HID Signo Access Control Readers

The future of access control is here.

Meet Signo, the signature line of access control readers by HID Global. HID Signo™ readers offer cutting-edge security technology within a sleek, upscale design.

Versatile – HID Signo readers are highly versatile, providing support for the widest range of credential technologies. This new line of readers is mobile ready with native support for BLE and NFC phones, wall switch or mullion form factors for readers and keypads, and enhanced contactless polling to support credentials in Apple Wallet. Easy to order and install, Signo delivers support for today's credentials along with the ability to upgrade effortlessly.

Secure – Get best-in-class security and unparalleled efficiency with HID Signo with ultra-secure cryptographic keys on certified secure element hardware. Reliable in even adverse conditions with an IP65 outdoor rating and providing protection against brute force attacks, Signo provides optimized performance and read range for powerful access control and a superior user experience and the ability to reduce energy consumption with Intelligent Power Mode (IPM).

Connected – HID Signo readers feature market-leading hardware and are connected to the future out-of-the-box. Signo offers new capabilities through firmware upgrades. With OSDP support for secure bidirectional communication, Signo is designed to be connected and managed remotely. Easily migrate and access the choice and flexibility that comes along with the widest global network of channel partners.

Hikvision Performance Series Thermal Cameras

Hikvision has launched its Performance Series Thermal Cameras – taking thermal imaging from niche to mainstream.

Designed for short-range detection, these cameras are best suited and priced for residential, commercial and industrial areas. The thermal-optical turret camera (model DS-2TD 1217-2/V1) combines wide-angle thermal and optical cameras with thermal imaging-based fire detection, temperature monitoring, cigarette smoking detection, DeepinView intrusion detection and abnormal sound detection.

The 160x120 vanadium oxide thermal detector provides Hikvision's outstanding thermal image quality upscaled to an output resolution of 320x240 with a dramatically downscaled cost. This camera is more advanced and half the price of Hikvision's previous low-cost model.

Cloud-Based Smart Lock Management and Access Control from RemoteLock

EdgeState from RemoteLock is a cloud-based platform for smart lock management and access control.

The software provides complete access control for properties of any size and controls Wi-Fi and Z-Wave smart locks direct from the cloud without the need for a control panel. For applications that require a mix of hardwired access control and wireless locks, EdgeState can control both panels and wireless locks from a single platform to manage all door types, credentials and lock-specific needs. Combine wired access control systems using Mercury Security panels with Wi-Fi and Z-wave locks from brands like Yale, Schlage, Kwikset and more.

Earn recurring revenue on every door that is connected to the EdgeState platform, including perimeter doors, interior doors, garage doors and even elevators. RemoteLock handles recurring billing so you can focus on what you do best.

EdgeState opens doors across the world more than 100+ million times per year, secures doors in more than 65 countries and engages with more than 40+ million users each year. It is used in installations controlling access control panels alone, panels plus a combination of wireless locks from major manufacturers and in installations using wireless locks alone.

DoorKing 6006 Swing Gate Actuator

The DoorKing model 6006 is a versatile swing gate operator system that can operate gates up 1,600 lbs., or up to 18 feet in length – making it ideal for both residential and light-duty commercial applications.

The actuator can be left- or right-hand mounted and can be set for pull-to-open or push-to-open operation. The 6006 actuator operates on 24 Volt DC power and features built-in limit switches that precisely control the start/stop speed and travel of the gate.

The microprocessor-based electronic control board provides many advanced features typically not found in operators in this class. The control box can be powered by 120 Volt AC, which is then converted to 24 Volt DC to power the actuator and control board. Two 120 Volt control boxes are available to choose from, Deluxe and Standard. The Deluxe control box includes three 120 VAC outlets to power accessory transformers.

Both include 3.5 Ah (Amp Hour) batteries for back-up power operation. You can also select our Solar Powered control box, which eliminates the need for high voltage power runs.

The 6006 is American made – designed and built at DoorKing's manufacturing facilities in Inglewood, Calif.

DynaLock Series 3101C-G2 Delayed Egress Lock

The redesigned, second-generation DynaLock Series 3101C-G2 Delayed Egress Lock incorporates a new, enlarged LED lock status indicator arrangement.

Rather than a single, T-1 ¼ bi-color LED mounted to the stamped aluminum housing cover of the original 3101C, the 3101-G2 utilizes a high-brightness SMT LED status indicator array, which projects through

a wide translucent lens in the face of a new injection-molded polymer housing cover. This new flame-proof polymer cover comes in a standard matte black finish identical to our armature housing and features a recessed US28 satin aluminum finish faceplate. This faceplate may also be finished to match any of our optional special architectural finishes when a lock is ordered as such.

The 3101C-G2 also adds an optional new, redundant delay egress alarm relay output (AAO – Auxiliary Alarm Output Option). It provides an isolated set of SPDT, Form C output contacts, which duplicate the function of the standard Delay Egress Monitor output. All other mechanical, electronic and templating attributes remain unchanged from the original 3101C. Models configured for single and double out-swinging, double egress and single in-swinging doors are offered and backed by our DynaLife® PLUS lifetime warranty.

ANSI-ITL for the Best and Easiest Installation of Trine Electric Strikes

Trine's ANSI-ITL is the best way to install both 4-7/8" and 2-3/4" Trine Electric Strikes. Lean and efficient, it utilizes only two pieces each (screwed together) for the 4-7/8" and 2-3/4" cutouts, which means fewer lost parts. The installation tool can be used with the 4100, 4100DBDL, 4200, EN400, EN435, EN430 electric strikes as well as 478,

478X, 234, and 234X installations on the 3000 series.

