Theia Technologies' Family of Ultra Wide No Distortion Lenses

Lenses made with Theia's patented Linear Optical Technology® are designed to cover wide areas without barrel or fisheye distortion. This innovative technology offers an ultra-wide field of view while using all optical distortion correction to remove barrel distortion without using software, avoiding the resolution compression common in fisheye style lenses and the latency inherent in software correction.

The technology provides increased resolution at the image edge compared to other wide-angle lens technologies, improving the ability to identify, quantify, and characterize objects. Wide angle lenses can reduce the number of cameras required to cover an area, reducing cost of installation, maintenance and monitoring.

The technology enables lenses with up to 135 degrees HFOV and 120 degrees VFOV with 5+ megapixel 200+lp/mm resolution and includes near IR corrected models with very low focus shift, maintaining high resolution for Day/Night cameras. The family of lenses includes 3 models, including 2 fixed focal length and one varifocal model for fine tuning field of view.

The lenses are available in manual or DC auto iris versions, in CS or C mount.

For more information, visit the links below, or email info@theiatech.com for pricing and availability.

Tested and Proven Security Doors from Krieger

Krieger products are custom-manufactured to meet today's security needs and multiple performance requirements – including acoustical, bullet and blast resistance, forced entry, radio frequency shielding, and more.

Acoustical with Built-In Bullet Rating – Krieger's acoustical doors create a space free of unwanted noise with a rating of up to STC 55. The bullet resistance rating UL 752 enhances safety, and the doors can be manufactured with blinds between the glass for added safety in the event of an active shooter – both vital components of the Partner Alliance for Safer Schools (PASS) guidelines.

Forced Entry – Krieger's forced entry door excelled while being tested to the U.S. Department of State's SD-STD-01.01 Forced Entry Ballistic Resistance of Structural Systems standard. The door's core successfully stopped rounds of 7.62 mm from a NATO rifle firing 150 gr. full metal jacket ammo, and it withstood attacks to the center, edge, and hinges using sledgehammers, battering rams and more for over 75 minutes.

705 SCIF Door and Lock Package – This complete package arrives at the job site in 15-20 working days with the majority of hardware installed. Locking device options are available from Lockmasters and Sargent and Greenleaf. Package comes with door, frame, hinges, closer, locking device, threshold, door bottom, and seal system. It is 100% ICD 705 certified and meets SCIF Sound Groups 3 and 4 standards.

AirAccess Cellular Cloud-Based Access Control from Alarm Lock

New from Alarm Lock, AirAccess™ is a scalable, cellular, cloud-based ecosystem that is easy to install and operate.

There is nothing extra to buy and no software to load or upgrade.

It can be used with the entire field-proven family of Alarm Lock Networx wireless locks, including Trilogy Networx® and Designer ArchiTech™ series. Or, use AirAccess with wireless NetPanel and standard IDs and readers.

AirAccess uses proven, class-leading StarLink cellular technology, on either AT&T or Verizon LTE networks, for the broadest nationwide coverage.

AirAccess is virtually wire-free from the cloud to the door. Other features and benefits include:

- Easy to install and operate, cloud-based access locking systems, with easy-to-connect cellular communication
- No Connection to customer's IT system
- Generates incremental RMR for dealers
- Saves end-user accounts the need to devote resource to an on-premise access system

Triton FH-Series Multispectral Fixed Cameras from Teledyne FLIR

Triton FH-Series ID are ruggedized, multispectral fixed cameras that integrate industry-leading thermal imaging for detection with 4K visible imaging to help identify intruders in harsh perimeter security settings.

Critical infrastructure facilities will benefit from technological advancements such as highly-accurate convolutional neural network (CNN)-based video analytics for both thermal and visible spectrums, which minimize false alarms and aid in geo-locating threats for superior situational awareness.

An on-board scheduling tool gives operators the ability to select the type of analytics used to make detections based on time of day, business hours and seasonality.

Additionally, radiometric versions of the Triton FH-Series (FH-Series R) can be used for early fire detection applications to help critical sites operate safely and efficiently.

Part of the Teledyne FLIR premium Triton family of cameras, the Triton FH-Series delivers both intrusion detection and video verification through its high-resolution thermal and visible imaging capabilities. These features, plus the ability to capture vital details using 4K imagery, enables security personnel to properly identify and assess situations, significantly improving response time.

