Maximum Security Turnstile (MST-TE) from Alvarado

Alvarado now offers North America's most specified and used maximum security turnstile in a 100% touch-free, motorized version. After presenting a valid entry credential, the turnstile unlocks, and an overhead sensor detects the user as they enter. Rotation begins automatically, eliminating the need for the user to touch and push their way through the turnstile.

Upon exit, the rotation cycle completes and relocks, ready for the next user. The result is a smooth and secure, completely contactless entry and exit passage.

The touch-free MST-TE is used for hygienic, high-security entry control in corporate, industrial, critical infrastructure, government, and military installations. Applications include employee and visitor touch-free access control, perimeter and fence line security, unattended entry points, time-and-attendance integration, and one way exit control.

Touch-free field kits are also available, allowing facilities to easily add touch-free functionality to installed/existing Alvarado full height turnstiles.

For more info on the MST-TE and other touch-free solutions from Alvarado, contact sales@alvaradomfg.com or visit the links below.

HID Signo Access Control Readers

The future of access control is here. Meet Signo, the signature line of access control readers by HID Global. HID Signo™ readers offer cutting-edge security technology within a sleek, upscale design.

Versatile – HID Signo readers are highly versatile, providing support for the widest range of credential technologies. This new line of readers is mobile ready with native support for BLE and NFC phones, wall switch or mullion form factors for readers and keypads, and enhanced contactless polling to support credentials in Apple Wallet. Easy to order and install, Signo delivers support for today's credentials along with the ability to upgrade effortlessly.

Secure – Get best-in-class security and unparalleled efficiency with HID Signo with ultra-secure cryptographic keys on certified secure element hardware. Reliable in even adverse conditions with an IP65 outdoor rating and providing protection against brute force attacks, Signo provides optimized performance and read range for powerful access control and a superior user experience and the ability to reduce energy consumption with Intelligent Power Mode (IPM).

Connected – HID Signo readers feature market-leading hardware and are connected to the future out-of-the-box. Signo offers new capabilities through firmware upgrades. With OSDP support for secure bidirectional communication, Signo is designed to be connected and managed remotely. Easily migrate and access the choice and flexibility that comes along with the widest global network of channel partners.

Gunshot Detection by SDS: Automate the Alarm for Active Shooters

The Guardian Indoor Active Shooter Detection System from SDS incorporates the world's finest acoustic gunshot identification software and combines it with infrared gunfire flash detection to produce the highest performing, fully automatic, and most accurate gunshot detection technology available.

Guardian simultaneously detects gunfire and immediately relays this information via a floor plan map with shot location while simultaneously sending shot location information via text, email, and other notification pathways to those in harm's way. It is the only DHS SAFETY Act-certified Gunshot Detection System.

Sensor Features: Proven acoustic and infrared detection technology filters out false alerts; immediate detection and reporting; low caliber (.22) to high power weapons detection; Built-in-Self-Test (BIST) of internal acoustic and infrared sources; continuous heartbeat messages; patented handheld testing device.

Additional Wireless Features: Proprietary lithium battery pack; long range wireless capability; Aub-1GHz comms channel; AES encryption.

Guardian sensors and software are continuously updated with security and communications features. Guardian consistently passes rigorous information security and penetration testing by Fortune 100 and FedGov customers and is performance-certified at the highest levels by U.S., U.K. and Australian authorities on anti-terrorism technologies. SDS is now a part of the Alarm.com family. Call 1-844-SHOT911 or visit the links below for more details.

Theia Telephotos for High Detail: Compact was Never so Powerful!

Theia's SL940 9-40mm and SL1250 12-50mm telephoto lenses provide high performance at up to 5 megapixel and 4k resolution respectively for up to ½.3" and 1/1.7" sensors. These telephoto varifocal lenses allow the user to optimize the field of view to zoom in on an area of interest far away with 4X zoom capability and then digitally zoom in up to 16X while still maintaining better than SD image resolution.

Theia telephoto lenses are excellently IR-corrected to work with true Day/Night cameras, maintaining crisp resolution in near IR light. At only 50mm or 52mm long and 54mm in diameter, the lenses are very compact for telephotos, facilitating fit in some 4" domes, bullets, and tight spaces.

The combination of high resolution performance, excellent IR correction, and compact size make them ideal for high detail applications such as License Plate Recognition and traffic monitoring.

The lenses are available in DC Autoiris, P-iris, and Manual iris versions in CS mount. Also offered in fully motorized versions with board mount and NIR bandpass and notch filters available on some models.

For more information, visit the link below, or email info@theiatech.com for pricing and availability.

Sargent SN Series Electronic Access Control Locks

SARGENT's new SN Series Integrated Wired locks brings the best combination of security and versatility to its Integrated Wired product line.

Featuring HID Global's Secure Identity Object (SIO™) digital credential technology to provide advanced security and performance and HID® Signo Reader Technology to support multiple credential types, the SN200/210 Series is ideal for mixed credential environments and enables easy migration to higher security credentials and mobile access.

Available with either a keypad or non-keypad reader, the SN Series offers the convenience of using a card, PIN, or card plus PIN credential, supporting dual factor authentication requirements.

