, or lock-out of server racks
- Stores video logs of user activity
- Customized audit reports
- Plus FULL access control capabilities

S2 Netbox Supports Mercury Authentic Hardware

S2 Security Corporation, the leader in IP-based integrated physical security systems, has been a Mercury Security partner since 2010. S2 Security support for Authentic Mercury EP Series hardware allows users of legacy access control systems to easily transition to S2 NetBox® or S2 Enterprise® web-based systems without re-investing in new field hardware.

S2 Security supports Casi Micro/5 upgrades using the Mercury M5 Bridge. This replacement utilizes plug-and-play Authentic Mercury hardware that reuses existing Micro/5 enclosures, power supplies and wiring, providing a low-effort upgrade.

S2 Security support for Authentic Mercury hardware also enables seamless integration with Allegion Schlage AD-400 wireless locks. In retrofits, the AD-400 wireless locks, which do not need to run wires direct to each opening, can extend the reach of access control systems.

SARGENT 11 Line Bored Lock

SARGENT's Patented 11 Line lock sets a higher standard for Grade 1 bored locks. Its unique, T-Zone construction provides unequalled strength, durability and security by interlocking the lockbody and latch. Ideal for the most demanding environments within schools and hospitals to keep occupants and property safe and secure, the 11 Line easily exceeds ANSI/BHMA Grade 1 requirements for torque (2 times the standard) and cycle testing (18 times the standard). With 18 functions available, the 11 Line integrates into most existing facility's key systems and retrofits any standard cylindrical lock door prep. The 11 Line contributes to sustainability efforts with less lock replacements due to the long life and high post-consumer recycled content (68%). The design also simplifies facility maintenance and lowers the cost of ownership by utilizing a single lock body for all functions, requiring fewer inventoried parts. Flexible, durable, reliable — this lock can take whatever you give it.

Pedestrian Door Lock from Sargent and Greenleaf

The S&G Model 2890B Pedestrian Door Lock (PDL) from Sargent and Greenleaf Inc. (S&G), a division of STANLEY Security is designed to meet both the stringent needs of NFPA 101 life safety and high-security requirements for government applications. The lock is also designed for Sensitive Compartmented Information Facility (SCIF) applications for U.S. military, fusion centers, defense contractors and others. Designed to FF-L-2890B federal specifications to include a UL 3-Hour Single Door Fire rating, the lock is available in a variety of styles. Features include the ability to integrate the S&G Model 2740B electromechanical combination lock, as well as other combination locks approved to federal specification FF-L-2740B. Pinch-proof strikes are available for in-swing, out-swing and double-door applications.

Detex Delayed Egress with Latch Retraction

Advantex Delayed Egress with Latch Retraction (EExER) from Detex is designed for applications where both delayed egress and remote unlocking, remote dogging, access control or an automatic door operator is desired. An optional EX Request to Exit Switch may be added for push pad monitoring or LX Switch for latch bolt monitoring. The 100 dB alarm, will sound when someone attempts to exit but the door will remain locked for 15 seconds, deterring unauthorized exits and providing time to respond to the alarm. Ideal for restricted areas, access controlled doors, and any door requiring authorized entry or exit, while preventing unauthorized entry or exit. Perfect for fire-rated, cross corridor, access controlled, delayed egress doors with automatic operators, all without using magnetic locks or electric strikes. **www.detex.com**

4200 – The Electric Strike Game-Changer from Trine

The 4200 from Trine is THE cylindrical lock and deadlatch One Box solution. A 1 1/16" shallow backset works great in tight installations such as aluminum and concrete filled frames. This electric strike comes with 4 different faceplates in the box, which means you will always have the right plate for the job. Our low current draw and ability to accept 12 and 24 DC, 12-24 AC voltage means you never need to worry about power.

Trine has changed the market with the 4200's removable fascia. For decades, changing the faceplate finish (which you see 5% of the time) didn't mean changing the black ramp (which you see 100% of the time). Now the fascia and trim skirt can be changed to match the color of the frame making the best installation possible.

This electric strike has the tallest latch cavity in its class, nearly twice what the competition offers. This provides flexibility for installers with everyday door problems to make adjustments in the field and get off the job quickly. The flexibility of the 4200 is revolutionizing how electric strikes are perceived.

For more information and specifications on the new 4200 electric strike solution, visit the website below.

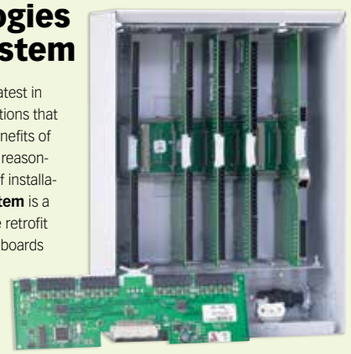
RS2 Technologies Step Up℠ System



The **Step Up℠ System** is the latest in RS2's line of access control solutions that allow customers to enjoy the benefits of an open platform approach at a reasonable cost and with a minimum of installation hassle. The **Step Up℠ System** is a reliable, easy-to-install hardware retrofit offering a simple board swap of boards currently installed in legacy systems. By using Authentic Mercury™ legacy replacement hardware, **Step Up℠** provides a "screwdriver-less" retrofit of outdated and unsupported installations that use proprietary hardware & software.