To learn more about the Triton FH-Series ID, visit www.flir.com/FH-Series-ID

To learn more about the Triton FH-Series R, visit www.flir.com/FH-Series-R

AirAccess®

Introducing the 1st New Revolutionarily-Easy, Cellular-Based, RMR-Generating Access Control System

The Fastest, Easiest Wireless Access Control System Today's Small/Medium Business Accounts Need & Will Pay More to Love

MAKE MORE MONEY

Build Business from SMB Accounts: 2X the RMR in a fraction of the time. Provide Hosted Access Control &/or Real-Time Monitoring from one simple, scalable, easy-to-bid system with unbeatable flat rate **as low as $19.95/month/system**

EASIER & FASTER TO INSTALL

Cellular communications *with leading StarLink® Technology,* make direct connections for you, outside your customers' network/IT Dept. Cloud-based software auto-learns system devices, i.e., Top-Rated wireless locks, panel & radio– **Minimal Training – it's purely plug and play.**

CUSTOMERS WANT 24/7 CONTROL FROM ANYWHERE

Easy Mobile App with built-in virtual, universal credential and customizable control of doors, locks, wiegand readers, users and more. SMS notifications provide peace-of-mind, keeping accounts connected and in charge of system status or emergencies at their business or office, **with little hardware investment, for lowest TCO.**

Detex Delayed Egress with Latch Retraction

Detex Corporation, an industry leader in life safety and security door hardware for commercial properties, is introducing an exclusive advancement in exit devices. Designed for applications such as law enforcement, airport, or health care facilities, where security is a high priority for protection of employees, visitors, patients and vendors, the patented Detex Delayed Egress with Latch Retraction device integrates both functions for more efficient operation.

The staff finds the practical Delayed Egress with Latch Retraction design well-suited to department routines – for example, controlling access to surgical suites from holding areas, or restricting entry to nursery areas or pharmacy facilities. They also appreciate the smooth pushpad, which doesn't snag on clothing or equipment.

The Delayed Egress with Latch Retraction device has no external magnets, electric strikes or electric trims. Everything is contained in the rim device, so there are fewer components to install, and fewer to malfunction and affect performance. Operation is simple: for authorized personnel, the latch retraction operates with the access control system, bypassing delayed egress to allow exit and entry without sounding the alarm. But unauthorized entry triggers a 100dB alarm and keeps the door locked for 15 seconds, allowing time for staff to respond. A fire alarm input provides life safety override for immediate exit during a fire emergency.

Detex is the first and only manufacturer with this combination of functions in one device.

Where Trust is Built™

BEST 9K Cylindrical Series from dormakaba

The BEST 9K Series from dormakaba is designed to be low-maintenance, easy to install, durable and secure. The 9K has been tested to exceed 10 times ANSI/BMHA Grade 1 criteria and has been independently tested to surpass 50 million cycles. The 9K ensures premium performance with superior materials, design and strength.

BEST 9K locksets are pre-assembled and fit most KIK and figure eight core systems, so you can keep your existing locks and keys.

Features include:

- Hardened steel through-bolt studs
- Quick and easy installation right out of the box
- Cast construction lock hub for durability
- Easily adaptable with no drilling or rekeying required
- Proven reliability through extensive testing
- ADA-compliant lever operation
- Premium performance and strength
- Available with visual indicator for clear lockdown confirmation

With proven quality, easy installation, and multiple durable finish options including antimicrobial. Whether you are installing one lock or 20, the BEST 9K will be the easiest upgrade you will ever make.

CLX3300 Series Cylindrical Lock from Corbin Russwin

Corbin Russwin's CLX3300 Series cylindrical lock is manufactured of the highest-quality materials to provide durability, strength and reliability in the most demanding, high-traffic spaces.

The highly anticipated premium bored lock is certified to surpass ANSI/BHMA Grade 1 requirements in some of the most challenging environments and offers superior vandalism resistance. The CLX3300 Series withstands 3,100 in-lbs of torque (2.6x requirement) while maintaining egress, prevents entry against 1,600 lbs. offset lever pull (8x requirement), prevents entry against 100 vertical impacts (20x requirement), and maintains latch retraction under 100 lb. preload (2x requirement), ensuring consistent operation in warped doors or doors with latch bind.

Available in 26 mechanical functions and 14 finishes, the CLX3300 Series supports all cylinder formats – from fixed to interchangeable core.

ANSI-ITL for the Best and Easiest Installation of Trine Electric Strikes

Trine's ANSI-ITL is the best way to install both 4-7/8" and 2-¾" Trine Electric Strikes. Lean and efficient, it utilizes only two pieces each (screwed together) for the 4-7/8" and 2-¾" cutouts, which means fewer lost parts. The Installation tool can be used with the 4100, 4100DBDL, 4200, EN400, EN435, EN430 electric strikes as well as 478, 478X, 234, and 234X installations on the 3000 series.

Adjustments on the installation tool allow for installation even on the lower cutout of the Schlage L series – for use with the 4100 and 4100 DBDL. Additionally, the tool includes a scribe pen for accurately marking the cutout lines on the frame. Two mounting screws for the tool is also included.