The SARGENT Integrated Wired product line offers industry-standard Open Supervised Device Protocol (OSDP) communication for secure channel, serial communication between the reader and Physical Access Control System (PACS).

SafeTrust SABRE Module

The SABRE Module is a low-cost, 30-second upgrade that brings fast touchless mobile credentials, supplier-neutral MIFARE, DESFire, Wi-Fi, and OSDP features to HID iCLASS SE and multiCLASS SE readers.

With a simple plug-in installation that requires no re-wiring, the SABRE Module delivers enterprise-grade security with leading touchless mobile access technology and support for MIFARE DESFire EV2 and EV3 credentials from any credential supplier. The SABRE Module also upgrades the host reader into a full IoT connected sensor, providing active scanning of BLE-enabled devices, with additional support for Thread and Zigbee.

100% Plug and Play: 30-second plug-in upgrade with zero downtime

Support for Touchless Mobile Access: Transform doors, elevators, parking garages, and more for seamless access using Safetrust mobile credentials, eliminating community touch-points and creating a safer workplace.

Support for DESFire EV3 Security: Migrate from prox and iCLASS credentials to DESFire EV3. Purchase secure credentials from any card vendor, lower your credential cost and open up form factors not supported by HID.

Support for Contact Tracing: Obtain proximity records for mobile devices in your workplace to find close contacts and potentially contain outbreaks before they escalate.

SDC S6000 Spectra Series Architectural Exit Devices

SDC's S6000 Spectra™ series panic and fire rated exit devices are available in rim mount, mortise, and surface vertical rod configurations.

Spectra Class mechanical exit devices are UL listed and ANSI A156.3 Grade 1 compliant and comply with all national and state building and fire life safety codes.

The SDC Spectra series exit devices have a modern look and quiet push pad operation and are available in rim mount, mortise and vertical rod configurations. The S6000 Spectra series also offers several electrified options to meet any application such as electric latch retraction, electric dogging, alarmed exit, delayed egress, electrified mortise and electric frame actuator controlled.

- Panic and Fire Exit Hardware
- ANSI/BHMA A156.3-2001 Grade 1 Compliant
- CA Title 19 Compliant
- Meets/Exceeds ADA requirements
- UBC 97, Standard 7.2

AirAccess Cellular Cloud-Based Access Control from Alarm Lock

New from Alarm Lock, AirAccess™ is a scalable, cellular cloud-based ecosystem that is easy to install and operate.

There is nothing extra to buy and no software to load or upgrade.

It can be used with the entire field-proven family of Alarm Lock Networx wireless locks, including Trilogy Networx® and Designer ArchiTech™ series. Or, use AirAccess with wireless NetPanel and standard IDs and readers.

Air Access uses proven, class-leading StarLink cellular technology, on either AT&T or Verizon LTE networks, for the broadest nationwide coverage.

AirAccess is virtually wire-free from the cloud to the door. Other features and benefits include:

- Easy to install and operate, cloud-based access locking systems, with easy-to-connect cellular communication
- No Connection to customer's IT system
- Generates incremental RMR for dealers
- Saves end-user accounts the need to devote resource to an on-premise access system

SDC EntryCheck E75 Privacy Lock

The SDC EntryCheck E75 Privacy is a low-cost, indoor/outdoor standalone electronic battery powered solution, providing controlled access for basic and multi-level high security requirements. It is perfect for new or retrofitting of fast food, service station or convenience store restroom facilities – it is battery powered (4 AA), so no wiring or power supplies required. It is also a cost-effective addition to educational or corporate campuses to provide a privacy function to board rooms, counseling rooms and meeting spaces.

Customers or employees can be provided an access code to enter on the keypad to access the room and simply push the inside red button when the door is closed to activate the privacy function. The red outside LED flashes to indicate room occupation. When turning the inside lever to leave, the privacy function is deactivated and the lock is ready again to accept another user.

Signage clearly indicates status and function, so no user instructions are required. An internal timer disengages the privacy function to make the room available for a new occupant, and an auxiliary relay signals management that the occupant has exceeded the time limit. Management can override the privacy function in case of emergency with a key or master code or to clear room occupants who have overstayed their welcome.

A prox reader version is also available. It is easy to install and retrofits to existing lock door prep. It is heavy duty ANSI Grade 1 and is weather and vandal resistant. For more information, call 1-800-413-8783 or visit the links below.

Medeco 4 (M4) Cylinders

Medeco builds on more than 50 years of lock engineering innovation and takes security to the next level, offering the highest level of protection against physical attack and unauthorized key duplication with Medeco 4 (M4).

M4 cylinders are UL 437 listed for physical strength and high security components, using solid brass construction with strategically placed hardened-steel inserts to thwart drilling attacks. In addition to tumbler pins that lift and rotate, M4's design includes 4 side pins: 3 finger pins and 1 lift pin, which must all interact with the sidebar to open, providing a high level of pick resistance. M4 cylinders also meet or exceed BHMA A156.30 criteria for strength and durability, key control, and surreptitious entry resistance.