Adjustments on the installation tool allow for installation even on the lower cutout of the Schlage L series – for use with the 4100 and 4100 DBDL. Additionally, the tool includes a scribe pen for accurately marking the cut-out lines on the frame. Two mounting screws for the tool is also included.

Please note the ANSI-ITL replaces the older 478-ANSI-ITL model number.

The ANSI-ITL is fast, easy, and accurate. Ask your distributor how you can get yours today.

EA Series Door Prop Alarm from SDC

Improve security with a cost-effective EA-708 door prop alarm from SDC. All of SDC's door prop alarms feature audible sirens with adjustable timer settings, two outputs, bypass status indicator light,

and vandal-resistant aluminum construction. Available to install in single gang or double gang enclosures, SDC door prop alarms also offer optional Push-To-Exit buttons and Cylindrical and Mortise Reset/Bypass Switches.

- Adjustable Timed Delay
- LED Indicator
- Exit Alarm on Door Opening
- Optional Key Reset/Bypass Switch
- Automatic or Manual Alarm Reset
- Optional REX Push Button
- Output Relays
- Compact Universal Mounting

With a visually appealing and functional design, SDC Door Prop Alarms are compatible with all access control systems but can also function as a stand-alone solution. Now you can support positive access control and security behavior by students on campus and employees at facilities.

Do you have a sneaking suspicion your doors are open? Stop door propping, "tailgate" sneak, and start securing.

Precision Hardware 2110VI Exit Device from dormakaba

The new Precision Hardware Apex 2110VI Series from dormakaba is a code-compliant safe egress with visual and directional indicators for faster and more efficient security lockdown designed for high-occupancy areas including classrooms, auditoriums or gymnasiums.

This panic device incorporates the ANSI "10" function, also referred to as the "Intruder Function," with new lock/unlock status. A directional indicator is integrated into the housing and contains reflective materials that may be seen in low-light conditions. It also features an embossed directional indicator that offers quarter-turn (90°) activation to enable faster lock down.

"The 'Intruder Function' enables the ability to lock the exterior exit device lever handle on the outside of the respective door from the interior side without the need for opening the door," said Michael McCoy, Product Manager. "Users can quickly determine if the outside lever is locked or unlocked. They don't have to open the door to verify, which would place personnel and students at greater risk."

A directional indicator feature provides the user a clear and concise understanding of what direction to rotate the key or thumb-turn for lock and unlock of the outside lever. The Apex 2110VI directional indicator is embossed within the assembly eliminating labels that can peel or fade.

HANDS FREE DOOR SOLUTION

Never Touch A Door Again: Bathrooms, Entrances, Offices.

SDC's Hands Free Door Solution meets the need for public health and safety. A wave of the hand in front of the 474U Sanitary Touchless Exit Switch activates the Auto EntryControl™ Low Energy Swing Door Operator for entry or egress. Never touch a door again on the way in or out. Also, great for hospitals, labs, cleanrooms, food processors and facilities where contamination control is required.

AUTO ENTRYCONTROL™

AUTO336V Low Energy Swing Door Operator with 1Amp + Power Output & Sequencer

- Easy, One-Man Installation
- Single Button, Self-Tuning Setup
- No need for a separate Power Supply
- Non-handed, Push & Pull arms, spindles included
- Hold Open Feature
- Plug N Play

* Building code enforcement relating to automatic doors and switch placement varies across the country - even with national ANSI and ADA standards. Consult your local Authority Having Jurisdiction (AHJ) for compliance requirements.

Cloud-Based Smart Lock Management and Access Control from RemoteLock

EdgeState from RemoteLock is a cloud-based platform for smart lock management and access control.

The software provides complete access control for properties of any size and controls Wi-Fi and Z-Wave smart locks direct from the cloud without the need for a control panel. For applications that require a mix of hardwired access control and wireless locks, EdgeState can control both panels and wireless locks from a single platform to manage all door types, credentials and lock-specific needs. Combine wired access control systems using Mercury Security panels with Wi-Fi and Z-wave locks from brands like Yale, Schlage, Kwikset and more.

Earn recurring revenue on every door that is connected to the EdgeState platform, including perimeter doors, interior doors, garage doors and even elevators. RemoteLock handles recurring billing so you can focus on what you do best.

EdgeState opens doors across the world more than 100+ million times per year, secures doors in more than 65 countries and engages with more than 40+ million users each year. It is used in installations controlling access control panels alone, panels plus a combination of wireless locks from major manufacturers and in installations using wireless locks alone.

SDC EntryCheck E75 Privacy lock

The SDC EntryCheck E75 Privacy is a low-cost, indoor/outdoor standalone electronic battery powered solution, providing controlled access for basic and multi-level high security requirements. It is perfect for new or retrofitting of fast food, service station or convenience store restroom facilities – it is battery powered (4 AA), so no wiring or power supplies required. It is also a cost-effective addition to educational or corporate campuses to provide a privacy function to board rooms, counseling rooms and meeting spaces.

Customers or employees can be provided an access code to enter on the keypad to access the room and simply push the inside red button when the door is closed to activate the privacy function. The red outside LED flashes to indicate room occupation. When turning the inside lever to leave, the privacy function is deactivated and the lock is ready again to accept another user.

Signage clearly indicates status and function, so no user instructions are required. An internal timer disengages the privacy function to make the room available for a new occupant, and an auxiliary relay signals management that the occupant has exceeded the time limit. Management can override the privacy function in case of emergency with a key or master code or to clear room occupants who have overstayed their welcome.

A prox reader version is also available. It is easy to install and retrofits to existing lock door prep. It is heavy duty ANSI Grade 1 and is weather and vandal resistant. For more information, call 1-800-413-8783 or visit the links below.