By working in partnership with Mercury Security, RS2 is able to provide customers who have previously-installed legacy systems with a solution that saves their entire investment in peripheral and network wiring, reader technology, enclosures, and power deployment. Labor costs are also minimized compared to entire system replacements. By using a **Step Up℠** replacement unit, customers can simply remove the connectors from the legacy board, remove it from the enclosure, replace it with the corresponding **Step Up℠** board, refit the connectors and power up. The bridged hardware is now open platform, reliable, and uses current technology. System downtime is also minimized, as all boards are "hot swappable," meaning that replacements or additions can be installed while the enclosure is powered up and running the system.

IN120 WiFi Locks from SARGENT and Corbin Russwin

The IN120 WiFi lock, available from ASSA ABLOY Group brands Corbin Russwin and SARGENT, offers the ease and flexibility of WiFi in a new streamlined design, setting a new standard for aesthetics and performance.

The IN120 enables more cost-effective installations, allowing facilities to expand access control to more doors. Ideal for use in hard-to-wire locations, the IN120 uses standard IEEE 802.11b/g/n Wi-Fi connectivity to connect to the access control system, significantly reducing installation costs, and eliminating the need for proprietary equipment. It features integrated ANSI/BHMA Grade 1 hardware, available in cylindrical and mortise lock configurations, with choice of black or white reader and a range of finishes and levers.

The IN120 uses HID® multiCLASS SE™ technology, which provides heightened security, supports multiple credential types, and enables NFC mobile access. The IN120 supports current Wi-Fi security standards including WEP, WPA, WPA2 and 802.1x and uses AES 128-bit encryption. In addition, the WiFi radio is field-upgradeable, making it future proof for evolving Wi-Fi standards.

The ASSA ABLOY IN120 offers a customizable feature set, allowing customers to select only the features they need or add features as their requirements grow. The IN120 also offers local lockdown and privacy mode capabilities on both cylindrical and mortise lock configurations. Adding to its versatility, the IN120 works with a broad range of industry-leading access control systems.

Keyscan Family of Products from Kaba Group

Keyscan, a member of the Kaba group, offers access control solutions for businesses, organizations, and institutions that provide a convenient platform to integrate with other components that manage and monitor building security.

Renowned for product quality and customer support, Keyscan systems are built on a foundation of versatility, flexibility, and scalability. Keyscan's team of professionals are dedicated to designing and building access control systems that address today's real-world security challenges. Every control panel is meticulously assembled and thoroughly tested before it's packed and shipped. And, Keyscan's access control management software applications offer a rich array of security features in an easy-to-operate layout. Whether your organization or business is a small regional enterprise or a multi-national corporation, with locations around the globe, Keyscan has the right access control solution that gives you total control from one system.

Kaba – Beyond Security

Kaba is a leading provider of high quality, innovative access management solutions, keys, cylinders, physical access systems, enterprise data, time recording systems and hotel access systems. The group is also a global market leader for high security locks, key blanks, transponder keys and key manufacturing machines. Corbin Russwin Access 700® IP-Enabled Campus Access Control Locks

Corbin Russwin Access 700® IP-enabled campus access control locks offer an ideal solution for forward-thinking campuses. Now featuring HID® multiCLASS SE™ technology, the Access 700 PoE and WiFi locks offer multi-layered security and simultaneous support for multiple industry-leading credentials. Ideal for mixed credential environments, these locks allow an easy transition from magnetic stripe to higher security technologies and are Seos™-enabled for use with NFC-enabled mobile smart phones.

Using the facility's Ethernet network, the Access 700 PIP1 Power over Ethernet (PoE) provides full online access control with standard network cabling and minimizes energy consumption. Ideal for adding access control to areas of a building that would be too difficult or costly to wire, the Access 700 PWI1 WiFi lock uses 802.11b/g/n infrastructure to significantly reduce hardware and labor costs.

Combined with ASSA ABLOY's PERSONA Campus™ software or with approved third-party software, Access 700 locks integrate seamlessly into transactional and housing systems, providing comprehensive, reliable access control for the campus environment. They integrate all standard access control components into a single device — ANSI/BHMA Grade 1 lock or exit device, controller, card reader, door position switch and Request-to-Exit sensor — and are available in mortise lock, cylindrical lock, or exit device configurations.

Alarm Lock's Trilogy Series with School Access Control Vulnerability Index

Alarm Lock offers the leading, largest line of electronic PIN/Prox access locks: Trilogy® and network-controlled wireless Trilogy Networx™ for all door types, locks and keypads. Ideal when budgets, time or hardwired-system capacity runs short, you can use the same HID Prox ID cards, yet deploy in an hour, downtime-free, a door at a time, at less than a thirrd of the cost.