The patent-pending M4 key design, with its shuttle pin movable element, also protects against 3D printing for unparalleled credential security. M4 keys also feature angled, offset cuts on the key blade and unique keyway pre-cuts. A special key cutting machine and access to Medeco-specific blanks are required to duplicate M4 keys, which are available in multiple levels of restriction to support every need. Secondary side-pin bittings provide expanded master keying capabilities.

The technology built into M4 - including the movable key element and side and lift pins in the cylinder – stretch the boundaries of features that can go into a lock and key system.

dormakaba ED100LE Swing Door Automatic Operator

The ED100LE from dormakaba is an elegant electromechanical swing door operator ideal for room access and assistance on demand for various fields of application. Tested to 1,000,000 cycles, this robust low energy operator is suitable for emergency escape routes as well as use on fire and smoke check doors.

The surface applied electromechanical swing door operator functions as a heavy-duty, single system for automatic (+/- 600lb doors) door opening. It employs an innovative, and super-quiet, electromechanical drive for quick, quiet, and painless transition from manual to touch-free access that is ideal for hospitals, schools and offices.

Key benefits include:

- Durable testing with 1 million cycles and counting, we only use 20% of the motor lift
- Advanced power assist makes using the door much easier
- Fully ADA compliant
- Available with push or pull arm
- A small footprint makes for easy installations
- Functions with a host of actuator peripheral devices

SDC S5000 Storefront Exit Device with Factory Installed Latch Retraction

SDC's S5000 is a heavy-duty, code-compliant alternative to magnetic locks for storefronts applications that require durability, superior aesthetics and smooth operation. This UL305 panic-rated exit device is American-made, featuring all-metal construction that is particularly suited to aluminum glass entrances for both manual and automated door openings and new or retrofit applications.

Not only does the SDC S5000 meet the market need for a Storefront Exit Device with Electric Latch Retraction standard, it also comes with optional Request-to-Exit monitoring for access control compatibility. The S5000 with factory installed motorized electric latch retraction makes application as easy as Install - Power - Done.

- Factory Installed Motorized Electric Latch Retraction
- Request-To-Exit (REX) Monitoring - optional
- Electric Dogging to Hold Latch Retracted
- Storefront Aesthetics & Smooth Operation
- Compatible with Low-Energy Door Operators
- UL305 Panic-Rated, Grade 1
- Latch Status Optional
- Rim & Concealed Vertical Rod Devices
- Aluminum Glass Door Applications
- American Made

Infinity Access Control Readers from Deister Electronic

The Infinity Line of Access Control Readers from Deister Electronic were designed for today's and tomorrow's dynamic and accelerating credential environment. This is an environment where reader obsolescence as a result of new, more secure credentials and interface technologies is a serious and expensive problem. Today's readers must be ready to work with new and presently unknown advances in security. Deister's Future Proof™ technology allows for firmware updates via either OSDP (when used with compatible Access Control systems) and/or Deister Utility software.

System interface capabilities include OSDP, Wiegand and Magstripe. Supported credentials are broad and increasing with selectable capabilities for DESFire® EV½, Mifare® Classic, HID Prox, HID iClass® (CSN or sector), proxLite®, AWID, PIV, CAC and many others.

Turn these technologies on or off with OSDP supported Access Controls systems or configuration cards or with Deister's standalone Utility software.

Encryption may be enabled for all supported credentials via OSDP and compatible Access Control systems; and the full range of encryption technologies is supported for selectable encryption for credentials such as EV2.

Infinity readers are available in single gang and mullion formats; with and without keypad; and in either white or black.

dormakaba 910TC Touchless Switch

The 910TC touchless switch is a unique low-profile touchless actuator plate utilizing capacitive technology for the activation of automatic doors. The 910TC allows hands-free door opening applications to help reduce the spread of germs and bacteria making it an ideal solution for healthcare facilities, restaurants, schools, offices, and restrooms.

Key features and benefits include:

- Easy to install
- Functions with many automatic door openers
- Adjustable detection zone to reduce unwanted activations
- Indicator light changes color when device is activated
- Available with optional remote fob and receiver
- Aesthetically pleasing design
- Option to disable audible indicator
- Secondary Normally Open (NO) mechanical switch in the event of a power loss
- Selectable unlock times (1-63 seconds)
- Available in narrow (mullion) or standard size
- Standard mounts to single-gang electrical box
- Available in kit options
- Also available with French language plates
- Option to toggle momentary to maintained
- Meets ADA compliance (check local building codes for compliance)
- FCC & ISED Certified

CLX3300 Series Cylindrical Lock from Corbin Russwin

Corbin Russwin's CLX3300 Series cylindrical lock is manufactured of the highest-quality materials to provide durability, strength, and reliability in the most demanding, high-traffic spaces.

The highly anticipated premium bored lock is certified to surpass ANSI/BHMA Grade 1 requirements in some of the most challenging environments and offers superior vandalism resistance. The CLX3300 Series withstands 3100 in-lbs of torque (2.6x requirement) while maintaining egress, prevents entry against 1,600 lbs. offset lever pull (8x requirement), prevents entry against 100 vertical impacts (20x requirement), and maintains latch retraction under 100 lb. preload (2x requirement), ensuring consistent operation in warped doors or doors with latch bind.