PaxLock Pro Latch Wireless Door Handle from Paxton

The PaxLock Pro – Latch is a smart lockset from Paxton Access designed for quick and easy installation to conveniently secure internal doors. Available in black or white with an Eclipse or Galaxy handle, the lock is ideal for education and health-care facilities, as well as commercial premises like corporate offices, warehouses and retail outlets. The robust unit is UL-294 rated for reliability of construction, performance and operation, ensuring it is built to last.

The universal design enables quick and simple installation for Paxton's dealers, and the smart, compact appearance means it is likely to be popular with end-users. The product is flexible for dealers and their customers, with the option to install either standalone, without a network, or as part of Net2, Paxton's flagship networked access control system.

The new unit has a stylish and contemporary design to suit modern interiors and will fit seamlessly into its surroundings. It is efficient for daily use, it goes into sleep mode when not in use in order to preserve battery life. Users can monitor events and battery status online, with alerts via email and SMS for added convenience and to ensure doors are always secure.

EH Series Magnetic Door Holder & Releasing Device from SDC

SDC EH Series magnetic door holders are designed to hold doors open and release the door by remote switch or fire life safety command center activation. Use with the SDC Auto EntryControl Low Energy Swing Door Operator and SDC 474U No Touch Wave-To-Exit Switch to create a hands-free access control solution to meet the need for public health and fire/life safety or ADA compliance. Never touch a door again.

Primary application includes holding and releasing of fire-rated doors that are required to provide a barrier for fire and smoke in an emergency or the convenience of door closure by remote control. The product comes in a choice of 25, 30, 35 or 40 lbs. holding force (determined by the unit's specified voltage). It also features reduced power supply requirements and energy cost (15mA, 20mA or 40mA); and high holding force, which reduces stock or need to special order high holding force (determined by field selected voltage input and not available with 24/220v units). Models include:

- EH10 Flush Mount Magnetic Door Holder
- EH20 Semi-Flush Mount Magnetic Door Holder
- EH30 Surface Mount Magnetic Door Holder
- EH40 Floor Single Mount Magnetic Door Holder
- EH42 Floor Double Mount Magnetic Door Holder

For more information, call 1-800-413-8783 or visit the links below.

Securitron AQL Series Intelligent Power Supplies

Securitron AQL Series Intelligent Power Supplies offer a variety of relays and distribution boards in three, four, six and 10 Amp configurations. This power system is network management ready and available in 12 or 24 VDC single, dual and multi-voltage (5-18 VDC) units. The Netlink™ Network Module allows you to remotely manage, control and test the power supply and batteries on an automated schedule or instantly with just one click. Live system alerts communicated via text and/or email let you know the health and status of the power supply. B100 Secondary Voltage Module easily adds an additional voltage to any Securitron AQL system in a single enclosure. Provides the odd voltage (5-18 VDC) required to power modems, routers and other IT or similar devices.

SELECT Hinges Shim Stock

Doors stay square and gap-free for years when you use SELECT shim stock with geared continuous hinges to reduce the clearance between the door and frame – or, with full and half surface hinges to provide additional inset. It will keep your doors from sticking or binding for years. Choose from two materials: Translucent UHMW shim stock blends in with door and frame; comes with adhesive backing for fast-and-easy installations and removal; and is available in 100" rolls. Alternatively, choose the 95" clear anodized aluminum strips without holes. To add shim stock or other SELECT installation problem-solvers to your toolbox, contact your SELECT distributor or visit the links below.

Altronix LINQ8ACM Dual-Voltage Access Power Controller

Altronix's LINQ8ACM Dual-Voltage Access Power Controller with LINQ™ Network Power Management facilitates myriad locking devices, including magnetic locks and electric strikes, while providing network monitoring, reporting and control of eight independently controlled fuse or PTC protected outputs. For on-site verification, LINQ8ACM features bi-color LEDs indicating 12/24VDC on each output. Additional features include: emergency input trigger enabling egress and alarm monitoring; a disconnect feature individually selectable for each output; and spade connectors to daisy-chain multiple modules for larger systems. When combined with the Altronix VR6 Voltage Regulator, LINQ8ACM provides the ability to select different voltages for multiple outputs from a single power source. This reduces costs for multiple power supplies and batteries, while conserving valuable enclosure space due to its unique stackable design.

DoorKing 6006 Swing Gate Actuator

The DoorKing model 6006 is a versatile swing gate operator system that can operate gates up to 1600 lbs., or up to 18 feet in length – making it ideal for both residential and light-duty commercial applications.

The actuator can be left- or right-hand mounted and can be set for pull-to-open or push-to-open operation. The 6006 actuator operates on 24 Volt DC power and features built-in limit switches that precisely control the start/stop speed and travel of the gate.

The microprocessor-based electronic control board provides many advanced features typically not found in operators in this class. The control box can be powered by 120 Volt AC, which is then converted to 24 Volt DC to power the actuator and control board. Two 120 Volt control boxes are available to choose from, Deluxe and Standard. The Deluxe control box includes three 120 VAC outlets to power accessory transformers.

Both include 3.5 Ah (Amp Hour) batteries for back-up power operation. You can also select our Solar Powered control box, which eliminates the need for high voltage power runs.

The 6006 is American made – designed and built at DoorKing's manufacturing facilities in Inglewood, Calif.

Trine's 4850ITL Electric Strike Installation Tool

Trine Access Technology has developed the ultimate tool for installing electric strikes used with rim panic devices. As with all Axion strikes from Trine, this tool was designed to install the entire 4800 series line of strikes quickly and accurately the first time making the best installation available today.