Alarm Lock's Trilogy® Access Locks are ideal in case of emergencies, as these advanced wireless locks can provide schools, hospitals and business campuses immediate lockdown by pressing a button on a pocket-sized remote keyfob.

Alarm Lock's DL3200 standalone Trilogy Lock provides keyfob-activated classroom lockdown, from safely inside the classroom, with a typical range of up to 100'.

For a global lockdown solution that also eliminates door-to-door operations, Trilogy Networx™ can be locked down or unlocked campus-wide in under 10-seconds, from a keyfob, wireless panic button or from the school server.

SAVI, the Security Access-Control Vulnerability Index™ was created for security professionals to use as an objective, brand-agnostic audit tool to evaluate any school's access control vulnerability. On an easy electronic form, you simply enter the kinds of security in place to both get their score, plus next steps for improved security. To become a certified SAVI professional, call 1-800-ALA-LOCK for training or email SAVI@alarmlock.com.

Access Solutions from Marks USA

Marks USA was established in 1977 as a mortise lock manufacturing company that would meet the needs of an expanding market. Since then, the company has grown and expanded its' product line to include residential, institutional and commercial locksets to meet and exceed the most stringent UL and ANSI specifications. Marks USA has the capabilities to produce both standard and custom items. The company employs talented personnel who possess the ability to think "outside the box." This kind of thinking has given Marks USA its niche in the contract hardware industry. Marks USA's product lines include architectural grade, BHMA & UL code compliant mortise, cylindrical & tubular locksets, electronic access control, biometrics, hospital/life safety & anti-ligature locksets, ornamental iron locksets, HI-SECURITY™ cylinders, panic devices and door closers.

New Stand-Alone Card Reader from DoorKing

DoorKing has introduced a new, low cost, stand-alone card access system for single door or gate applications. The 1524 can store up to 1000 card codes and is easily programmed with a hand-held programmer.

The Model 1524 card reader is a single-door (or gate) low cost system that is ideally used in applications where card access control is desired, but there is no need for time zones, security levels or event reporting. The 1524 will store up to 1000 card codes. Card codes can be added or deleted in blocks or individually by using a small hand-held remote programmer, or by using programming cards.

Richard Sedivy, DoorKing's Director of Marketing stated, "The 1524 is a great option for people looking for a simple card access system. Dealers now have another option to offer their clients an easy to use, easy to program, low cost single-door access control device."

The 1524 is ideal for both indoor or outdoor applications and is available as a mullion mount reader, or can be ordered with a lighted enclosure for gooseneck post mounting.

For additional information, visit the company's website at the link below or contact the DoorKing Sales Department at 800-826-7493. DoorKing Inc., is one of the largest and oldest manufacturers of access control and vehicular gate operator products in the country.

SARGENT Passport 1000 IP-Enabled Campus Access Control Locks

SARGENT Passport 1000 P1 and P2 Power over Ethernet (PoE) and WiFi locks leverage existing network infrastructure to provide advanced security and easier, more cost-effective installations. Designed specifically for the campus environment, the IP-enabled access control locks feature HID® multiCLASS SE™ technology for a future-proof solution. With simultaneous support for multiple credentials, they offer an easy migration path to higher security credentials and NFC mobile access.

Recognized for its contribution to sustainable buildings, the Passport P1 re-uses existing IEEE 802.3af PoE infrastructure, streamlines the installation process, reduces costs and components, and minimizes power consumption. The Passport 1000 P2 uses IEEE 802.11b/g/n WiFi technology, completely eliminating any wiring, significantly reducing installation time and enabling access control in more locations.

Combined with ASSA ABLOY's PERSONA Campus™ software or with approved third-party software, Passport 1000 locks integrate seamlessly into transactional and housing systems, providing comprehensive, reliable access control for the campus environment. They integrate all standard access control components into a single device — ANSI/BHMA Grade 1 lock or exit device, controller, card reader, door position switch and Request-to-Exit sensor — and are available in mortise lock, cylindrical lock or exit device configurations.

CL3100 Series Lock from Corbin Russwin

Corbin Russwin's CL3100 Series is the ideal solution for the toughest environments within education and healthcare facilities. With unique, patented T-Zone lock construction where the lockbody and latch tube interlock in the critical twist area, the CL3100 will last the lifetime of a facility. Tested to over 15 million cycles and over 3000 inch lbs. of torque, the vandal resistant lock provides strength and durability that easily exceeds ANSI/BHMA Grade 1 requirements for torque and cycle testing. And, because few components are required when changing the lock function, the design simplifies facility maintenance and lowers the cost of ownership.

Available in 18 functions with 12 hardware finishes including an anti-microbial coating to supplement cleaning protocols for healthier environments, the CL3100 Series integrates into most existing facility's key systems and retrofits most standard 161 cylindrical lock door preps.

In addition, the CL3100 Series contributes to your sustainability effort with less lock replacements due to its long life and high post-consumer recycled content.