Available in 26 mechanical functions and 14 finishes, the CLX3300 Series supports all cylinder formats – from fixed to interchangeable core.

SDC app with DoorSnap

Door Control Retrofits Made Easy

Dealers, installers and integrators can use the DoorSnap function within the free SDCSecurity app on a smartphone to take a picture of a door opening and submit it to receive a cost-effective electrical access and egress solution recommendation from SDC, with product information links to retrofit the opening for access and egress control locking hardware.

The SDCSecurity app is available for iOS in the app store or for Android on Google Play.

For more details, call 1-800-413-8783 or visit the link below.

Detex Delayed Egress with Latch Retraction

Detex Corporation, an industry leader in life safety and security door hardware for commercial properties, is introducing an exclusive advancement in exit devices. Designed for applications such as law enforcement, airport, or health care facilities, where security is a high priority for protection of employees, visitors, patients and vendors, the patented Detex Delayed Egress with Latch Retraction device integrates both functions for more efficient operation.

The staff finds the practical Delayed Egress with Latch Retraction design well-suited to department routines – for example, controlling access to surgical suites from holding areas, or restricting entry to nursery areas or pharmacy facilities. They also appreciate the smooth pushpad, which doesn't snag on clothing or equipment.

The Delayed Egress with Latch Retraction device has no external magnets, electric strikes or electric trims. Everything is contained in the rim device, so there are fewer components to install, and fewer to malfunction and affect performance. Operation is simple: for authorized personnel, the latch retraction operates with the access control system, bypassing delayed egress to allow exit and entry without sounding the alarm. But unauthorized entry triggers a 100dB alarm and keeps the door locked for 15 seconds, allowing time for staff to respond. A fire alarm input provides life safety override for immediate exit during a fire emergency.

Detex is the first and only manufacturer with this combination of functions in one device.

Sargent 8200 Series Mortise Lock Status Indicator

SARGENT's occupancy/status indicator option for the 8200 Series mortise lock provides security and safety at a glance with more functionality than previous versions. With the largest viewing window in the industry, a 180° visibility profile, reflective indicator materials and more color and text/graphic combinations to offer, the status indicator option ensures that the status indicator is clearly visible from a distance, providing assurance when you need it most.

These indicators are available with both sectional and escutcheon trims and are used in a variety of applications to identify occupancy or display locked/unlocked status of a room.

Furthermore, upgrading to the latest mortise lock status indicators is quick and easy for facilities with existing 8200 Series mortise locks. Upgrade kits use the existing door preparation and hide all pre-existing holes.

SDC Hands Free Door Solution: Never Touch a Door Again

SDC's Hands Free Door Solution™ is a common-sense answer to help businesses, schools and organizations to re-open or stay open during the pandemic crisis and provide peace of mind. A wave of the hand in front of the 474 Touchless Switch activates the Auto EntryControl™ Low Energy Swing Door Operator for access or egress. Never touch a door again on the way in or out of a facility or room. View the video: http://solutions.sdcsecurity.com/sdcs-hands-free-door-solution-presentation.

- Meet the immediate need to fight the spread of infection
- Provides customer and employees safety
- Reduces potential for liability
- Safe, simple, sanitary
- Easy to install
- No need for a separate power supply
- Low Energy operation for sustainability
- Bathrooms, Entrances, Offices: Almost Any Door Shipping Now. Call 1-800-413-8783 or visit the links below.

Sargent 10X Line Bored Lock

SARGENT's 10X Line bored lock is manufactured of the highest-quality materials to provide durability, strength, and reliability in the most demanding, high-traffic spaces.

The highly anticipated premium bored lock is certified to surpass ANSI/BHMA Grade 1 requirements in some of the most challenging environments and offers superior vandalism resistance. The 10X Line withstands 3100 in-lbs of torque (2.6x requirement) while maintaining egress, prevents entry against 1,600 lbs. offset lever pull (8x requirement), prevents entry against 100 vertical impacts (20x requirement), and maintains latch retraction under 100 lb. preload (2x requirement), ensuring consistent operation in warped doors or doors with latch bind.

Available in 26 mechanical functions and 14 finishes, the 10X Line supports all cylinder formats – from fixed to interchangeable core.

SELECT Hinges Shim Stock

Doors stay square and gap-free for years when you use SELECT shim stock with geared continuous hinges to reduce the clearance between the door and frame – or, with full and half surface hinges to provide additional inset. It will keep your doors from sticking or binding for years. Choose from two materials: Translucent UHMW shim stock blends in with door and frame; comes with adhesive backing for fast-and-easy installations and removal; and is available in 100" rolls. Alternatively, choose the 95" clear anodized aluminum strips without holes. To add shim stock or other SELECT installation problem-solvers to your toolbox, contact your SELECT distributor or visit the links below.