Please note the ANSI-ITL replaces the older 478-ANSI-ITL model number.

The ANSI-ITL is fast, easy, and accurate. Ask your distributor how you can get yours today.

Arrow Status Indicator Retrofit Kits For Best® & Schlage® Mortise Locks

Arrow is pleased to announce our new Retrofit Indicator Kits for existing Best® or Schlage® mortise locks. These kits offer a seamless upgrade to existing, competitor brand sectional mortise locks while offering better visibility if the door is locked or unlocked.

These kits are not only easy to install, but also have features such as the largest viewing window in the industry, support a variety of Best of Schlage functions, available for one or both sides of the door, and are UL/cUL classified for use on 3-hour doors using Schlage® L9000 or Best® 45H/34H/35H mortise locks. This product is ideal for use in restrooms, quiet rooms, nursing rooms, fitting rooms, and other areas requiring visual communication of use and assured privacy.

Competitor status indicator kits are currently available for order with standard lead times.

BEST Switch™ Tech Core from dormakaba

BEST Switch™ Tech Core replaces virtually any small format interchangeable core (SFIC) quickly and easily. Switch Tech creates new opportunities for access control for installations that were previously impossible and makes key management headaches a thing of the past.

Switch Tech replaces mechanical keys with a smart, secure plug-and-play digital technology activated through a mobile device or BLE fob.

- **Affordable.** Deploy Switch Core for roughly 10% the cost of hardwired access control
- **Simple.** Eliminates key management system (no more rekeying!)
- **Control.** Integrates with industry leading Access Control software platforms
- **Quality.** Durable design and construction
- **Quick.** Installs in minutes
- **Secure.** Generate and assign credentials as users change
- **Easy.** Keep your existing door hardware, just change out the core
- **Scalable.** Add doors as your access needs change
- **Customizable.** Multiple finish options including antimicrobial

Introducing the SALTO XS4 Original+

The XS4 Original+ is a universally compatible advanced smart locking system delivering next-generation access control technology in a market proven solution.

Featuring a sleek design, the XS4 Original+ is based on the same proven housing and mechanical mechanisms of the XS4 Original. It can integrate all your physical security needs through wireless networked, easy to install, stand-alone locks giving you real-time access control for virtually all the doors in your building.

The XS4 Original+ solution is suitable for a wide range of customer applications. The broad range of different models and functions provide comprehensive electronic access control to virtually any door.

SALTO BLUEnet real-time functionality and SVN-Flex capability are pre-embedded, enabling SALTO stand-alone smart XS4 Original+ locks to update user credentials directly at the door.

It is compatible with the wide array of SALTO platform solutions, including SALTO Space data-on-card, SALTO KS Keys as a Service cloud-based access solution, and SALTO's JustIn Mobile technology for digital keys.

The XS4 Original+ also includes RFID Mifare DESFire, Bluetooth LE, and NFC technology functionality.

MLR Z7600 Motorized Latch Retraction Mortise Locksets from SDC

SDC's MLR Z7600 Series Mortise Locksets are designed for the access control of openings in commercial, industrial and institutional facilities where code compliance, dependable operation and resistance to physical abuse is required. Ideal for automatic door operator applications, they replace most major brand mechanical locks in new or retrofit applications. MLR Mortise Locksets ensure the door stays latched even when unlocked, perfect for use on fire rated doors to maintain code compliance.

FEATURES

- Motorized low current operation 620mA inrush, 160 mA holding force @ 24VDC
- SDC Fully Featured Lockset with Complete Application Flexibility for New Construction or Retrofit of Major Brand Mechanical Locks
- New or Retrofit Application, Replaces Most Mechanical Locks
- Field Selectable Handing
- Order with SDC Trim or Less Trim. Compatible with Schlage Trim Provided by Others
- Key Cylinder Latch Retraction
- Full Monitoring Capability (Optional)
- Request-to-Exit, SPDT
- MC-4 Door Contact
- Latchbolt Status, SPDT

Yale Mortise Lock Status Indicators

Yale's newly designed occupancy/status indicator option for the Yale 8800 Series mortise lock provides security and safety at a glance. With the largest viewing window in the industry, a 180° visibility profile, reflective indicator materials, and more color and text/graphic combinations to choose from, the new status indicator options are versatile for any application, and provide assurance when you need it most.

Also, available with sectional and full escutcheon trim.

Status indicators are great for applications that require assurance of privacy or safety, such as restrooms, classrooms, nursing mothers' rooms, quiet rooms, and more. Multiple status indicator options and functions are currently available for order with standard lead times.

Typical Applications:

- Classroom doors
- Privacy rooms
- Nursing/new mother rooms
- Patient rooms
- Restrooms
- Meeting rooms

Sargent 10X Line Bored Lock

SARGENT's 10X Line bored lock is manufactured of the highest-quality materials to provide durability, strength, and reliability in the most demanding, high-traffic spaces.