Flexible, strong, and durable — this lock can take whatever you give it.

Dynalock 3101C Series Delayed Egress Lock

DynaLock Corp. is pleased to announce the launch of a Third-Generation, redesigned 3101 Series Delayed Egress Lock — The 3101C Series.

Hallmarks of the 3101C design include a complete electronics update, incorporating the following significant enhancements:

- 12/24 VAC/VDC auto-input voltage detection.
- Up to 49% reduced current draw.
- Advanced residual magnetism mitigation circuitry.
- Full, backward-compatibility of circuit board with 3101B Series legacy product.
- Field-programmable firmware, via on-board USB interface (Legacy product currently requires hardware re-purchase, to modify firmware, to address special code/sequencing requirements).

The 3101C is mechanically-identical to the current 3101B Series Delayed Egress Lock. Mounting procedures and templating remain unchanged, to facilitate retrofits of existing 3101B Locks. As the 3101C's terminal layout is identical to the 3101B Series, wiring procedures will also be transparent to experienced 3101B field technicians.

With the introduction of the 3101C Series, all production of the outdated 3101A Series, first-generation lock will be discontinued as/of April 1, 2014. Returns will continue to be serviced under the terms of the DynaLife® Lifetime Warranty.

New purchase orders for 3101B Series Locks after March 1, 2014 will be upgraded to the 3101C Series product, at no additional cost to the customer. The 3101B Series will remain available upon specific request and for OEM partners, until further factory notice is given.

WinDSX AES-256 Encryption Software

The WinDSX AES-256 encryption software from DSX Access Systems contains government approved AES-256 bit encryption technology that can be implemented system-wide.

Encryption capabilities are built into the software and every field controller. For example, communications to each Location in WinDSX AES-256 can optionally be encrypted with a unique encryption key assigned by the customer for communicating with that Location's field controllers.

This is but another tool for DSX Integrators in meeting government requirements and FIPS compliancy just like the recently achieved UL 1076 listing.

Once purchased and enabled in the DSX Features Key, there is an Encryption Key that can be implemented to encrypt communications between the Comm Server and the Workstations.

There is also an encryption key that can be implemented optionally and individually for each location. Once communication is encrypted from the Comm Server to the Master Controller, the encryption is propagated to all controllers in that location.

Farpointe Data Long-Range Identification Receivers

Users of Forpointe Data's new WRR-22 and WRR-44 433 MHz receivers can use either two-button or four-button transmitters to open two or four different doors from ranges up to 200 feet (61 m). Each button outputs transmitter data over separate Wiegand outputs, yet the receiver installs just like a Farpointe Pyramid Series proximity reader for easy integration with popular proximity or contactless smart card access control systems. Available in either a two- or four-button configuration and equipped standard with a weather-resistant potted proximity or contactless smart card module, the transmitter can be used as a presentation-style access credential. Using standard 26-bit Wiegand protocol and featuring standard mounting holes, they can be used as "add-on" or "wire-in" receivers. **www.farpointedata.com**

Liberty CUBE Access Control from Viscount Systems

The Liberty CUBE web-based access control network appliance from Viscount Systems is designed to provide web-based access control for small- to medium-sized installations with up to 32 readers. Intuitive and easy to use, the solution simplifies access control with a cost-effective, all-in-one appliance. A true IP solution with no proprietary control panels within the system, it enables each card reader to become an IP device on the network that is operated through a compact web appliance. With the solution, there is no need to purchase expensive door control panels. It is available as a 16- or 32-door bundled appliance, and includes features such as emergency mustering, elevator control, video integration and robust I/O configuration.

Dortronics 107xD Maglock and 1107xEDR Delayed Egress Actuating Maglock

The 1107xD maglock and the 1107xEDR delayed egress actuating maglock from Dortronics Systems can be used for a variety of door and frame types. Both units deliver fail-safe operation, releasing instantly upon command or loss of power. The 1107xD is designed to fit narrow style header applications. Its 1¼-inch depth reduces the need for angle mounting brackets and filler plates. An onboard concealed door position switch can be used to report door status to an access panel or door prop alarm. The 1107xEDR operates with the 7101-P Delayed Egress Panel and is designed with a field-adjustable actuator that senses door movement. Both are NFPA 101 and BOCA compliant and are UL 294 access control certified.

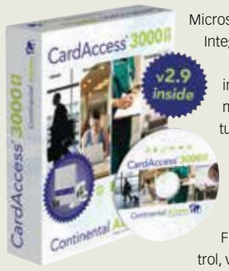
CA3000 Enterprise Security Software from Continental Access



Continental Access, a division of Napco Security Technologies Inc., has released CA3000 version 2.9 software that not only provides robust access control functionality and seamless integration with alarms, locking and a growing list of video systems, but offers a host of many sought-after features, including the ability to run the CardAccess 3000 and associated applications as Windows services and the ability to control access to the CardAccess GUI using Lightweight Directory Access Protocol (LDAP).