No-Touch Stainless Steel Button from STI

Stay safe and germ-free with STI's new contactless stainless steel button. STI's double-gang NoTouch® Stainless Steel IR Switch helps eliminate the spread of viruses in hospitals, clinics, labs, cleanrooms, schools, department stores, factories, offices or any public building with high traffic areas. To exit/enter a building without touching the door, a user must simply wave their hand in front of the touchless button. The infrared will detect the motion and unlatch the time adjustable door. Constructed of medical/food grade 304 stainless steel, has a Form "C" dry contact, 0.5A @120VAC, 1A @24VDC. Integrated adjustable timer 0.5~20 seconds, 12-24 VDC, 45mA (maximum), dual color status LED (green/red or red/green), 1.5~6 inch detection range. Button available with operating instruction options: OPEN, EXIT or a door symbol.

Primis Access Control Readers from Identiv

Identiv's Primis Access Control readers get an organization's entry-level access control up and running in less than 10 minutes. The readers bring the latest technology to traditional access control systems by supporting both smart card and proximity-based access control credentials. The entry-level readers are designed to work in the government or commercial space and are ideal for schools, banks, apartment complexes, retail establishments, or any environment that uses multiple credential populations (i.e., proximity and smart card); needs to migrate from one credential technology to another; or requires support for single-site, multi-tenant access control systems. They come in three different finishes: matte black, gloss black, or matte white.

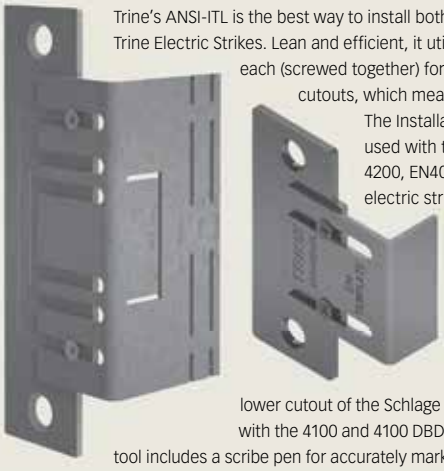
ACCESS CONTROL & DOOR HARDWARE

ANSI-ITL for the Best and Easiest Installation of Trine Electric Strikes



Trine's ANSI-ITL is the best way to install both 4-7/8" and 2-¾" Trine Electric Strikes. Lean and efficient, it utilizes only two pieces each (screwed together) for the 4-7/8" and 2-¾" cutouts, which means fewer lost parts. The Installation tool can be used with the 4100, 4100DBDL, 4200, EN400, EN435, EN430 electric strikes as well as 478, 478X, 234, and 234X installations on the 3000 series.

Adjustments on the installation tool allow for installation even on the lower cutout of the Schlage L series – for use with the 4100 and 4100 DBDL. Additionally, the tool includes a scribe pen for accurately marking the cut-out lines on the frame. Two mounting screws for the tool is also included.

Please note the ANSI-ITL replaces the older 478-ANSI-ITL model number.

The ANSI-ITL is fast, easy, and accurate. Ask your distributor how you can get yours today.

KEY CONTROL

Medeco Intelligent Key Cabinet

The Medeco Intelligent Key Cabinet is a complete, electronically-controlled, key management solution that can secure, distribute, and audit the use of Medeco XT intelligent keys, mechanical keys, or other assets. Only authorized users are able to access the electronic key management system. Customizable user access groups allow for tighter control of higher security keys. Biometric Fingerprint, PIN, and/or Prox Card authentication (optional) allow access for added security and control. The IKC supports dual authentication if desired. For added security, a digital photo capture of each login is available.

The IKC locks XT intelligent keys in place and keeps them charged and ready for use. The IKC helps remove worry as to who has keys because it offers a complete audit trail, as well as reporting that shows user and key activity. The comprehensive reporting and analytics help identify potential problems in access and return patterns before they escalate This means fewer lost keys, lower expenses, and improved security.

An easy-to-use, web-based software shows what keys are out, and to whom they are issued. The IKC also allows employees to retrieve keys quickly without having to wait for a manager.

The Medeco IKC is available in 32 and 64 port sizes, and includes a built-in LCD screen for ID.

By adding an optional Medeco XT IPD programming device, XT keys receive programming updates while charging.

Theia Telephotos for High Detail: Compact was Never so Powerful!

Theia's SL940 9-40mm and SL1250 12-50mm telephoto lenses provide high performance at up to 5 megapixel and 4k resolution respectively for up to ½.3" and 1/1.7" sensors. These telephoto varifocal lenses allow the user to optimize the field of view to zoom in on an area of interest far away with 4X zoom capability and then digitally zoom in up to 16X while still maintaining better than SD image resolution.

Theia telephoto lenses are excellently IR-corrected to work with true Day/Night cameras, maintaining crisp resolution in near IR light. At only 50mm or 52mm long and 54mm in diameter, the lenses are very compact for telephotos, facilitating fit in some 4" domes, bullets, and tight spaces.

The combination of high resolution performance, excellent IR correction, and compact size make them ideal for high detail applications such as License Plate Recognition and traffic monitoring.