The highly anticipated premium bored lock is certified to surpass ANSI/BHMA Grade 1 requirements in some of the most challenging environments and offers superior vandalism resistance. The 10X Line withstands 3100 in-lbs of torque (2.6x requirement) while maintaining egress, prevents entry against 1,600 lbs. offset lever pull (8x requirement), prevents entry against 100 vertical impacts (20x requirement), and maintains latch retraction under 100 lb. preload (2x requirement), ensuring consistent operation in warped doors or doors with latch bind.

Available in 26 mechanical functions and 14 finishes, the 10X Line supports all cylinder formats – from fixed to interchangeable core.

Norton 6300 Low Energy Door Operator with WiFi Programming Interface

The 6300 low energy door operator features one of the slimmest profiles in the industry, enabling it to fit into tight spaces while blending seamlessly with the door frame. Its modular design allows for one-person installation, for single and double door applications.

It also features the first-known programming interface offering step-by-step programming using any WiFi-enabled smart device – with no need to download an app. The 6300 WiFi interface makes it easy for facilities professionals to install and adjust at any time – no need to sign expensive installation and annual maintenance contracts.

Operator settings on one unit can be saved and ported over to other units for even faster setup and consistent operation across all doors.

This door operator features a modular design and includes a heavy-duty back plate that serves as a template to simplify and accelerate the installation process. The unit learns the door properties (approximate weight) during installation, so setup using a mobile device is easy. And to adjust settings, school personnel no longer need to set up a ladder and wrestle with the operator cover, they simply make adjustments using its WiFi interface.

Arrow E Series Status Indicator Deadbolt

The new and improved Arrow E Series status indicator deadbolt provides the ultimate in privacy assurance with bold visual indicators on BOTH the inside and outside of the door.

The Arrow E Series status indicator uses an emergency key override to unlock the door from the outside in case of emergency. When the deadbolt is in the locked position, an external slot is exposed that provides for the use of the override key.

This product is ideal for use in public restrooms, dressing rooms, nursing mothers' rooms and other areas requiring visual communication of use and assured privacy.

- Certification: ANSI A156.36, Auxiliary Locks, Grade 2
- Housing: Solid one-piece construction with decorative scalp.
- Thru-bolting: supplied with two ¼" (6.35 mm) steel thru-bolts.
- Deadbolt: 1" (25.40 mm), solid steel deadbolt throw with hardened steel pin insert.

Adams Rite Provides Versatile Solutions for Narrow Stile Aluminum Openings

Adams Rite is the Aluminum Hardware Authority, specializing in door and door hardware solutions for narrow stile aluminum applications. From electromechanical deadlocks and deadlatches to preload capable electric strikes and electrified exit devices and trim, Adams Rite offers practical and quality code-compliant solutions for retrofitting and upgrading interior and exterior aluminum and glass openings, adding access control to improve the safety and security of your business. Our products are available in multiple finish options to match almost any frame creating a sleek, aesthetic look. Find solutions for narrow stile aluminum openings on our website or follow Adams Rite on LinkedIn and Facebook.

Alarm Controls: Opening the Door to Affordable Access Control

Alarm Controls is your one-stop-shop for access control solutions at an exceptional value. Our offering of electromechanical products range from maglocks and accessories to push buttons and request to exit stations to specialty products for securing hazardous locations and supporting emergency panic stations. Our custom solutions program specializes in creating unique and versatile designs to meet your specific needs. From the perimeter of your property to the interior openings, Alarm Controls offers a full line of affordable access control products to fit every need and secure and control your opening, while maintaining a high level of customer service, quality and short lead times. From front gate to front desk we have your solution. Visit us online or follow Alarm Controls on LinkedIn and Facebook.

Yale D200 Series Deadbolt with Status Indicator

Yale Commercial Solutions is now offers improvements to Yale® D200 Series deadbolts with status indicators. These deadbolts will now provide a bold visual indicator on BOTH the inside and outside of the door as a standard feature to communicate the door status while providing ultimate privacy assurance.

In addition to large indicator windows, optional colors, wording, and symbols, a new, oversized thumbturn will be provided as part of the standard offering for increased ease of use. This product is ideal for use in public restrooms, dressing rooms, nursing mothers' rooms and other areas requiring visual communication of use and assured privacy.

Yale® D series deadbolts are the ideal choice for a wide variety of commercial applications where consistent quality, ease of use and installation are required.