The 4850ITL is not just a template, it is made from actual production parts giving the installer the ability to adjust for common door issues such as sagging and misalignment. By placing the ITL on the frame, it allows the installer to "feel" the strike working with the door and panic device allowing for fine adjustments before holes are drilled.

The flexibility and therefore accuracy of the 4850-ITL is derived from our patent pending magnetic holding system built into the body of the tool.

Combine this with a custom center punch that is included with every 4850-ITL used to make perfectly centered marks on the frame, this tool is a must for every installer of electric strikes.

See the video by searching "4850ITL" on Youtube!

Retrofit Exit Devices with SDC

SDC's Quiet DUO™ LR 100 Electric Latch Retraction Kit enables electric access control and dogging of mechanical exit devices. When energized, the motor retracts the exit device latch and pulls the pushpad on most devices into the dogged (depressed) position, enabling momentary or sustained push and pull operation of the door.

It retrofits most major brands of mechanical exit devices, including: Adams Rite, Arrow, Best, Cal-Royal, Corbin Russwin, Design Hardware, Detex, Dorma, Dor-O-Matic, Falcon, Hager, IDC, K2, Jackson, Marks, Marshall Best, PDQ, PHI, Precision, Sargent, Schlage, SDC, Tell, Town Steel, Von Duprin and Yale. Retrofit exit devices with our proven concealed solution.

- Motorized Electric Latch Retraction & Dogging for Fire Rated & Non-Fire Rated Devices
- Retrofits select exit device brands without removing device from door
- Only Latch head cover and end cover plate removable required for most other brands
- Low 700mA Inrush, 200 mA Continuous @ 24VDC
- Quiet Mechanical and Electric Operation
- Eliminates need for costly replacement of existing exit device
- Significantly less labor and costs compared to competitive retrofit kits
- Eliminates need for costly power supplies with high inrush circuitry
- Compatible with UL Listed Access Control Power Supply
- Only 1 Amp SDC brand power supply required for up to 2 exit devices
- Low current enables longer wire runs with smaller gauge wire
- No door sequencers required for pairs of manual doors

For more information, call 1-800-413-8783 or visit the links below.

S4000E Low-Profile Electrified Exit Device from SDC

SDC's S4000E is a low-profile, high value electrified exit device with stainless steel construction at a Grade 2 price with Grade 1 durability.

Not all exterior doors have adequate overhang protection for competitive painted steel exit devices brands, exposing them to weather and rust. The S4000E never rusts and comes with motorized electric latch retraction, making its application as easy as install - power - done.

It will be available in the third quarter of 2020.

- Stainless Steel Construction - Never Rusts
- Grade 2 Pricing with Grade 1 Durability
- Pre-Installed Electric Latch Retraction - Ready to Go
- Compact Design for Commercial & Industrial Applications
- Rim and Surface Vertical Rods
- REX and Trim Options Available

For more information, call 1-800-413-8783 or visit the links below.

Versatile BEST Door Closer Offers Premium Door Control Solutions

Door closers are the mainstay of a safe door. They protect people from doors swinging open too quickly or slamming shut. The new BEST series door closers include a portfolio of advanced door control solutions designed for a variety of applications.

The Grade 1 door closers utilize DIN226 and R14 corrosion-resistant aluminium to provide maximum protection against metal fatigue and abrasion. BEST door closers are compatible with 30 assorted specialty function arms, a variety of mounting plates and brackets and a wide range of painted or decorative architectural finishes.

BEST closers provide maximum protection against fatigue and abrasion. Built to meet the requirements of ANSI A156.4, comply with barrier-free requirements, these closers can be used with a wide-array of aluminum, wood, or hollow metal doors and frames.

The BEST Door Closers are ideal for high-use institutional settings where ADA compliance, safety, sanitation, and energy efficiency are top-of-mind.

SureClose CONCEALFIT Door Closer & Hinge Sets from D&D Technologies

SureClose CONCEALFIT Door Closer & Hinge Sets from D&D Technologies are high-quality, hydraulic units aimed at providing a concealed finish and a highly adjustable self-closing solution. They are ideal for interior and exterior wood, hollow-metal and aluminum doors and frames. When closed, the system cannot be seen or tampered with. They also provide burglary and vandalism resistance. Superb engineering and patented design allow total concealment of the hinge-closer unit in a remarkably small housing. The Hinge-Closer is easily adjustable in three dimensions (horizontal, vertical and in/out) for fine positioning and speedy door and gate alignment. It features fine controls for primary closing speed, latching speed and backcheck, plus UL10C fire-rating and has been tested to ADA and ANSI/BHMI Standards.

TEC1A Entry Phones from Select Entry Systems

The new TEC1A series from Select Entry Systems is VoIP/cellular ready, has 1,000-user capacity, and its ultra-slim profile is a mere two inches in depth, which makes for an exceptionally low profile surface-mount install.

The TEC1A series is available with two-line or four-line LCD directory display that is easily readable in direct sunlight or at night. Additional key features include: two relays standard; four cards per code; 10 system facility codes; and a 1,500-event log buffer. Users can program the product using Selcom Premium with full software features, or via Selcom Basic through several communication methods including Ethernet via NIC, a phone line or from the keypad of the unit.

Refining Select Entry System's construction design, the new TEC1A has an upgraded board design which allows for easier installation. It includes two base models (T1A2L - two-line line display and T1A4L - four-line display), and three product models - PREMIUM (includes with clock calendar, modem, MUI, serial port, NIC and 2 reader board), DELUXE (includes clock calendar, modem, MUI and Serial port), and BASIC (includes clock calendar). Several options are available which could be added to a BASIC or DELUXE model for added features after purchase/install without having to change the core product.

These products are available for immediate delivery.