The lenses are available in DC Autoiris, P-iris, and Manual iris versions in CS mount. Also offered in fully motorized versions with board mount and NIR bandpass and notch filters available on some models.

For more information, visit the link below, or email info@theiatech.com for pricing and availability.

Theia Technologies' Family of Ultra Wide No Distortion Lenses

Lenses made with Theia's patented Linear Optical Technology® are designed to cover wide areas without barrel or fisheye distortion. This innovative technology offers an ultra-wide field of view while using all optical distortion correction to remove barrel distortion without using software, avoiding the resolution compression common in fisheye style lenses and the latency inherent in software correction.

The technology provides increased resolution at the image edge compared to other wide-angle lens technologies, improving the ability to identify, quantify, and characterize objects. Wide angle lenses can reduce the number of cameras required to cover an area, reducing cost of installation, maintenance and monitoring.

The technology enables lenses with up to 135 degrees HFOV and 120 degrees VFOV with 5+ megapixel 200+lp/mm resolution and includes near IR corrected models with very low focus shift, maintaining high resolution for Day/Night cameras. The family of lenses includes 3 models, including 2 fixed focal length and one varifocal model for fine tuning field of view.

The lenses are available in manual or DC auto iris versions, in CS or C mount.

For more information, visit the link below, or email info@theiatech.com for pricing and availability.

Theia Technologies' Award-Winning 4K Lens Family

Theia's family of 4K lenses provides full 12 megapixel 300 lp/mm resolution performance for the most demanding applications such as ANPR/LPR, traffic monitoring and analytics.

Two lenses cover a horizontal field of view of 7 to 112 degrees, with the SL/TL410 lens providing a 4-10mm focal range, while the SL/TL1250 telephoto lens offers a 12-50mm focal range. Both have excellent IR correction with less than a 5µ focus shift in Near IR light for superior Day/Night performance. At *f*/1.4 the SL/TL410 lens offers excellent light gathering ability in low light conditions. The lenses are designed to cover the larger 1/1.7" 4K image sensors while at the same time resolving the smaller 1.55µ pixels of the ½.3" 4K sensors.

Measuring only 52mm long (64.5mm TTL) they are the most compact of comparable 1/1.7" format 4K lenses available on the market to facilitate use in domes, bullets, small enclosures, as well as on box cameras. Both lenses feature a slip ring mount that allows the user to position thumb screws for convenient access to focus and focal length adjustments post-installation on the camera.

The lenses are offered in manual, DC Auto, or Precise iris versions, and CS or C mount depending on the model.

For full specifications, drawings and CAD files, visit the link below, or email info@theiatech.com for pricing and availability.

M1 Security & Automation Controls from ELK Products

Are you searching for a new security control? It is time to discover M1 Controls from ELK. M1 is a rock-solid security and life safety system with comprehensive detection capabilities and flexible reporting options via telephone, IP, and/or cellular pathways. Programming M1 is easy! English text menus guide installers through keypad programming, eliminating the need to learn complicated programming codes. The ElkRP2 software makes it even easier with multiple-choice dropdowns, checkboxes, and text fields. M1 combines security with smart automation and flexible integration for intelligent scheduling and control of lights, thermostats, locks, water valves, and more. Superior encryption and multi-level authentication ensure secure remote connectivity so users can safely control the M1 from popular smart devices.

Speed up installations with these new solutions.

Whether you're renovating high-traffic entryways or putting in new frames and doors, you want your job to go faster and easier. Now there are three ways to simplify installing SELECT geared continuous hinges:

HB375 DRILL BIT

No center punch needed. SELECT's .375-inch drill bit is designed specifically to speed up installation of our geared continuous hinges.

PIVOT HINGE HOLE COVERS

Instant improvement. Mask the unsightly holes left by previous pivot hinge preps with SELECT's self-adhesive covers. Block out insects, dirt and water, too.

SHIM STOCK

Make invisible adjustments. Square up doors and frames without ruining their appearance. SELECT's shim stock comes in clear anodized aluminum strips or 100-foot rolls of translucent UHMW.

ELK Products 319.5 MHz Wireless Sensor Line Expanded

The ELK-319PIRW Wall Mounted Motion Sensor and ELK-319GB Glass Break Sensor are the latest additions to ELK's 319 Series wireless sensors. The ELK-319PIRW offers a detection range of up to 40 ft with selectable sensitivity, pet immunity up to 22 lbs., and a built-in tamper switch. The ELK-319GB offers a detection range up to 20 ft. with selectable sensitivity and a built-in tamper switch. Utilizing the 319.5 MHz operating frequency, ELK's full line of 319.5 MHz wireless sensors are compatible with many popular systems, including ELK's M1 Controls. ELK's 319.5 MHz sensors are also ideal for existing Interlogix systems in need of replacement sensors.

5G-Ready Fire Communicator from Telguard

The Telguard TG-7FP communicator operates on LTE-M networks and is 5G ready, which translates to a long-lived, future-ready installation. The economical solution powers directly from the alarm panel's 12V/24V auxiliary power source. It is a streamlined version of the TG-7FS workhorse in a compact plastic enclosure and features a sole path cellular communication pathway. The communicator is UL 864 listed for AT&T or Verizon, and ULC-S559 certified for AT&T. It is also compliant with 2019 and earlier editions of NFPA 72.