Features include:

- ANSI/BHMA Certified Grade 1 or 2, depending on model
- Available with visual occupancy indicators, displaying "In Use" or "Vacant" that displays current status of the deadbolt
- 1" throw solid steel deadbolt with hardened, free spinning steel pin insert
- Non-handed functions are easily field reversible
- 2-¾" backset
- Several SFIC functions feature concealed interior screws that only the control key can access

HES ES100 Series Wireless Electric Strikes

The HES ES100 Series Wireless Electric Strikes make retrofitting an opening with online access control simple and affordable.

For the first time, the industry-leading features of the HES 1500 and 1600 series electric strikes have been paired with Aperio® wireless technology to provide even more affordable access control retrofit options for remote control and monitoring.

Available in both Convenient (non-monitored) and Secure (monitored) model options. Compatible with most models of cylindrical and mortise latchbolt locksets, including 1-inch deadbolts. Simply put, the ES100 Series Electric Strike is the affordable universal retrofit solution that offers flexible configuration options and dynamic adjustability without the need to run wires to every door.

The strike supports HID multiCLASS SE® card technologies, as well as NFC & BLE mobile credentials.

Other features include: Battery operated for stand-alone operation; Fail secure operation (standard); interchangeable faceplates and accessories; integrated locked state and tamper monitoring; field adjustable integrated shim for changing door conditions; fully finished faceplate, keeper, case, trim, and strike body; stainless steel construction and more.

ACCESS CONTROL & DOOR HARDWARE

Touch-Free VoIP Entry Phones from Viking Electronics

Viking's new Touch-Free IP Entry Phones are equipped with a built-in motion sensor. Simply wave your hand in front of the sensor to place a call. The no-contact operation eliminates exposure to germs and bacteria from typical pushbuttons. The entry phones provide quick and reliable communication for SIP VoIP phone systems with PoE. They can be programmed from any touch tone phone, PC, or remotely using a static IP address. The phones can dial up to 5 programmable rollover numbers, and feature a bright LED that is blue when the phone is idle, and lights green when a call is activated. The Touch-Free Entry Phones feature on-board 2 Amp relay contacts for activating doorstrikes or gate controllers. Three different chassis styles are available.

M1 Security & Automation Controls from ELK Products

Are you searching for a new security control? It is time to discover M1 Controls from ELK. M1 is a rock-solid security and life safety system with comprehensive detection capabilities and flexible reporting options via telephone, IP, and/or cellular pathways. Programming M1 is easy! English text menus guide installers through keypad programming, eliminating the need to learn complicated programming codes. The ElkRP2 software makes it even easier with multiple-choice dropdowns, checkboxes, and text fields. M1 combines security with smart automation and flexible integration for intelligent scheduling and control of lights, thermostats, locks, water valves, and more. Superior encryption and multi-level authentication ensure secure remote connectivity so users can safely control the M1 from popular smart devices.

Elara R-Series Commercial Ground Security Radar from Teledyne FLIR

The Elara R-Series from Teledyne FLIR introduces compact ground radars built to work within larger security systems to provide advanced warning of both human and vehicle intrusions beyond the fence line, while continuously tracking and precisely locating multiple targets.

This series consists of two models, each designed with regional certifications in mind: the Elara R-290, which is compliant with United States Federal Communications Commission (FCC) guidelines, and the Elara R-190, which is Conformité Européenne (CE)-compliant for Europe.

The Elara R-290 features a 90-degree field of view, up to a 400-meter range for vehicle tracking, a 200-meter range for human tracking, and provides wide-area protection as well as situational awareness; the Elara R-190 offers a 300-meter range for vehicles and 125 meters for humans.

These products are designed for reliable detection in all weather and lighting conditions. The radars' auto-tracking feature helps to direct pan-tilt-zoom sensors in the right direction; the radars also help expand coverage area and significantly minimize false alarms. In addition, both models can provide security personnel with precise, real-time data, 24/7.

The Elara R-Series radar is the ideal commercial radar system for industrial commercial applications, increasing detection coverage, auto-tracking, dynamic mapping and position intelligence of intruders.

DKS Cloud Programming and 6006 Swing Gate Operator

Copper phone lines are being phased out, and using a dedicated PC to program an access control system is outdated. Get the latest and most reliable digital connection with DKS Ethernet or Cellular voice and data for your DKS access control systems. Take it to the next level with DKS Cloud Programming, the most advanced account manager available. Now your Entry System account settings are accessible from any computer, tablet or smartphone with an internet connection – and it is perfect for management teams.

The new DoorKing model 6006 is a versatile swing gate operator system that can operate gates up to 1,600 lbs. and/or up to 18 ft. in length, making it ideal for both residential and light-duty commercial applications.

The actuator can be left- or right-hand mounted and can be set for pull-to-open or push-to-open operation. Built-in magnetic limits are easily adjustable without having to remove the actuator housing. The 6006 system can be powered with 115 VAC or 24 VDC solar and is equipped with built-in battery backup. The 6006 is American made; designed and built at DoorKing's manufacturing facilities in Inglewood, CA.