Viking Panic Buttons Protect Your Assets

Viking's Emergency Phone Panic Buttons are designed to mount discretely under a desk or countertop to provide a quick and reliable way to make a silent emergency call. The called party can silently monitor the situation or engage in two-way handsfree communication by entering a touch tone "#". The Panic Buttons dial up to five emergency numbers, and all programming parameters are stored in non-volatile memory. Model PB-3 connects to any standard analog telephone line, analog phone system station or FXS port.

Model PB-3-IP functions as a SIP endpoint connecting from a PoE switch and can be programmed from any PC on the same LAN or remotely using a static IP address.

Aiphone IXG Series IP Multi-Tenant Video Intercom

Dealers and integrators can now offer property owners a single, powerful system that combines the feature-rich benefits of an IP intercom with the versatility of a multi-tenant solution. Aiphone's newest product - the IXG Series IP Multi-Tenant Video Intercom - will help solve security communication challenges beyond any other intercom. Complete with PoE stations and a cloud-based tenant app, it is easy to start small and expand at any time. With up to 9,999 stations in one system, going full enterprise-level from the get-go is now easier to achieve. As a network-based solution, the IXG Series is a sophisticated (yet simple) way to connect mixed-use buildings throughout an entire complex. Ask an Aiphone expert for a FREE virtual or in-person demonstration.

Clarity Voice/Tone Siren from American Signal

American Signal Corp.'s Clarity electronic siren is a high powered, fully configurable voice and tone siren that can be customized with a variety of notifications. As its name suggests, it provides exceptionally clear directions and alerts to individuals. Its compact size - less than 23 inches wide and less than 30 pounds - means the product can be shipped easily using standard shipping methods (instead of by semi-trailer), while enabling it to be mounted and installed easily, without the need for heavy equipment. The siren is ideal for university and college campuses and can be integrated with other technology, like the ASC Aware desktop notification system and the ASC Sentinel mobile device alerts.

C1M1 Dual-Path Alarm Communicators from ELK Products

C1M1 Communicators from ELK Products significantly reduce transmission time of emergency messages. Dial capture, data bus decoding, and cloud servers are not required, eliminating delays in communications. C1M1 provides super-fast, full data reporting to Central Monitoring Stations over IP and cellular pathways and automatically directs transmissions over the best pathway. C1M1 provides remote access with no port forwarding or extra fees. Installers can remotely program M1 controls over IP or cellular. Consumers can control the M1 remotely via the free ElkLink mobile app and web portal, as well as eKeypad and M1 Touch Pro apps. C1M1 provides email/text notifications for arm, disarm, and alarm events. It also supports ELK's IP based software and interface partners. C1M1 Communicators come in two versions, supporting either AT&T or Verizon networks.

M1 Security & Automation Controls from ELK Products

Are you searching for a new security control? It is time to discover M1 Controls from ELK. M1 is a rock-solid security & life safety system with comprehensive detection capabilities and flexible reporting options via telephone, IP, and/or cellular pathways. Programming M1 is easy! English text menus guide installers through keypad programming, eliminating the need to learn complicated programming codes. The ElkRP2 software makes it even easier with multiple-choice dropdowns, checkboxes, and text fields. M1 combines security with smart automation and flexible integration for intelligent scheduling and control of lights, thermostats, locks, water valves, and more. Superior encryption and multi-level authentication ensure secure remote connectivity so users can safely control the M1 from popular smart devices.

Telguard TG-7 LTE

The Telguard model TG-7 LTE provides backup cellular alarm communication solutions for commercial, retail and financial system markets. Alarm signals are transmitted over the AT&T or Verizon LTE networks when the telephone line or data network has been disrupted or compromised. This ensures critical data will reach the designated monitoring station. The products use advanced encryption technology for secure communications, and superior in-building penetration is achieved through maximum dual-band transmitting power. Other features and benefits include: Full data reporting; security supervision with automatic self-test and system trouble outputs; supports for multiple alarm formats; easy online activation; and it is UL listed for standard line security service.

Round and Rectangular Sirens/Strobes from STI

Safety Technology International (STI)'s line of round and rectangular siren/strobes complement its existing Select-Alert mini controller series. The siren/strobes can be used with cabinets, mounted above doors, to the wall, or the ceiling as a highly effective way to alert to unauthorized use, theft or vandalism, as well as unwarranted exits and entries. The combination of alarm and bright flashing LEDs offer excellent protection for a variety of urgent situations, by helping to draw immediate attention to the area. Round model (STI-SA5500) has a choice of eight strobe flash patterns with speed selection, and includes a backup battery feature. The rectangle model (STI-SA5600) has a tamper-proof lens option. Both models have a 12-24 VDC power supply.

Alula BAT-Connect Communicator

Beyond solving the looming problem of the CDMA network sunset, the intuitive BAT-Connect device from Alula smartly bridges intrusion security, video and automation with the Alula iOS or Android App to give security professionals a path to instantly modernize their customers' experience. Powered by the encrypted Alula network, system control is delivered instantly to the smart devices that customers already use. Upgrading aging security systems will enable dealers to increase recurring monthly revenue and retain more accounts. Because BAT-Connect uses IP as its first form of communication with cell as an optional backup, it does not have the same vulnerability to sunsets as cell-only communicators. It auto-links to Honeywell Vista and DSC PowerSeries, as well as Interlogix, Simon and Napco panels.