Support for the Continental's new and robust Super-Speed 16-door Accelaterm Controller is also available. Plus, more video integration partners have been added to their growing list, now including Pelco, HiTron, Milestone, Dedicated Micros, as well as Salient and Integral.

New CA3000 v2.9 also includes many enhancements to the existing features, providing the front-end of Napco Fusion, it is the complete seamless interoperable solution for Gemini Intrusion & Fire Systems, access control, video and wireless locks.

The CardAccess 3000 version 2.9 software also provides additional support for sister division, Alarm Lock's Trilogy Networx locks, now in both cylindrical and mortise models, with the utilization of a Door position contact and Request To Exit (RTE) button feature.

Continental offers training classes across the country and free online webinars, as well as retrofit rebate programs and cost-saving software upgrade plans.

Sargent 80 Series Exit Device with Lock/Unlock Indicator

Ideal for use in educational facilities on wood or metal doors, the Sargent 80 Series rim exit device offers an easy way to lock the outside trim from the inside without opening the door and putting people in harm's way, providing the best combination of durability, simplicity, strength, aesthetics and innovation.

The Lock/Unlock Indicator option (49-) provides a visual means of determining if a door has been secured by the cylinder on the inside of the room. Available on new or existing devices with a double cylinder function, the visual display eases concerns about knowing if doors are locked because the indicator reminds the occupants.

The indicator is located on the exit device chassis displaying a red icon when the device is locked and a white icon when the device is unsecure.

The indicator is housed in the chassis cover with no protruding parts and a clear window to protect it from wear and abuse so the indicator cannot be forced or bent or interfere with the function of the device.

RemoteLock from LockState

RemoteLock from LockState gives you remote control of your door lock over the internet from your PC or smartphone. The RemoteLock replaces your existing lock and connects to the Wi-Fi router already in your home. This Wi-Fi connected smartlock gives you the ability to check the lock status and lock or unlock remotely from anywhere in the world. From your online account, you can add and delete access codes, set access schedules, and check access history. RemoteLock is part of the LockState Connect product line. Founded in 2004, Colorado-based LockState brings the power of the internet and remote control to common devices such as door locks, thermostats, power plugs and more so that home and business owners can stay connected with their properties. **www.lockstate.com**

Two-Door Access Control System from Vanderbilt Industries

Vanderbilt Industries' lite blue two-door web-based access control system features the same easy-to-use software as the company's bright blue Intelligent Access Management System and is easily upgradeable to a full 32-door system. Lite blue controllers include two on-board reader interfaces, thereby allowing for easier installation and enhanced cost savings. Built on the Authentic Mercury controller platform, it supports standard Wiegand devices, Schlage AD Series electronic locks, and various card formats and technologies such as proximity, smart card, magnetic stripe and Bluetooth. It does not require special software or a dedicated PC. Key features and benefits include support for up to 2-8 doors and 5,000 cardholders; remote access via web-browser; single action facility lockdown via credential, external push-button or software; and email event notification. **www.vanderbiltindustries.com**

Secura Key's NOVA.16 Four-Door Access Control Kits

Secura Key now offers four-door Access Control Kits featuring its 16-door control panel, NOVA.16, at a discounted kit price. The four-door kits include the NOVA.16 control panel, SK-NET software, a DC power supply and four Smart Readers. All users need to add is cards, cabling and door locking devices. Kits are available in either Radio Key/HID Dual Technology proximity or e*Tag contactless technologies in either mullion or wallswitch style readers. Nova.16's system architecture provides significant reductions in installation labor and cabling costs by eliminating home run cabling back to the control panel. The Smart Readers support all the local connections at each door and only require data and 12 VDC reader power from the control panel, which can be daisy chained from reader-to-reader. **www.securakey.com**

Geared Continuous Hinges from Select

Do your customers complain about a "problem door?" Chances are, the problem isn't the door. Or even the lock. Fix the real problem — worn out butt and pivot hinges — and deliver total door service with SELECT geared continuous hinges. A SELECT geared continuous hinge surpassed 25,000,000 open/close cycles in laboratory testing — equivalent to 60 years of high-traffic use and 10 times beyond BHMA Grade 1 cycle count. That's why we can offer the industry's only Continuous Warranty™, a warranty that never expires. SELECT hinges eliminate hinge repairs forever and are ideal for high-traffic doors in retail storefronts, schools, convention centers, sports facilities, airports and other public buildings. Call 800-423-1174 or visit **www.select-hinges.com.**

System Galaxy v10.4 Access Control Software

System Galaxy Access Control Software v.10.4 from Galaxy Control Systems features a range of enhancements including: Support upgrades for integration with ASSA wi-fi locks, inclusion of a DSI-based RS485 input module to reduce cost of installation and provide faster data rates, and a log distributor to support SSL SMTP mail servers such as Gmail. System upgrades include an internal rework for more robust services, and improvement of error behavior when the database connection is severed. Galaxy Systems' new TCP/IP network appliance comes with System Galaxy v.10.4 embedded, which dramatically reduces installation time. By launching a shortcut from any LAN-connected PC, users can connect to the network appliance, which are pre-configured and offer support for a predetermined number of doors. **www.galaxysys.com**

NAPCO Commerical Addressable Fire or Gemini Combo Burg/Fire Systems

Napco Security Technologies Inc.'s Commercial Platform is a full line of Commercial Fire or Combo Intrusion/ Fire Systems configurable for wireless, hardwire, analog, addressable or conventional technology devices.