Triton FH-Series Multispectral Fixed Cameras from Teledyne FLIR

Triton FH-Series ID are ruggedized, multispectral fixed cameras that integrate industry-leading thermal imaging for detection with 4K visible imaging to help identify intruders in harsh perimeter security settings.

Critical infrastructure facilities will benefit from technological advancements, such as highly-accurate convolutional neural network (CNN)-based video analytics for both thermal and visible spectrums, which minimize false alarms and aid in geo-locating threats for superior situational awareness.

The on-board scheduling tool gives operators the ability to select the type of analytics used to make detections based on time of day, business hours, and seasonality. Additionally, radiometric versions of the Triton FH-Series (FH-Series R) can be used for early fire detection applications to help critical sites operate safely and efficiently.

Part of the Teledyne FLIR premium Triton family of cameras, the Triton FH-Series delivers both intrusion detection and video verification through its high-resolution thermal and visible imaging capabilities. These features plus the ability to capture vital details using 4K imagery enables security personnel to properly identify and assess situations, significantly improving response time.

Senstar's Sensor Fusion Analytics Engine

Senstar's sensor fusion engine synthesizes data from multiple perimeter sensors to generate actionable information.The product accesses low-level data to intelligently characterize potential risks, and data synthesis enables the system to achieve levels of performance that exceed those of the individual sensors. For security applications, this has direct, practical benefits – namely the ability to maximize the strengths of individual sensor technologies while avoiding their shortcomings. Driving the sensor fusion engine is the Senstar Symphony Common Operating Platform, a modular solution for security management and data intelligence. In addition to being an open, highly scalable video management system with built-in video analytics, it includes full-featured access control and perimeter intrusion detection modules.

WallAlert Intrusion Detection System from RBtec Perimeter Security Systems

The WallAlert Intrusion Detection System from RBtec Perimeter Security Systems detects vibrations caused by attempts to disturb solid structures, including fixed warehouses, bank vaults, safes and perimeter walls. The system offers a higher level of protection and false alarm immunity than traditional shock sensors, which often lack the ability to discriminate between ambient vibration and real attacks. The product's sensor cable is an ideal system for all types of walls and drywall for detecting mechanical vibration transmitted along the wall as an intruder attempts to break through.

Theia Telephotos for High Detail: Compact was Never so Powerful!

Theia's SL940 9-40mm and SL1250 12-50mm telephoto lenses provide high performance at up to 5 megapixel and 4k resolution respectively for up to ⅓.3" and 1/1.7" sensors. These telephoto varifocal lenses allow the user to optimize the field of view to zoom in on an area of interest far away with 4X zoom capability and then digitally zoom in up to 16X while still maintaining better than SD image resolution.

Theia telephoto lenses are excellently IR-corrected to work with true Day/Night cameras, maintaining crisp resolution in near IR light. At only 50mm or 52mm long and 54mm in diameter, the lenses are very compact for telephotos, facilitating fit in some 4" domes, bullets, and tight spaces.

The combination of high resolution performance, excellent IR correction, and compact size make them ideal for high detail applications such as License Plate Recognition and traffic monitoring.

The lenses are available in DC Autoiris, P-iris, and Manual iris versions in CS mount. Also offered in fully motorized versions with board mount and NIR bandpass and notch filters available on some models.

For more information, visit the links below, or email info@theiatech.com for pricing and availability.

Theia Technologies' Family of Ultra Wide No Distortion Lenses

Lenses made with Theia's patented Linear Optical Technology® are designed to cover wide areas without barrel or fisheye distortion. This innovative technology offers an ultra-wide field of view while using all optical distortion correction to remove barrel distortion without using software, avoiding the resolution compression common in fisheye style lenses and the latency inherent in software correction.

The technology provides increased resolution at the image edge compared to other wide-angle lens technologies, improving the ability to identify, quantify, and characterize objects. Wide angle lenses can reduce the number of cameras required to cover an area, reducing cost of installation, maintenance and monitoring.

The technology enables lenses with up to 135 degrees HFOV and 120 degrees VFOV with 5+ megapixel 200+lp/mm resolution and includes near IR corrected models with very low focus shift, maintaining high resolution for Day/Night cameras. The family of lenses includes 3 models, including 2 fixed focal length and one varifocal model for fine tuning field of view.

The lenses are available in manual or DC auto iris versions, in CS or C mount.

For more information, visit the links below, or email info@theiatech.com for pricing and availability.

Theia Technologies' Award-Winning 4K Lens Family

Theia's family of 4K lenses provides full 12 megapixel 300 lp/mm resolution performance for the most demanding applications such as ANPR/LPR, traffic monitoring and analytics.