E2S Warning Signals Industrial Alarm Horn Sounders

E2S Warning Signals has introduced the next generation of its M range industrial alarm horn sounders. The new MA1F and the MA2F employ the enclosure and mounting as previous MA112 and MA121 versions but now feature enhanced electronics containing the latest in D Class amplifier technology, with lower in-rush current, wider voltage range, lower current consumption and improved alarm tone choice and control. The MA1F uses a standard directional flare horn; the MA1R features the innovative E2S '1R' omni-directional horn that is particularly suitable for applications requiring a compact device.

Fixed Panic Switch from Magnasphere Corp.

The MK-3045 fixed panic switch from Magnasphere Corp., is available with lead or terminal connections. The MK-3045L and MK-3045T are made with the company's magnetic switch technology to improve on this critical security and life safety device. The switch won't break and will not fuse from a lightning strike or a voltage spike, giving users confidence it will function when needed. In addition to traditional fixed panic switch applications, the MK-3045L can be used for cold room/refrigerator applications with a soldered and shrink-wrapped connection recommended.

CENTRAL STATION MONITORING EQUIPMENT

Alarm Center from Security Information Systems (SIS)

Alarm Center is a modular and scalable security software platform designed to be the central point in alarm and data management. It has set the standard for reliability and excellence for leading government and commercial organizations. It is UL and ULC Classified, has passed the stringent testing requirements of the Department of Defense Information Assurance Certification and Accreditation Process (DIACAP), and complies with Assured Compliance Assessment Solution (ACAS) and the Secure Configuration Compliance Validation Initiative (SCCVI). It provides required automated network vulnerability scanning, configuration assessment, application vulnerability scanning, device configuration assessment, and network discovery required for government installations. Alarm Center integrates with more than 100 third-party systems while continuously monitoring and automating responses to all alarm signals for fast and accurate event management.

Manitou Alarm Monitoring Software from Bold Group

Manitou is Bold Group's award-winning alarm monitoring automation software available on-premises or hosted through our UL-listed, secure Cloud platform. Manitou seamlessly integrates intrusion, ONVIF-compliant video, access control, lone-worker protection, GPS, and more into a single, web-based user interface. This modern UI is designed for operator simplicity, with features like enhanced action patterns and a data entry wizard to provide consistent processes and a faster response. With an accounting integration for SedonaOffice and Quickbooks, and an open API for flexibility, Manitou's ease of data analytics and robust reporting options range from standard to detailed and customized, so the metrics most necessary for your business can be measured. See why Manitou is a leading software choice for top security companies around the world.

Partitions for Social Distancing from Winsted

Social distancing of six feet can be very difficult for anyone working in control room environments. Winsted can provide an effective, easy-to-install partition that helps reduce exposure and the risk of exposing others within a control room or operations center. These partitions create an effective level of protection while defining personal workspace, which also reinforces social distancing. Designed to fit on many different work surfaces, the easy to clean acrylic panels are available with clear or frosted panels.

POWER SUPPLIES

Altronix eFlow Dual Voltage Access Control Kits

Altronix's enhanced line of eFlow power supply/charger kits provide 12 and 24VDC simultaneously for locking devices and peripherals. They are equipped with fused, or PTC-protected outputs that are individually selectable to provide necessary power for a wide range of access control panels, door locks, ancillary devices and more. Models also feature bi-color LEDs for instant visual voltage verification and embedded LINQ™ network power management technology, allowing users to control, monitor and report power over individual outputs. Additional features include: Stackable sub-assemblies; supervised fire alarm disconnect; low power cutoff; and more. Altronix products are NDAA and TAA compliant, made in the USA and carry a lifetime warranty.

Surge Protector for Fire Alarm Systems from Ditek

Ditek's DTK-120X12 is an electrical surge protection solution for fire alarm systems that combines protection for 120V system power with protection for up to 12 low voltage circuits to eliminate unnecessary damage caused by electrical surge events. This unique and compact new combination simplifies implementation of comprehensive surge protection for critically important fire alarm systems while providing for remote monitoring of surge protection status using dry contacts. The convenient, modular plug-in design simplifies installation and allows for easy replacement when needed. The product's base is designed to be wall mounted and hardwired, and includes the 120VAC power surge protection unit with dry contacts for remote monitoring of surge protection status.

Gunshot Detection by SDS: Automate the Alarm for Active Shooters

The Guardian Indoor Active Shooter Detection System from SDS incorporates the world's finest acoustic gunshot identification software and combines it with infrared gunfire flash detection to produce the highest performing, fully automatic, and most accurate gunshot detection technology available.

Guardian simultaneously detects gunfire and immediately relays this information via a floor plan map with shot location while simultaneously sending shot location information via text, email, and other notification pathways to those in harm's way. It is the only DHS SAFETY Act-certified Gunshot Detection System.