Now offering speedier setup and installation with new Quick-Start faster programming, the UL commercial grade wireless fire & Burglary devices are installed in a fraction of the time. There is a new fire-only program menu and standard fire alarm system preset template you can build on. All you will need to do is enter the quantity and type of devices — they will be auto-inserted, mapping inputs to outputs that are clearly color-coded.

Auto-Learn discovers and identifies addressable devices on loops. It will preload descriptions, e.g.,"smoke detector" — and list the quantity of modules, sensors and relays for each. Fast Track Diagnostics automatically distinguish minor warnings from critical errors. Enhanced battery and voltage calculators are also included.

The NAPCO Commercial Platform includes built-in labor savings, incredible power, and feature-rich value that's easy to plan-out and standardize on for 255, 128 or 32 points of commercial wireless, analog addressable and/or 12V conventional installations; and it is fully compliant with the most rigorous industry standards, including UL864 9th Ed., NFPA72, SIA CP01 and more.

Features include easy AHJ calcs; up to 32AH standby separate for burglar and fire; and remote/onsite uploadable smoke sensitivity reporting.

All-in-One Alarm Panel from Honeywell

Honeywell's LYNX Touch 5200 all-in-one system allows dealers to offer an enhanced user experience while reducing costs. Consumers can view live, IP video on-demand directly on the panel's 4.7-inch vivid color touchscreen. In addition to two-way voice over GSM, the unit offers two-way voice over Wi-Fi, which streamlines installation. The Honeywell LYNX Connect app enables users to view live video feeds and control systems from an iOS or Android device. The unit supports single-camera viewing when used with Honeywell Total Connect Video products: the iPCAM-PT, iPCAM-WO, iPCAM-WI2/B and ACU. With the exclusive Honeywell LYNX Connect app, users can also view live video feeds and control their systems from an iOS or Android device, even without a Honeywell Total Connect account.

Fire Suppression Solution from Mircom

Mircom's FX-3500 Intelligent Fire Alarm & Suppression Systems include powerful and intelligent fire alarm control units, which support Advanced Protocol (AP) as well as Classic Loop Interface Protocol (CLIP) devices. The control units are UL 864 Rev 9 and ULC S527-2011 listed for fire control and releasing service. Recommended for both new and retrofit special-hazard, critical-infrastructure suppression, and special agent applications, the units are ideal for industrial, commercial and institutional buildings. The units are fully expandable, providing up to three addressable Signal Line Circuits (SLCs) and can connect up to 954 addressable devices or points. The systems can be operational with minimal set up time and can be configured using an onsite laptop or through a remote PC via an on-board modem.

Honeywell's SWIFT Wireless Fire Sensing System

Honeywell's Smart Wireless Integrated Fire Technology (SWIFT) detectors and modules seamlessly integrate with new and existing fire alarm systems from Fire-Lite Alarms, Gamewell-FCI and NOTIFIER to protect challenging applications and high-cost installations, as well as building expansions. Using a Class A mesh network where every device acts as a repeater with redundant path communication, SWIFT systems are robust and self-healing, making them a highly-reliable fire detection solution. Once a mesh network is formed, a restructuring automatically occurs to find the strongest paths within the network. Unique mesh IDs in each SWIFT network prevents miscommunication with other devices and inherent frequency hopping prevents system interference. The elimination of wires leads to more flexibility in installation. **www.honeywelllifesafety.com**

Potter's PFC-6000 Series Fire Alarm Control Panels

Potter's PFC-6000 Series fire alarm control panels utilize state-of-the-art addressable sensors and control modules that provide flexibility to tackle demanding applications. Every PFC-6000 Series fire panel comes equipped with an on board IP communicator that allows for multiple communication paths without requiring additional expensive hardware and connections. These panels are also email ready and can send and receive email commands, letting you know your current system status, when to schedule your next inspection, or when to purchase new batteries. Potter's own panel configuration software allows custom programming for all points using a network computer if connected to a WAN or LAN, or with a standalone computer. It allows you to fine-tune device behavior characteristics or create mapping zones using a simple drag and drop interface. **www.pottersignal.com**

Waterflow Detectors from System Sensor

The WFDN Series Waterflow Detector from Systems Sensor is fully redesigned to meet the needs of today's fire sprinkler professional. New features include a timer dial, cover, and terminal blockm which add convenience and save on installation time. The timer dial is a first for waterflow detectors with a built-in time delay. Not only is it large and easy to turn, but its high-contrast, pad-printed markings and tactile features make it easy to set by feel in dimly lit or hard-to-reach locations. The detector's built-in time delay mechanism is still immune to dust and other contaminants, but now it is also designed for improved timer accuracy and repeatability. **www.systemsensor.com**

Trine 4850-ITL: The Ultimate Installation Tool for Electric Strikes

Trine's 4850ITL is the best tool for installing electric strikes ever developed. This tool and was designed to install the entire 4800 series line of strikes quickly and accurately the first time.