Two lenses cover a horizontal field of view of 7 to 112 degrees, with the SL/TL410 lens providing a 4-10mm focal range, while the SL/TL1250 telephoto lens offers a 12-50mm focal range. Both have excellent IR correction with less than a 5µ focus shift in Near IR light for superior Day/Night performance. At *f*/1.4 the SL/TL410 lens offers excellent light gathering ability in low light conditions. The lenses are designed to cover the larger 1/1.7" 4K image sensors while at the same time resolving the smaller 1.55µ pixels of the ⅓.3" 4K sensors.

Measuring only 52mm long (64.5mm TTL) they are the most compact of comparable 1/1.7" format 4K lenses available on the market to facilitate use in domes, bullets, small enclosures, as well as on box cameras. Both lenses feature a slip ring mount that allows the user to position thumb screws for convenient access to focus and focal length adjustments post-installation on the camera.

The lenses are offered in manual, DC Auto, or Precise iris versions, and CS or C mount depending on the model.

For full specifications, drawings and CAD files, visit the links below, or email info@theiatech.com for pricing and availability.

Evolv Express Weapons Detection System from Evolv Technology

Evolv Technology is transforming physical security, enhancing the attendee, student and employee experience without sacrificing safety. Using advanced sensors, cameras and artificial intelligence, Evolv Express differentiates personal items from concealed threats so visitors can walk through without breaking stride or handing over their belongings. When the system alarms, an easy-to-use tablet displays an image of where on a person or their bag a potential threat has been detected, streamlining issue resolution. Venues realize visitor flow rates 10 times faster than metal detectors, improving guest experience, guard retention rates, and operational efficiencies – without compromising physical security. With its companion analytics application, Evolv Insights, Evolv Express improves evidence-based security and operational planning, providing metrics including visitor flow curves, alarm rates, threat types and event KPIs.

UVIS from Advanced Detection Technology

Advanced Detection Technology's LowCam VI100 system is a battery-powered Under Vehicle Inspection System (UVIS) for security at special events. With no cables or cords and military-grade equipment, security personnel can set up and use the system within minutes, without highly trained or specialized personnel. Using an intuitive interface, the system identifies anomalies by displaying ultra-high definition images with side-to-side daylight view and 15X zoom capabilities. Its 6-cell lithium polymer (LiPo) battery can typically last between four and six hours, with plenty of time to scan vehicles for the safety and security of your event and its patrons.

Mail & Package Scanners from RaySecur

MailSecur 3D desktop mail and package scanners from RaySecur use millimeter wave (mmWave) technology to "see inside" of objects for precise and detailed detection. Its screening technology intercepts and detects mail and package threats including explosives, liquids, powder, weapons, radiation, and other suspicious contents. It is the first mail scanner to receive Department of Homeland Security (DHS) designation as a Qualified Anti-Terrorism Technology (QATT) under the DHS Safety Act.

Enhanced NetWay Power Supplies from Altronix

Altronix's enhanced line of NetWay products are designed to accommodate 802.3bt PoE cameras, illuminators, locking devices, LED lighting and more. New IEEE 802.3bt compliant midspans and hardened PoE switches provide up to 90W per port, accommodating both fiber or structured cable. Models are available in a variety of single and multi-port configurations for indoor or outdoor applications. NetWay products provide system designers/installers with maximum versatility and cost-efficiency when integrating networked surveillance systems. Additional features include built-in battery charging with SLA or Lithium Iron Phosphate options, as well as embedded network power management to control, monitor and report diagnostics or reset devices remotely. Altronix products are NDAA and TAA compliant and carry a lifetime warranty.

Modular Surge Protection Solutions from Ditek

Ditek's DTK-VM2 and DTK-VM2T Series modular surge protection solution offers 4, 8, and 24 channel enclosure options that accept a wide array of rapid-replacement modules designed to protect any combination of signaling, data and low-voltage power circuits from 5V up to 130V. All of the enclosures in the series accept modules equipped with either RJ45 or screw terminal connections, and all feature single point grounding for simple and fast installation and service. The solution simplifies implementation of comprehensive surge protection for all kinds of critical electronic systems, including surveillance, access control, fire, fuel dispensing, point-of-sale, communications, industrial controls, audio and more.

Platinum Tools NetXpert XG2 10G Network Tester

The NetXpert XG2 from Platinum Tools provides 10G speed certification over copper and fiber, and complete network testing over copper, fiber and Wi-Fi systems. With Cat6A rapidly gaining dominance, a tester capable of certifying networks to 10G speeds has become more of a necessity. For future upgradeability, new firmware is able to be loaded by the end-user via USB or Wi-Fi. Other features include: Cable qualification to IEEE standards; PoE testing up to 90W (PoE type 4); complete reporting in multiple formats; full-color seven-inch touchscreen; and a rechargeable, upgradeable lithium battery pack.