Wireless Infrared Break Beam Kit from Dakota Alert

The BBA-4000 from Dakota Alert is a solar-powered infrared break beam system that is simple to install and requires no wiring. The break beam sensors are powered by lithium ion batteries that are recharged through solar panels during the day. Because the unit is self-powered, there is no need to run wires for power. Installation time can be as little as a few minutes. The infrared sensing terminals can be mounted up to 300 feet apart and will send a signal back to a DCR-4000 receiver up to a mile away any time someone or something passes between the sensors. The point-to-point sensor will not be activated by any motion outside of the monitored beam, such as falling leaves or birds.

2GIG Smoke Heat Freeze Detectors

Enhancing safety and peace-of-mind for homeowners, Nortek Security & Control has introduced two new 2GIG Smoke Heat Freeze Detectors designed to detect fire issues earlier and recognize smoke from common synthetic materials to decrease nuisance alarms from everyday cooking. While traditional smoke detectors identify smoke and trigger an alarm when the smoke density has reached a specific level, these detectors use advanced algorithms and a sophisticated optical chamber to recognize the difference between smoke particles created by synthetic materials and those resulting from normal cooking events; thus, the alarm is triggered faster if smoke from common synthetics is detected – important because synthetic materials tend to burn faster. They meet the new UL217 8th Edition standard.

Fire Signaling and Alarm Speakers from AtlasIED

AtlasIED's TUC line includes four new UL 1480 certified speakers that can be used in code-required fire alarm systems (NFPA 72) for fire alarm signaling. Two environment-resistant, surface-mounted speakers (SM82TUC-WH and SM82TUC-B) can be configured for 70- or 100-volt installation and distributed sound applications. Two in-ceiling coaxial speakers, the 6.5" FAP-63TUC-W (pictured) and the 4.5" FAP43-TUC-W, feature an improved waveguide design for wider coverage than previous models and a patent-pending Safety-First Mounting System (SFMS), which prevents mounting tab damage during installation.

Hikvision Performance Series Thermal Cameras

Hikvision has launched its Performance Series Thermal Cameras – taking thermal imaging from niche to mainstream.

Designed for short-range detection, these cameras are best suited and priced for residential, commercial and industrial areas. The thermal-optical turret camera (model DS-2TD 1217-2/V1) combines wide-angle thermal and optical cameras with thermal imaging-based fire detection, temperature monitoring, cigarette smoking detection, DeepinView intrusion detection and abnormal sound detection.

The 160x120 vanadium oxide thermal detector provides Hikvision's outstanding thermal image quality upscaled to an output resolution of 320x240 with a downscaled cost. This camera is more advanced and half the price of Hikvision's previous low-cost model.

Arcules-Milestone XProtect Hybrid VMS Solution

Arcules and Milestone Systems have partnered to create a hybrid VMS solution that combines Arcules Video Surveillance as a Service (VSaaS) with Milestone XProtect Corporate on-premise video management software (VMS). The result is a flexible and feature-rich hybrid video surveillance solution ideal for organizations looking to centralize their dispersed video surveillance operations. The solution enables users to deploy remote sites quickly, with minimal IT resources and downtime, while giving sites and cameras connected to VSaaS an underlying cloud infrastructure – such as compatibility between sites, low video latency, data encryption, redundancy, streamlined maintenance with automatic updates, and easy onboarding.

FLIR Saros DM Series

The FLIR Saros DM-Series introduces eight new VGA and QVGA resolution options to the FLIR multi-sensor security lineup. Capable of capturing video in complete darkness, bright sunlight, and through smoke, dust or light fog, the DM-Series provides superior perimeter protection in the toughest lighting and environmental conditions. A built-in 4K visible light camera operates alongside the thermal sensor to capture minute details in low-light conditions. The DM-Series also integrates with the FLIR United Video Management System (UVMS), as well as other ONVIF-compliant video management systems. This gives users complete control over the all new dual-sensor viewing mode, alarm functions and fully programmable preset tour.

Recordable Voice Modules from ELK Products

Add value to video surveillance installs with custom voice alerts. Activating custom voice messages using video-based triggers allows installers to tailor video surveillance solutions, adding value for customers and increasing revenue. Easily add custom messages with ELK's recordable voice modules. Record messages using the built-in microphone or optional sound card interface. These units feature a 24-watt amplifier with adjustable volume for speakers. A line level output allows connection to paging systems or amplifiers. ELK offers two recordable voice modules: the ELK-120 with four channels and the ELK-124 with eight channels.

Uniview LightHunter Series Cameras

Uniview has enhanced its starlight series cameras with a line of cameras incorporating LightHunter, an innovative technology that delivers vivid color, appropriate brightness, and extremely clear images in ultra-low light. Cameras available include vandal-resistant dome cameras, WDR bullet cameras and PTZ domes. LightHunter solves the problem of cameras switching to black-and-white on low-light high resolution environments. Also included is Uniview's patented new-generation algorithm (U-ISP) noise reduction technology to improve Signal-to-Noise Ratio and reduce blur to increase sharpness. It effectively reduces blur for moving objects, which ensures that the image is restored to the true scene. LightHunter series cameras include commercial and project level cameras.

Panasonic i-PRO AI Camera Series

Panasonic's New i-PRO AI Camera Series capitalizes on new developments in AI to deliver higher levels of intelligence at the edge. The new series features nine new indoor and outdoor cameras complemented by two software modules, and is capable of running advanced analytics at the edge, which optimizes system bandwidth and storage requirements. Features include: Intrusion detection capable of recognizing and differentiating between humans and types of vehicles; privacy masking to ensure personal privacy and ID protection; and more. A Software Development Kit (SDK) is also available to enable third-party software compatibility.