The 4850ITL is not just a template, and it's far more advanced than a simple steel plate with holes. It's made from actual production parts giving the installer the ability to adjust for common door issues such as sagging and misalignment. By placing the ITL on the frame, it allows the installer to "feel" the strike working with the door and panic device allowing for fine adjustments BEFORE holes are drilled.

The flexibility and therefore accuracy of the 4850-ITL is derived from our patent pending magnetic holding system built into the body of the tool. Combine this with a custom center punch that is included with every 4850-ITL to make perfectly centered marks on the frame; this tool is a must for every installer of electric strikes.

Search "4850ITL" on Youtube™ to watch the video and see the difference for yourself, or visit the website below.

Platinum Tools 10Gig Termination Tool

Platinum Tools' Tele-TitanXg 2.0 (p/n 12516) 10Gig termination Tool combines two crimpers into a single tool, making two-step crimping simple. The tool, along with the supplier's 10-gig shielded connectors, are engineered specifically for Cat6A cables to provide true 10Gig performance and improves efficiency by not having to change out tools in the middle of a termination. With a compact and rugged design, it terminates to industry-specified crimp heights, while its straight action crimp is achieved with minimal hand force. The non-slip handle and finger grooves are designed for comfortable grip and control, and it includes a gun-style lock for secure closure. **www.platinumtools.com**

Power Supplies

Surge Protection from Middle Atlantic Products

Series Protection and 2-Stage Compact Surge Devices from Middle Atlantic Products are compact, standalone surge protection devices that safeguard against both under- and over-voltage events with automatic recovery that does not require a hard reset after a surge event, minimizing system downtime. Ideal for security monitoring centers, both devices can power and protect displays, extenders, digital signage players and more. The Series Protection system is engineered with non-sacrificial and non-degrading protection to ensure system reliability by effectively absorbing surges without contaminating the system ground. The MOV protected 2-Stage unit is a compact standalone surge protection device that deflects surge events from line to neutral without contaminating the system ground. **www.middleatlantic.com**

Minuteman Ruggedized UPS

Para Systems Inc.'s Minuteman ERS1500RTNC is a ruggedized uninterruptible power supply (UPS) designed to provide protection to support traffic control and monitoring equipment, servers, telecom equipment, VoIP systems, security systems and a variety of other applications. It is a line-interactive unit with a capacity of 1500VA and 1050W. With versatile rack/tower/wallmount options and its ability to withstand extreme temperature environments, the unit is optimal for a wide range of installation spaces and is designed to efficiently operate in extreme temperature environments. High-temperature batteries and temperature-compensated charging combine to provide an operating temperature range from +5 to +122°F (-15 to +50°C). Additionally, each unit has conformal coating on all electronics that resists corrosion in high humidity installations. **www.minutemanups.com**

Strattec Key Blanks for 2014 Chevrolet Silverado and GMC Sierra

General Motors has revised the head of the ignition/door keys for the 2014 Chevrolet Silverado and 2014 GMC Sierra. These keys are STRATTEC part numbers 5924205 (Silverado) and 5924206 (Sierra). The photo on this page shows the new heads. It was a running change on the part of GM and we are now out of stock on the old style heads so we are only shipping the new heads at this time. We now also offer the 7013237 which has the GM Corporate logo for the Sierra and Silverado. There is no change to the programming and they still remain a "10 Cut" design. Continue to order the same part numbers as they have not changed either. All current GM part numbers can be found along with the applications at: **http://aftermarket.strattec.com.**

Ford RKE Remotes from Strattec

STRATTEC is pleased to introduce two Ford compatible RKE remotes into the locksmith market. These remotes are both 3- and 4-button configuration and replace fobs from 1995-2013 vehicles. These remotes cover Ford, Lincoln, Mercury and Mazda vehicles and can generally be programmed with on-board procedures or an aftermarket tool. Instead of shells or refurbished remotes, you can now give your customer a completely new Ford remote from STRATTEC. Most Fords use general on-board programming instructions (where applicable) and can be found on our website. Some remotes may require dealer or aftermarket programming tools. All current Ford part numbers can be found along with the applications at **http://aftermarket.strattec.com**

Offering your customer a STRATTEC key or lock means they're getting nothing less than the best. As an OE-licensed aftermarket supplier for Ford, General Motors, Chrysler and more, STRATTEC helps locksmiths build better customer satisfaction in two important ways:

- **BETTER QUALITY.** Chances are, we engineered and manufactured the original keys you are replacing. A STRATTEC replacement upholds the same rigorous quality standards that OE manufacturers demand.
- **STRONGER SUPPORT.** Generations of locksmiths have come to trust the superior quality and ready availability of our technical support and product information, as well as our long-standing commitment to locksmith training.