BoonSelect Mapping and Planning Tool from Boon Edam

Being responsible for making the decision to implement new security turnstiles or revolving doors at a facility can be a challenge. Security and Facility Managers are responsible for the safety and security of all who enter a campus or facility via its entrances. And each entrance location has a different set of users, traffic levels, security requirements, environmental requirements, etc. Boon Edam's solution mapping tool, BoonSelect, breaks down the complex entry selection process and helps decision makers choose the right entrance solutions for their unique goals. The software features seven factors to consider prior to making an entrance decision: Throughput, security, safety, aesthetics, technology, comfort and service.

Speed up installations with these new solutions.

Whether you're renovating high-traffic entryways or putting in new frames and doors, you want your job to go faster and easier. Now there are three ways to simplify installing SELECT geared continuous hinges:

HB375 DRILL BIT

No center punch needed. SELECT's .375-inch drill bit is designed specifically to speed up installation of our geared continuous hinges.

PIVOT HINGE HOLE COVERS

Instant improvement. Mask the unsightly holes left by previous pivot hinge preps with SELECT's self-adhesive covers. Block out insects, dirt and water, too.

SHIM STOCK

Make invisible adjustments. Square up doors and frames without ruining their appearance. SELECT's shim stock comes in clear anodized aluminum strips or 100-foot rolls of translucent UHMW.

SimpleK Key Management System from Medeco

SimpleK from Medeco is a flexible and intuitive software program that streamlines and simplifies the complexities of master key systems and key management. Institutional locksmiths, security personnel, facility managers, and others involved in key control use this electronic, scalable tool to manage keys and keying systems of all sizes.

SimpleK has several features to make key and facility management easy, while allowing for total key control. The security features allow you to control user permissions, data access, and provide an audit trail on transactions such as approvals, issuances, returns, and rekeying.

SimpleK's flexible software allows you to import maps and floor plans so you can see who has access to each individual door, the associated keys, and hardware on the opening. Along with its robust import tools, what sets SimpleK apart are its master keying features, advanced workflow options, and scalability. You can manage an unlimited number of records.

SimpleK manages virtually every key system, including Medeco, Corbin Russwin, Yale, SARGENT, ASSA, ABLOY, Schlage, Best, and many others.

The software also offers solutions for:

- Master key system design and management
- Key requests, key issuance, and door-key association visualization
- The ability to track items such as laptops, phones, vehicles, and other equipment
- Cylinders and core pinning
- Buildings, doors, and dynamic floor plans

Trine's 4850ITL Electric Strike Installation Tool

Trine Access Technology has developed the ultimate tool for installing electric strikes used with rim panic devices. As with all Axion strikes from Trine, this tool was designed to install the entire 4800 series line of strikes quickly and accurately the first time making the best installation available today.

The 4850ITL is not just a template, it is made from actual production parts, giving the installer the ability to adjust for common door issues such as sagging and misalignment. By placing the ITL on the frame, it allows the installer to "feel" the strike working with the door and panic device allowing for fine adjustments before holes are drilled.

The flexibility and therefore accuracy of the 4850-ITL is derived from our patent pending magnetic holding system built into the body of the tool.

Combine this with a custom center punch that is included with every 4850-ITL used to make perfectly centered marks on the frame, this tool is a must for every installer of electric strikes. See the video by searching "4850ITL" on YouTube!

KEYS, KEY CONTROLS & AUTOMOTIVE

Medeco Intelligent Key Cabinet

No matter what type of keys your facility uses, the Intelligent Key Cabinet (IKC) from Medeco securely stores, distributes, and tracks every key so your facility is never at risk.

IKC is an electronically controlled key management system that increases accountability and efficiency, and essentially eliminates the risk of misplaced keys.

- **Increase Efficiency**: Authorized personnel can "self-serve"/retrieve keys without an administrator by accessing keys via biometric fingerprint, PIN, and/or Prox Card. The built-in LCD screen guides authorized personnel through the entire process.
- **Increase Oversight**: Know who has keys, which keys they have, and when keys are returned.
- **Increase Awareness:** Alerts for unreturned keys ensure keys never leave the facility without an audit trail, limiting exposure to loss or theft.
- **Increase Security**: Multiple-factor authentication available to access the cabinet. The IKC comes with a built-in camera for security photo capture.
- **Increase Intelligence**: Identify potential problems in key removal and return before they escalate. A complete reporting suite and real-time data shows trends in activity.
- **Increase Your Options**: Multiple configurations available for different types of keys or assets. When combined with the Medeco XT Intelligent Key System of electronic locks, the XT configuration allows you to see which openings were accessed and when.