IDIS Edge VA Bullet and Dome Cameras

IDIS Edge VA bullet and dome cameras feature on-board analytics that enable users to access and search large volumes of video data using the cost- and license-free IDIS Center VMS. The new domes include full HD IR domes (DC-D6233RX), full HD flush IR domes (DC-D6233FRX), full HD vandal-resistant IR domes (DC-D6233HRX and DC-6243HRX), and the LightMaster full HD IR dome (DC-D6233HRXL). The full-HD bullet cameras include models with built-in heaters (DC-T6233HRX and DC6243HRX), IR tech and a PIR sensor (DC-T6234HRX).

Residential Video Doorbell, Floodlight and Mini Cameras from Dahua

Dahua Technology USA's LincX2PRO Line includes a Wi-Fi-enabled video doorbell (DHI-DB11), mini camera (IPC-C26EN) and floodlight camera (IPC-L26N) that are fully compatible with its NVRs and penta-brid recorders, allowing users to easily integrate and upgrade their existing systems with smart home technology that has local storage and no subscription fee. Ideal for residential and small business installations, all three cameras integrate with Amazon Alexa for even greater ease of use. The mini camera offers 1080p resolution, customizable dual LED lights, and two-way audio. Its Passive Infrared (PIR) and motion detector identifies moving objects and can detect and filter out false alarms. The video doorbell also provides 1080p resolution, PIR and two-way audio. The floodlight camera incorporates 1080p video and H.265 technology.

Bosch MIC IP ultra 7100i Cameras

Bosch MIC IP ultra 7100i Cameras are supremely rugged, constructed from anti-corrosive metal, and can function at -40°C to +65°C. Even the built-in Intelligent Video Analytics technology is tough enough to provide maximum situational awareness in the most demanding environments. With machine learning capabilities to train the camera, MIC IP cameras can recognize user-specific target objects, such as moving and non-moving objects, to alert operators of unusual scene activity. The 4K UHD versions also provide extreme high-resolution for mission critical applications, such as city surveillance and congested highways. This makes them ideal for monitoring highways, bridges, tunnels, ports, airport perimeters and more.

i300 1TB microSD Card from Micron

The Micron i300 1TB microSDXC UHS-I is a high-capacity industrial microSD card to address the edge storage needs of the video surveillance market and other industrial applications. The microSD card is based on advanced 96-layer 3D quad-level cell (QLC) NAND technology, enabling users of video surveillance systems to capture and store more than three months of high-quality video footage on-device and at the edge. As demand surges for smart cameras, artificial intelligence, machine learning and threat detection at the edge, the ability to store large video footage files in the camera reduces the demand for network bandwidth and expenditure associated with continuous cloud storage.

180-Degree Panoramic Camera from Vivotek

Vivotek's MS9321-EHV 20MP 180-degree panoramic network camera with VAST 2 technology features four 5MP CMOS sensors at 30fps at all resolutions to monitor full 180-degree horizontal views. Ideal for outdoor surveillance, the camera includes a Video Alignment feature that enables the adjustment of the positioning and image quality of each sensor to create a seamless image with no repetition. Features include: Trend Micro IoT Security; a weather-proof IP66-rated and vandal-proof IK10-rated housing; integrated Smart IR II technology with adaptive IR that reduces glaring hot-spots and/or underexposed dark spots; WDR Pro (120dB). The camera also combines both H.265 and Vivotek Smart Stream III to reduce bandwidth and storage consumption.

Multi-Directional Cameras from Hanwha Techwin

Hanwha Techwin America's latest multi-sensor cameras feature motorized varifocal lenses for precise control of focal length, angle of view and zoom for each direction. Each sensor supports remote PTRZ (pan, tilt, rotate, zoom) control for efficient installation and easy adjustment. The 2MP PNM-9084RVQZ and 5MP PNM-9085RVQZ feature built-in IR illumination for each sensor while the PNM-9084VQZ is a compact and cost efficient four-channel PTRZ camera. The multi-sensor cameras use less cable, conduit and mounting hardware and require fewer ports on the switch and VMS licenses due to their single IP connection. Unlike fisheye lenses, multi-sensor cameras have more pixels focused in each direction with a broad range of customizable angles and zoom settings per lens.

No-Frame-Dropped (NFD) Storage System from Rasilient

PS390e is Rasilient System's third-generation No-Frame-Dropped (NFD) storage system purpose-built for video surveillance and AI applications. It offers up to 1.44 PB of fully redundant storage in a single 4U chassis. When used with the PS5012 head-end storage unit, the system offers up to 1.63 PB of unified storage for simultaneous reading and writing of video and meta data. Available RAID options are 5, 6, 10, 50 and 60. The system utilizes Rasilient's patented NFD technologies to make sure there are no video recording gaps while supporting thousands of cameras at a total bandwidth of up to 48 Gbps.

Equip your toolbox with SELECT problem-solvers

Speed up installations with these new solutions.

Whether you're renovating high-traffic entryways or putting in new frames and doors, you want your job to go faster and easier. Now there are three ways to simplify installing SELECT geared continuous hinges:

HB375 DRILL BIT

No center punch needed. SELECT's .375-inch drill bit is designed specifically to speed up installation of our geared continuous hinges.

PIVOT HINGE HOLE COVERS

Instant improvement. Mask the unsightly holes left by previous pivot hinge preps with SELECT's self-adhesive covers. Block out insects, dirt and water, too.

SHIM STOCK

Make invisible adjustments. Square up doors and frames without ruining their appearance. SELECT's shim stock comes in clear anodized aluminum strips or 100-foot rolls of translucent UHMW.