Don't let yourself be lured away. Always insist on genuine STRATTEC keys, locks and pinning kits.

Enterprise Security & Integrated Systems

Detex EasyKit Systems

The Detex EasyKit catalog number specifies everything you need for virtually any application, with one price and no problems. Illustrated here is the AODx10ERx1S-1 Automatically Operated Door EasyKit, which integrates the Advantex latch retraction exit device with Detex's low energy, automatic operator with pre-wired, built-in latch retraction power supply. Also included are two wireless ADA activation buttons, a power transfer, code-compliant signage and an easy-to-follow wiring diagram, helping make installation easy and mistake-free. The Detex AODx-10ERx1S-1 was designed by our customers for applications at assisted living homes, airports, healthcare, shopping centers and any application where access control and a low-energy, automatic operator is required. Choose a pre-wired EasyKit System, or work with Detex to create your custom EasyKit. **www.detex.com**

Situational Awareness Platform from Gamewell-FCI

Gamewell-FCI by Honeywell's Focal4 Shared Situational Awareness (SSA) system streamlines facilities' day-to-day operations and greatly improve response to emergencies in buildings used for education, local government, healthcare, utilities, critical infrastructure, large retail, transportation and other commercial organizations. The software platform is able to aggregate information from all brands and variations of systems, including access control, video, fire alarm, HVAC, traffic, mobile devices and more. Its open architecture and scalability make it easy to implement and a great value for small facilities as well as multi-building complexes around the world. It provides a comprehensive picture of all events in and around a facility or campus, enabling security directors, emergency management officials and first responders to make fast, accurate emergency response decisions. **www.Gamewell-FCI.com**

Threat Detection Technology

Portable Explosives Trace Detector from Smiths Detection

Smiths Detection's IONSCAN 600 explosives trace detector is designed for use in global aviation and critical infrastructure security. The small, portable design features a proprietary non-radioactive Ion Mobility Spectrometry (IMS) source which eliminates the need for special licensing, handling or disposal requirements. The unit's hot-swappable battery provides continued sampling and analysis capability, allowing it to be moved while still in use. Low-cost, single-use test swabs reduce operator costs. The unit weighs just 23 pounds (10.4 kg) and is equipped with a built-in handle for easy carrying. It fits into a layered security approach, delivering the detection capability needed, while helping security professionals minimize overhead through its user-friendly configuration, flexibility and cost advantages. **www.smithsdetection.com**

Handheld Explosive Trace Detection from Rapiscan

Rapiscan's DETECTRA HX is a lightweight handheld, explosive trace detection solution. It is designed with high throughput and high detection capabilities that are essential for law enforcement, event and border protection professionals and more. The unit is easy to operate and is capable of detecting trace explosives in both particulate and vapor form. For more sensitive, accurate and rapid detection, it offers a swipe sampling system and includes a touch-free inhalation sampling method for highly unpredictable explosives compositions. The unit can detect a broad range of common commercial and homemade explosive materials that may exist within a single sample. **www.rapiscansystems.com**

Letter and Parcel Inspection Unit from Ceia USA

CEIA USA's EMIS-MAIL IED detector for letter and parcel inspection is designed to detect a wide variety of metal threat items including detonators, batteries, trigger circuits and other metal components of parcel bombs without false alarms for non-threat items such as metal staples, paper clips and metal binding spirals. The unit provides a fast and automatic alarm/no alarm signal confirmation per each inspected package. An optional embedded radioactive detector is also available for radioactive material threat detection. The unit is compliant with the NIJ-0602.02 Department of Justice Detection requirement standard. **www.ceia-usa.com**

Non-Radioactive Trace Detector from Morpho Detection

Morpho Detection recently launched its next-generation desktop explosives trace detector (ETD), the Itemiser 4DX, which delivers explosives detection and screening capabilities powered by a non-radioactive ITMS (Ion Trap Mobility Spectrometer) source. The unit eliminates the administrative, regulatory, storage and shipping requirements associated with a radiation-emitting trace detection source. A lightweight, portable desktop system, it uses a long-lasting battery to enable rapid deployment between locations without powering down. The product seeks to minimize operational costs for airports and air cargo facilities, law enforcement and government and critical infrastructure installations. **www.morphodetection.com**

WE MADE ALAN AN ACCESS CONTROL ACE

SECURITY LOCK DISTRIBUTORS HOOKED HIM UP WITH THE SMARTEST SOLUTION.

Alan finally got the PO to upgrade the access control system at his customer's facility. But he wasn't sure where to start. Biometric systems, electronic locks, RFID systems…the options were endless. So he talked to a technical sales expert at Security Lock Distributors, who helped him select a cutting-edge solution that respected the job specs and integrated perfectly with his customer's existing systems.

Evolving technology, expert knowledge.