Sensor Features: Proven acoustic and infrared detection technology filters out false alerts; immediate detection and reporting; low caliber (.22) to high power weapons detection; Built-in-Self-Test (BIST) of internal acoustic and infrared sources; continuous heartbeat messages; patented handheld testing device.

Additional Wireless Features: Proprietary lithium battery pack; long range wireless capability; Aub-1GHz comms channel; AES encryption.

Guardian sensors and software are continuously updated with the latest security and communications features that customers demand from IoT devices. Guardian consistently passes rigorous information security and penetration testing by Fortune 100 and FedGov customers and is performance-certified at the highest levels by U.S., U.K. and Australian authorities on anti-terrorism technologies. SDS is now a part of the Alarm.com family. Call 1-844-SHOT911 or visit the links below for more details.

Concealed Gun Detection Solutions from Athena Security

Athena Security's Concealed Gun Detection System leverages two 384-pixel thermal cameras to capture both the back and front of someone's body. The thermal imaging cameras convert the energy in the infrared wavelength into a visible light display. When there is a concealed object under a person's clothing, the thermal camera can possibly see the object, if the temperature differentiation is greater than the sensitivity of the imager. This technology is reliant on the difference in temperature of the object vs radiant infrared thermal emanating from the body printing on the clothing.

ACOEM Gunshot & Acoustic Threat Detection

Compact and lightweight, ACOEM Gunshot & Acoustic Threat Detection modules are easy to install and integrate with existing or new visual monitoring equipment in public spaces. Within a matter of hours, individual monitoring devices or a network of modules can be installed and connected to a communication network. Wireless and battery/solar panel powering options are also available.By integrating sound with sight, the threat detection monitor automatically pinpoints acoustic incident zones within a matter of seconds, significantly increasing detection, identification and visualization of the threat in real time.

Maximum Security Turnstile (MST-TE) from Alvarado

Alvarado now offers North America's most specified and used maximum security turnstile in a 100% touch-free, motorized version. After presenting a valid entry credential, the turnstile unlocks, and an overhead sensor detects the user as they enter. Rotation begins automatically, eliminating the need for the user to touch and push their way through the turnstile.

Upon exit, the rotation cycle completes and relocks, ready for the next user. The result is a smooth and secure, completely contactless entry and exit passage.

The touch-free MST-TE is used for hygienic, high-security entry control in corporate, industrial, critical infrastructure, government, and military installations. Applications include employee and visitor touch-free access control, perimeter and fence line security, unattended entry points, time-and-attendance integration, and one way exit control.

Touch-free field kits are also available, allowing facilities to easily add touch-free functionality to installed/existing Alvarado full height turnstiles.

For more information on the MST-TE and other touch-free solutions from Alvarado, contact sales@alvaradomfg.com or visit the links below.

DKS Cloud Programming and 6006 Swing Gate Operator

Copper phone lines are being phased and using a dedicated PC to program your access control system is outdated. Get the latest and most reliable digital connection with DKS Ethernet or Cellular voice and data for your DKS access control systems. Take it to the next level with DKS Cloud Programming, the most advanced account manager available. Now your Entry System account settings are accessible from any computer, tablet, or smartphone with an internet connection – and it's perfect for management teams.

Take a look at our newest addition to our vehicular gate operator line! The DoorKing model 6006 is a versatile swing gate operator system that can operate gates up 1600 lbs. or up to 18 ft. in length, making it ideal for both residential and light duty commercial applications. The actuator can be left or right hand mounted and can be set for pull to open or push to open operation. The built-in magnetic limits are easily adjustable without having to remove the actuator housing. The 6006 system can be powered with 115 VAC or 24 VDC solar and is equipped with built-in battery backup. The 6006 is American made; designed and built at DoorKing's manufacturing facilities in Inglewood, CA.

INSTALLATION TOOLS

Trine's 4850ITL Electric Strike Installation Tool

Trine Access Technology has developed the ultimate tool for installing electric strikes used with rim panic devices. As with all Axion strikes from Trine, this tool was designed to install the entire 4800 series line of strikes quickly and accurately the first time making the best installation available today.

The 4850ITL is not just a template, it is made from actual production parts giving the installer the ability to adjust for common door issues such as sagging and misalignment. By placing the ITL on the frame, it allows the installer to "feel" the strike working with the door and panic device allowing for fine adjustments before holes are drilled.

The flexibility and therefore accuracy of the 4850-ITL is derived from our patent pending magnetic holding system built into the body of the tool.

Combine this with a custom center punch that is included with every 4850-ITL used to make perfectly centered marks on the frame, this tool is a must for every installer of electric strikes. See the video by searching "4850ITL" on Youtube!

Vehicle Ladder Racks from Ranger Design

Ranger Design's new line of Ladder Racks for vehicles includes the Low Roof Max Rack and the Cargo Rack (pictured), as well as a new Clamp Rack and Combination Rack, which will be available this summer. The Clamp Rack innovates with its inside hooks that guide the ladder during loading and unloading. All ladder racks have a compatible modular design, meaning racks can be upgraded simply by purchasing an extra part. This eliminates the need to replace the entire rack, saving customers both time and money.