Avigilon H5A Explosion-Protected Camera Line

Avigilon H5A Explosion-Protected cameras from Motorola Solutions are suitable for hazardous environments such as oil and gas, mining and industrial sites and come in three models – a 6MP Compact Bullet, 2MP Bullet and 2MP PTZ. The cameras feature video analytics that include enhanced object detection and tracking, along with support for Avigilon Appearance Search technology – an AI-powered search engine that can sort through hours of video to improve incident response times. The camera line also features new Unusual Activity Detection to provide site-wide intelligence with the ability to highlight abnormal activity such as the unusual location or the abnormal speed of a person's movement.

Body Worn Camera Solution from Axis Communications

The Axis body-worn camera solution features three main hardware components: the camera itself (AXIS W100 Body Worn Camera), a camera docking station (AXIS W700 Docking Station, 1-bay/AXIS W701 Docking Station, 8-bay) and system controller (AXIS W800 System Controller). The camera captures video

up to 1080p at 30fps and audio through dual microphones for noise suppression capabilities. Wide dynamic range technology is employed to guarantee image quality in even the most challenging light conditions, while Zipstream for body worn reduces the demands for storage. It was designed on an open system architecture, which will allow for integration with video management systems (VMS) and evidence management systems (EMS).

16-Channel Hybrid Video Recorder from LILIN

The DHD516A 16-channel hybrid NVR from LILIN enables customers to introduce IP cameras to surveillance systems as their needs and budget allow, while preserving an initial analog camera investment without sacrificing video storage capacity. The hybrid technology lets security professionals extend the life of existing analog standard resolution cameras while adding up to 16 high-definition IP cameras. Bridging the gap between analog CCTV and IP-based networked digital video, features include: 8TB HDD storage, P2P support, HDMI 4K video output, as well as simultaneous capture, search, playback and backup capabilities. AHD, CVI, TVI, standard analog and IP Network cameras can be recorded simultaneously at speeds of up to 480fpa (IP) and 400 fps (analog).

TRENDnet PoE+ Smart Surveillance Switches

TRENDnet's Gigabit PoE+ Smart Surveillance Switches are integrated with camera management functions which are easily accessible within the surveillance switch's user interface. The switch comes in two models, the 18-Port Gigabit PoE+ Smart Surveillance Switch (TPE-3018LS) and the 12-Port Gigabit PoE+ Smart Surveillance Switch (TPE-3012LS). Camera management functions available through the switch's GUI include modifying camera administrator access, performing camera firmware upgrades, e-map support, and changing IP addresses. PoE self-healing support includes both PoE device-recovery, and switch power scheduling. If the switch fails to respond, or if the network connection to a connected device is interrupted, it will auto-reboot or power cycle the affected PoE port and/or the entire switch.

24-Port Cloud-Managed Recorder from OpenEye

OpenEye's OE-MLX24 is a 24-port version of its popular ML-Series Cloud-Managed PoE plug-and-play recorder. With the highest PoE channel count available from the supplier, it provides users more flexibility to install a single system with room to expand the camera count of video security systems over time. An all-in-one IP recording solution, its compact 2U chassis is well-suited for installation in a variety of environments and includes hardware for rack mounting. With a built-in 16 or 24-port PoE switch, the recorder features dual NICs, relay/sensor connections, and a secure Linux operating system with the option to upgrade to Windows.

Platinum Tools Stub End Coax Cable Stripper

The new Stub End Coax Cable Stripper RG59/6 (p/n 15046C) from Platinum Tools is designed for retro coaxial install scenarios where using a standard coax cable stripper is difficult due to restricted terminating space, such as when the stub end of a coax cable is protruding on the inside of a wall outlet or MDU box. The Stub End Stripper rotates like a screwdriver in either direction and features built-in braid comb for combing braid back over jacket. It has a replaceable blade cassette with no adjustment required and is effective for stripping both RG59 and RG6 coax cable.

Tyco HD Encoder from Johnson Controls

The Tyco HD Encoder from Johnson Controls allows high definition (HD) and standard definition (SD) analog cameras to function within an evolving IP infrastructure. The product is supported by exacqVision, American Dynamics and VideoEdge. Available in one-and four-channel options, it enables users in networked environments to retain HD and SD cameras while adding IP cameras over time. The encoder hardware adapts analog video to be sent over

IP networks. The encoder is Power over Ethernet-enabled for minimal cabling by running power and data through the same CAT5/6 cable. The encoder also includes important features like HDMI out, H.264 compression for cameras up to 2MP, multi-streaming and support for AHD, CVI and TVI analog protocols.

ME6 Series IP Cameras from March Networks

March Networks has introduced its ME6 Series IP Cameras, a 6MP camera line powered by Artificial Intelligence (AI). Incorporating advanced system-on-chip (SoC) technology from Ambarella, the cameras use Deep Neural Network processing power to accurately distinguish between people and vehicles. This built-in intelligence is combined with next-generation security analytics for accurate, real-time analysis and detection of events. The cameras also incorporate Digital Overlap High Dynamic Range (DOL- HDR), the latest in HDR sensor technology for superior image quality in highly contrasted lighting conditions. Models include the ME6 IR Dome, an indoor/outdoor dome with a 3.6-11mm motorized lens with P-Iris, and the ME6 IR DuraBullet outdoor camera, featuring a 2.7-12mm varifocal lens with P-Iris and remote zoom and focus.

It takes a Viking to... DEFEND YOUR CASTLE.

Let's face it, part-time security isn't good enough. You need it **24/7**. Day in and day out. Year after year. You can't afford to mess around with wimpy security.

That's why our rugged entry system and access control gear has been **battle-tested** to withstand the harshest elements and toughest intruders.

Our innovative designs, tough-as-nails craftsmanship, expansive product line, and best in class customer support have secured Viking's role as a **leader** in the security and communication industry for over 50 years.

YOU NEED A VIKING.

SECURE YOUR BUILDING FROM INTRUDERS.
